IKO Mechatronics Series
General Catalog

CAT-1562E

NIPPON THOMPSON CO., LTD. (JAPAN)

Head Office : 19-13 Takanawa 2-chome Minato-ku
Tokyo 108-8586, Japan
Phone : +81 (0)3-3448-5850
Fax : +81 (0)3-3447-7637
E-mail : ntt@ikonet.co.jp
URL : http://www.ikont.co.jp/eg
Plant : Gifu, Kamakura

IKO-THOMPSON (SHANGHAI) LTD. (CHINA)

Shanghai (Sales Head Office)
1608-10 MetroPlaza No.555 LouShanGuan Road
ChangNing District Shanghai
People's Republic of China 200051
Phone : +86 (0)21-3250-5525
Fax : +86 (0)21-3250-5526
E-mail : ntc@ikonet.co.jp

Beijing Branch
Room1506, Jingtai Tower,
NO.24, Jianguomenwai Avenue,
Chaoyang District, Beijing People's Republic of China 100022
Phone : +86 (0)10-6515-7681
Fax : +86 (0)10-6515-7681*106
E-mail : ntc@ikonet.co.jp

Guangzhou Branch
Room 834, Garden Tower, Garden Hotel
368 Huanshi East Road, Yuexiu District, Guangzhou, Guangdong
People's Republic of China 510064
Phone : +86 (0)20-8384-0797
Fax : +86 (0)20-8381-2863
E-mail : ntc@ikonet.co.jp

Wuhan Branch
Room 2300, Truroll Plaza No.72 Wusheng Road,
Qiao kou District, Wuhan, Hubei
People's Republic of China 430033
Phone : +86 (0)27-8556-1610
Fax : +86 (0)27-8556-1630
E-mail : ntc@ikonet.co.jp

Xi'an Office
Room 605, Zhongcai Finance Building,
No.22 Hepin Road, Beilin District, Xi'an City, Shanxi Province,
People's Republic of China 710001
Phone : +86 (0)29-8882-3225
Fax : +86 (0)29-8882-3215
E-mail : ntc@ikonet.co.jp

Shenzhen Office
Room 420, Oriental Plaza,
1072 Jianshe Road, Luohu District, Shenzhen, Guangdong
People's Republic of China 518001
Phone : +86 (0)755-2265-0553
Fax : +86 (0)755-2298-0665
E-mail : ntc@ikonet.co.jp

Chengdu Office
Room 604 of Tower5, Weima Plaza,
No.2 Gaopan Rd, Wuhou District, Chengdu, Sichuan,
People's Republic of China 610041
Phone : +86 (0)28-6250-5159
Fax : +86 (0)28-6250-5159
E-mail : ntc@ikonet.co.jp

Ningbo Office
Room 3406, Zhongnongxin Building, No.181
Zhongshan East Road, Haishu Ward, Ningbo, Zhejiang
People's Republic of China 315000
Phone : +86 (0)574-8718-9535
Fax : +86 (0)574-8718-9533
E-mail : ntc@ikonet.co.jp

Qingdao Office
2107 Block A, World Trade Center Building, No.230
Changjiang Middle Road, Development Zone Qingdao
People's Republic of China 266555
Phone : +86 (0)532-8670-2246
FAX : +86 (0)532-8670-2242
E-mail : ntc@ikonet.co.jp

Shenyang Office
2-1203 Tower I.City Plaza Shenyang, No.206
Nanjing North Street Heping District, Shenyang
People's Republic of China 110001
Phone : +86 (0)24-2334-2662
FAX : +86 (0)24-2334-2442
E-mail : ntc@ikonet.co.jp

Recognizing that conservation of the global environment is the top-priority challenge for the world's population, Nippon Thompson will conduct its activities with consideration of the environment as a corporate social responsibility, reduce its negative impact on the environment, and help foster a rich global environment.

ISO 9001 & 14001 Quality system registration certificate

ISO 9001 Certified ISO 14001 Certified

Good Environment and Good Quality

IKO Precision Positioning Table is a product brought out from an integration of the linear motion rolling guide technology, which we have developed for many years, and the state-of-the-art technology in microelectronics.

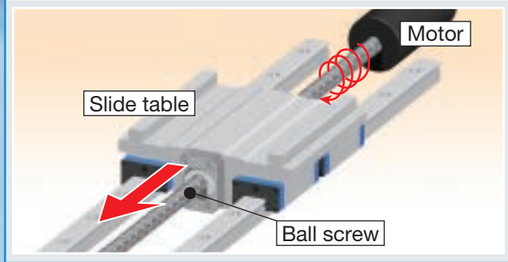
IKO Precision Positioning Table is composed of many leading-edge components carefully chosen to meet stringent needs. In the table guiding parts in particular, IKO linear motion rolling guide, which has been well proven in the fields of super precision machines and machine tools, is incorporated to make full use of their high potentials.

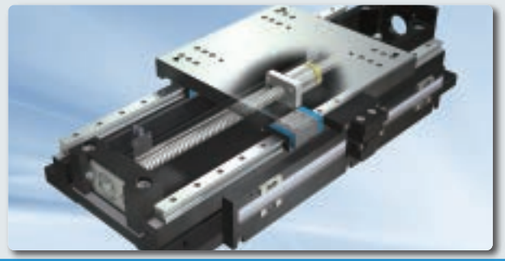
IKO Precision Positioning Table has proven its excellent performance through a wide range of applications as a positioning mechanism for the state-of-the-art LCD and semiconductor manufacturing facilities such as a variety of measuring equipments, processing machines, and assemblers.

IKO Types and Characteristics of Mechatronics Series

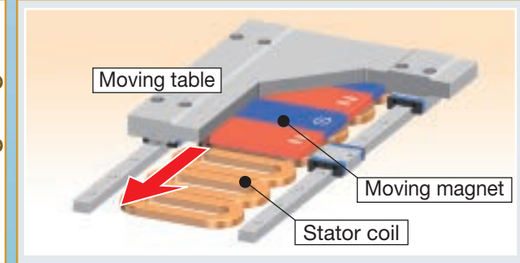
Types of Mechatronics Series

Ball screw drive

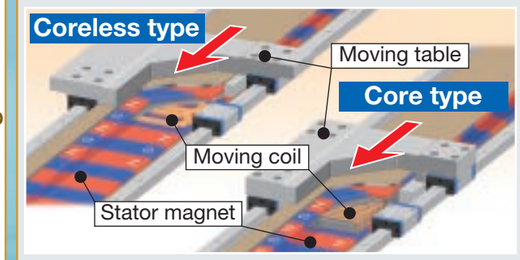




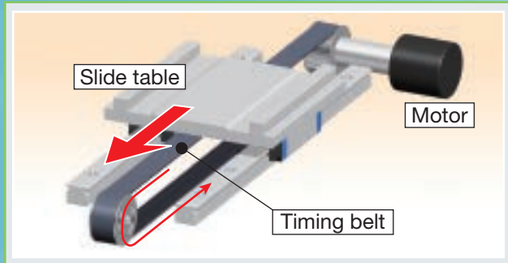
Linear motor drive — Moving magnet

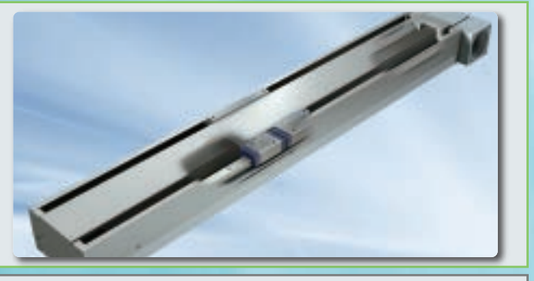


Linear motor drive — Moving coil

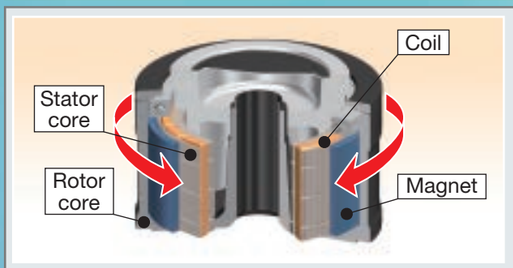


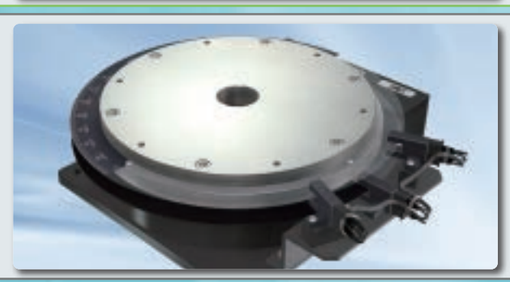
Timing belt drive





Direct drive





Characteristics of Mechatronics Series

		Motion direction	Stroke length	Thrust force	Speed	Acceleration	Positioning accuracy

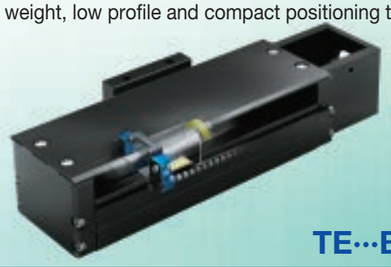
Code description ◎Excellent ○Good △Fair

IKO Mechatronics Series Lineup

Precision Positioning Table TE

- High-strength aluminum alloy is used for main components
- Light weight, low profile and compact positioning table



TE···B

Precision Positioning Table TU

- High rigidity U-shaped track rail adopted
- Various table specifications are available according to your use.

TU

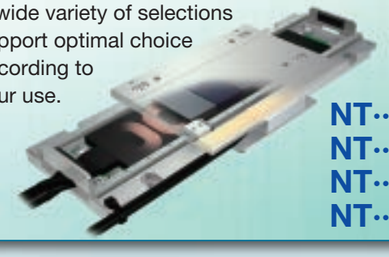
Precision Positioning Table LB

- High-speed type using a timing belt drive
- Parallel arrangement of Linear Way ensures stable and high operating performance.

TSLB

Nano Linear NT

- Pursuing ultimate compactification
- Very low profile of NT38V: only 11mm
- A wide variety of selections support optimal choice according to your use.



NT···V
NT···H
NT···XZ
NT···XZH

Precision Positioning Table L

- Standard type highly-proven in various fields
- Parallel arrangement of Linear Ways with stable performance

TSL···M

Precision Positioning Table LH

- Component parts from rigorous selection ensure high accuracy and reliability.
- High rigidity and large carrying mass

TSLH···M CTLH···M

Alignment Stage SA

- Sectional height of 3 axes X, Y and θ is only 52mm (SA65DE).
- X- and Y-axis: 0.1μm, θ-axis: excellent resolution as high as 0.36 sec (SA120DE)

SA···DE

Linear Motor Table LT

- Both high speed and high resolution are achieved.
- High acceleration / deceleration, high response and smooth operations
- Long term maintenance free specification with C-Lube built in

LT···CE
LT···LD
LT···H

Super Precision Positioning Table TX

- Achieved ultimate positioning performance with rolling guide type
- High accuracy attained by fully-closed loop control

TX···M CTX···M

Cleanroom Precision Positioning Table TC

- Optional for use in high cleanliness environment for semiconductor and LCD manufacturing machines
- Light weight, low profile and compact positioning table

TC···EB

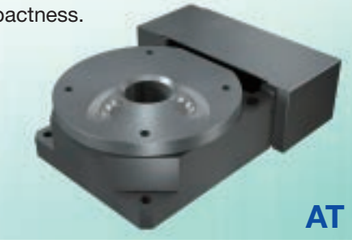
Rotary Table RT

- High speed and high resolution rotary positioning table
- Crossed Roller Bearing ensures high accuracy and high rigidity.

RT

Alignment Table AT

- High accuracy positioning ensuring precise angle correction
- Crossed Roller Bearing ensures high rigidity and compactness.



AT

Micro Precision Positioning Table TM

- Ground ball screw drive realizes ultra-small size with sectional height of 20mm and width of 17mm.
- High positioning accuracy and excellent durability

TM

Precision Positioning Table TS/CT

- Compact structure with low profile
- Crossed Roller Way guaranteeing high reliability and high accuracy

TS CT

Alignment Module AM

- Supports free designing of stage according to your use
- Control tolerance of height within $\pm$10μm

AM

Precision Elevating Table TZ

- Unique wedge mechanism ensures compact and high accuracy vertical positioning.
- TZ···X achieving high accuracy and high rigidity through adoption of C-Lube Linear Roller Way Super MX

TZ
TZ···H
TZ···X

Precision Positioning Table L

Ball screw drive

TSL···M

Linear

- Standard type highly-proven in various fields
- Parallel arrangement of Linear Ways with stable performance
- High running accuracy and positioning accuracy
- Many size variations support easy multi-axis system configurations.
- Long term maintenance free specification with C-Lube built in

Specification

Model and size	Maximum stroke (mm)	Maximum speed (mm/s)	Ball screw lead (mm)
TSL 90 M	300	500	5, 10
TSL 120 M	600	500	5, 10
TSL 170 M	500	500	5, 10

Precision Positioning Table TU

Ball screw drive

TU

Linear

- Original high rigidity U-shaped track rail adopted
- Various table specifications are available according to your use.
- Slide table with high accuracy and high rigidity in a single structure
- Easy ordering just by specifying the identification number for the required functions and performance

Specification

Model and size	Maximum stroke (mm)	Maximum speed (mm/s)	Ball screw lead (mm)
TU 25	100	400	4

Precision Positioning Table LH

Ball screw drive

TSLH···M (Single-axis specification)

CTLH···M (Two-axis specification)

Linear

- Component parts from rigorous selection ensure high accuracy and reliability.
- High rigidity and large carrying mass
- High running accuracy and positioning accuracy
- The series including ultra large size with table width of 420mm
- Long term maintenance free specification with C-Lube built in

Specification

Model and size	Maximum stroke (mm)	Maximum speed (mm/s)	Ball screw lead (mm)
TSLH120M	300	500	5, 10

A Variety of Models and Variations

Alignment Stage SA

Linear motor drive

SA···DE

Linear Alignment

- Slim and compact design with sectional height of 3 axes, X, Y and θ being only 52mm (SA65DE)
- X- and Y-axis: 0.1μm, θ-axis: excellent resolution as high as 0.36 sec (SA120DE)
- Free and independent combination of X, Y and θ

Specification

Model and size	Maximum stroke Maximum operating angle	Maximum speed	Resolution
SA 65 DE/X	10 (mm)	500 (mm/s)	0.1, 0.5 (μm)
SA120 DE/X	20 (mm)	800 (mm/s)	0.1, 0.5 (μm)

Linear Motor Table LT

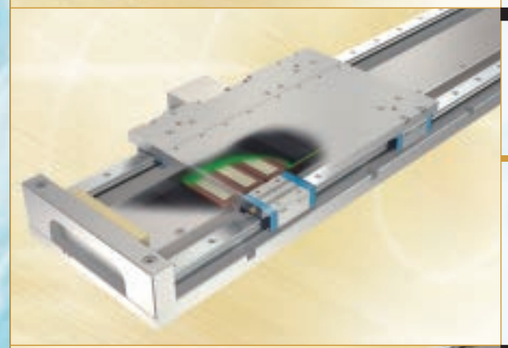
Compact Type

Linear motor drive

LT···CE

Linear

- Compact
- High static stability
- High speed stability
- High acceleration / deceleration and high response
- Long term maintenance free specification with C-Lube built in



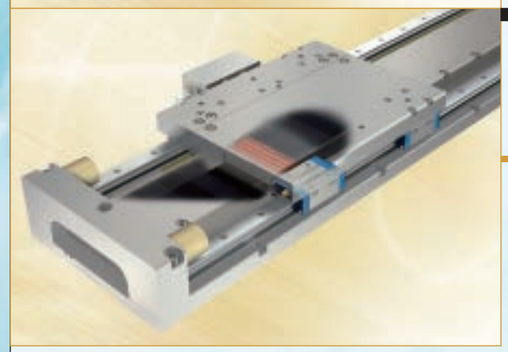
Long Stroke Type

Linear motor drive

LT···LD

Linear

- Super long stroke
- High static stability
- High speed stability
- Both high speed and high resolution are achieved.
- Long term maintenance free specification with C-Lube built in



High Thrust Type

Linear motor drive

LT···H

Linear

- High thrust
- High acceleration / deceleration, high response and smooth operations
- High static stability
- Air-cooling capable
- Long term maintenance free specification with C-Lube built in

Specification

Model and size	Maximum stroke (mm)	Maximum speed (mm/s)	Resolution (μm)
LT100CE	1 000	2 000	0.1, 0.5, 1.0

For light weight and low profile innovative tables

Precision Positioning Table TE

TE···B

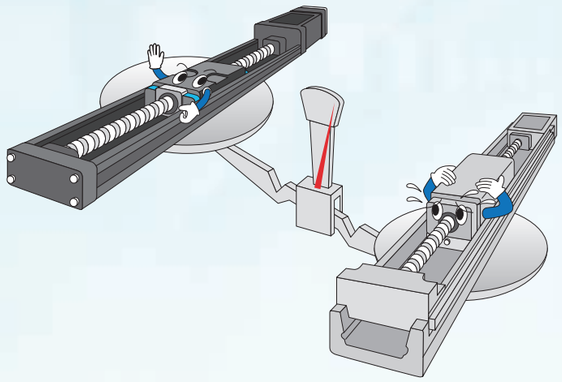
High-strength aluminum alloy is used for main components. Light weight and compact structure with slide table assembled inside the U-shaped bed!

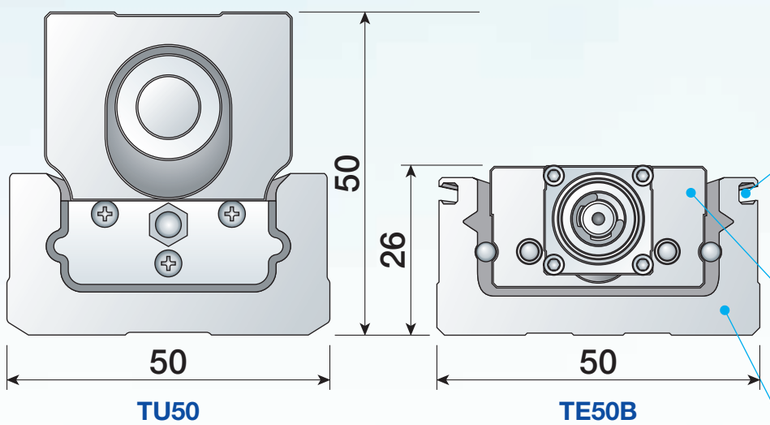
● Mass

unit: kg

Bed width(mm)	TU	TE···B
50	1.8	0.52
60	3.3	1.0
86	10.9	3.7

The value shows the mass of the entire table with 1 standard table.





Respective sensors to be attached directly into the mounting groove

Slide table and linear motion rolling guide integrated in a single structure to ensure low profile and compact design!

Ultra light weight achieved through the use of slide table and bed made of high-strength aluminum alloy!

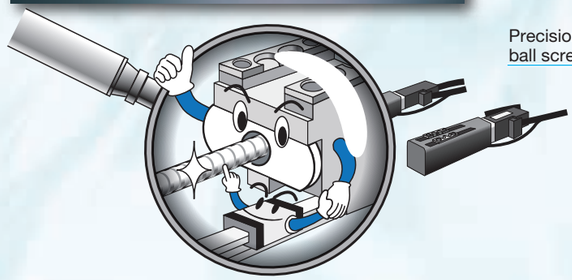
For ultimate compactification

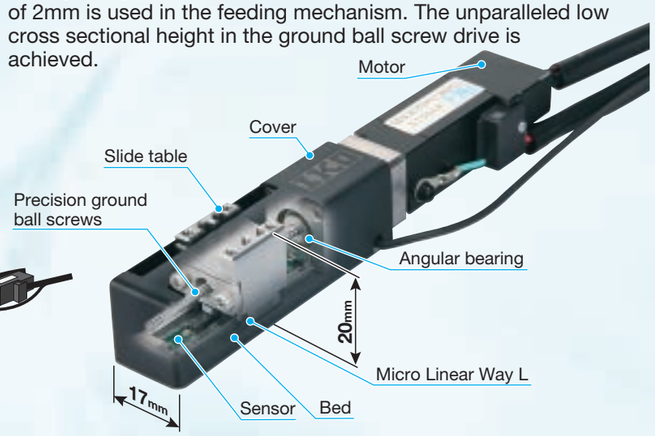
Micro Precision Positioning Table TM

TM

Ground ball screw specification realizes ultra-small size with sectional height of 20mm and width of 17mm.

Micro Linear Way L with track rail width of 2mm is adopted in the table guiding parts, and miniature ball screw with screw diameter of 2mm is used in the feeding mechanism. The unparalleled low cross sectional height in the ground ball screw drive is achieved.



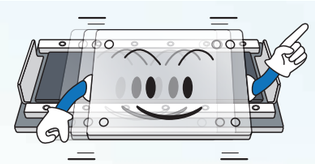


Nano Linear NT

NT···V

Pursuing ultimate compactification NT38V10, the smallest in the series, is only 11mm in sectional height, 38mm in table width and 62mm in entire length.

The occupied space is not increased even when tables are layered in X and Y, so further miniaturization of the positioning mechanism is promoted.



Model	NT···V						
	NT38V10	NT38V18	NT55V25	NT55V65	NT80V25	NT80V65	NT80V120
Model and size							
Sectional dimension							

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

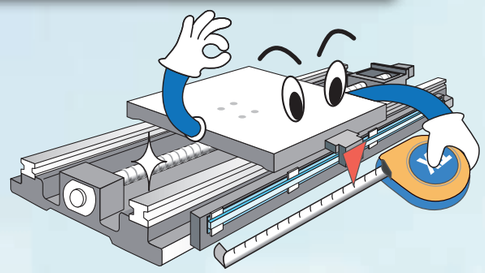
For higher accuracy

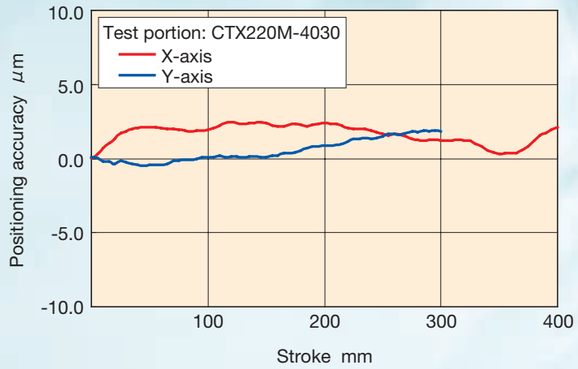
Super Precision Positioning Table TX

TX···M, CTX···M

Super high positioning accuracy and resolution guaranteed with an onboard super high accuracy linear encoder!

Adoption of C-Lube Linear Roller Way Super MX ensures ultimate running performance. Fully-closed loop control is established by super high resolution linear encoder to ensure high positioning accuracy over the whole stroke length.



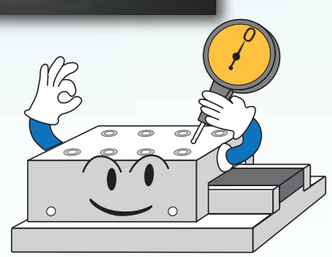


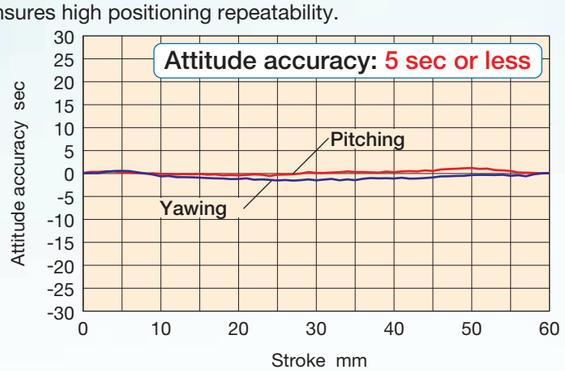
Nano Linear NT

NT···H

High attitude accuracy is realized!

Combination of parts processed with high accuracy and Anti-Creep Cage Crossed Roller Way realizes attitude accuracy of 5 sec or less. Variations in attitude due to movement is minimized, which ensures high positioning repeatability.

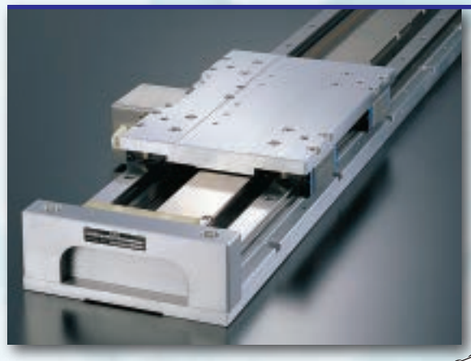




For attaining both high accuracy positioning and high speed

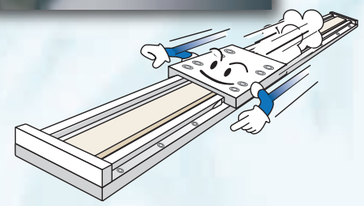
Linear Motor Table LT

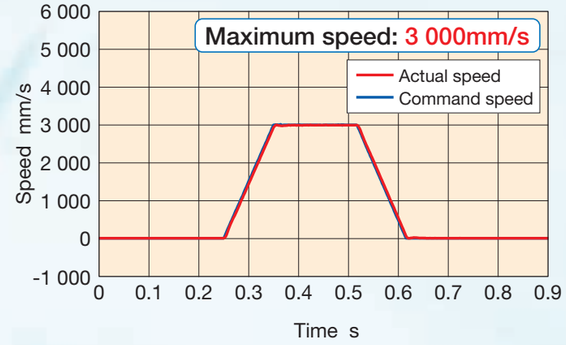
LT···LD



Direct drive enables both high-precision positioning and high speed.

Supports high speed operation required for long stroke motion
It is possible to perform high-speed motion of up to 3,000mm/s.





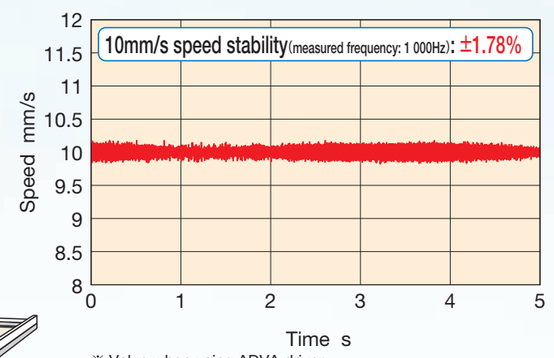
※ Value when using ADVA driver.

For high speed stability

Linear Motor Table LT

LT···CE, LT···LD, LT···H

Direct drive and advanced servo technology has achieved high speed stability.



※ Value when using ADVA driver.

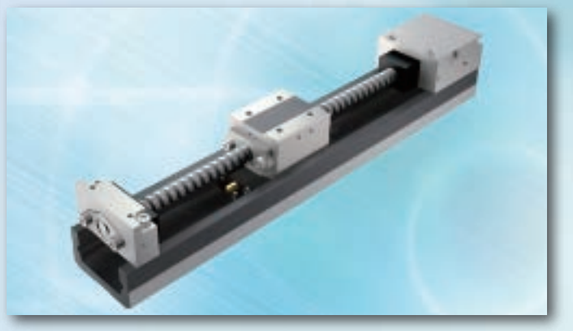
1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

For choosing from a wide variety of options

Easy ordering is possible right now just by specifying the identification number for the required functions and performance!

Precision Positioning Table TU

TU

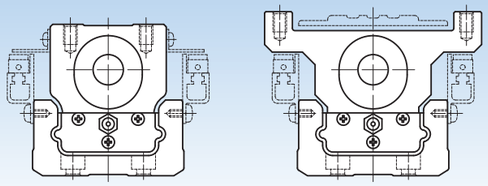


Precision Positioning Table TE

TE···B

Shape of slide table

Two types of shape are available according to needs.

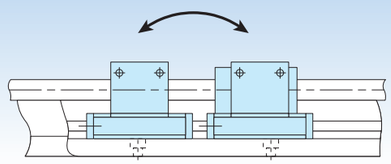


Standard
Short, standard, long

With flange
Short, standard, long

Number of slide tables

Two slide tables can be mounted on the track rail depending on the applied load and the moment.



Type and lead of ball screw

Rolled ball screw or ground ball screw can be selected according to the required accuracy. Ball screw lead is also selectable.

Motor folding back specification

Shortening the overall length of the table will contribute to space-saving.

With bridge cover

A specification with bridge cover is available for preventing foreign matter from falling onto the table.

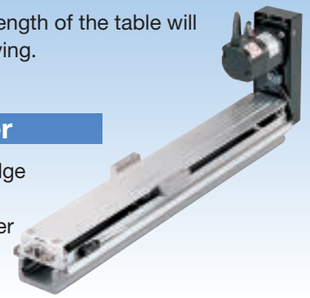


Table with bellows

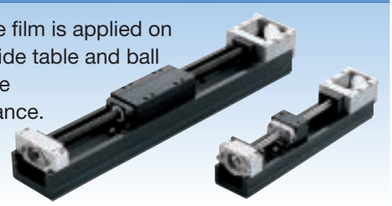
A specification with bellows is available for preventing foreign matter from intruding into the inside of the table.

Black chrome surface treatment

Black permeable film is applied on the surface of slide table and ball screw to improve corrosion resistance.



For clean environment applications

Cleanroom Precision Positioning Table TC

TC···EB

Cleanliness class 3 is achieved!

Stainless sheet with excellent corrosion resistance and side cover seal up drive parts and slide table guiding parts. Stainless sheet is pressed onto the side cover by resin roller within the slide table. The structure which ensures proper attraction by the strong magnet sheet prevents dust from generating to the surrounding of the table by air suction from the sealed internal space.

For maintenance free

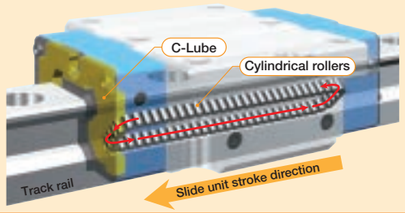
Oil Minimum
Gentle to The Earth IKO

Original and world's first structure with 【C-Lube】

C-Lube integrated

Lubrication oil is carried through circulation of rolling elements

The lubrication oil is supplied directly to the rolling elements, not to the track rail.
When rolling elements make contact with the capillary lubricating element integrated with the circulation path of slide unit rolling elements, the lubrication oil is supplied to surfaces of rolling elements and carried to the loading area through circulation of rolling elements.
This results in adequate lubrication oil being properly maintained in the loading area and lubrication performance will last for a long time.



Lubrication oil is directly supplied to surfaces of the rolling elements

The surface of capillary lubricating element is always covered with the lubrication oil.
Lubrication oil is continuously supplied to the surface of rolling elements by surface tension in the contact of capillary lubricating element surface and rolling elements.
On the surface of capillary lubricating element with which the rolling elements make contact, new lubrication oil is always supplied from the other sections.

Lost motion	–
Parallelism in table motion A	–
Parallelism in table motion B	0.008～0.016
Attitude accuracy	–
Straightness	–
Backlash	0.005

Points

● Light weight, low profile and high-precision positioning table

1 Light weight, low profile and compact positioning table using high-strength aluminum alloy for its main components with a slide table assembled inside a U-shaped bed.
The mass of the entire table is reduced to about 40% of TU series. Low cross sectional height (26mm for TE50B, 33mm for TE60B, and 46mm for TE86B). Moreover, the structure of various sensors directly installable on sensor mounting groove of the bed contributes to the miniaturization.

● Table specification is selectable according to your use

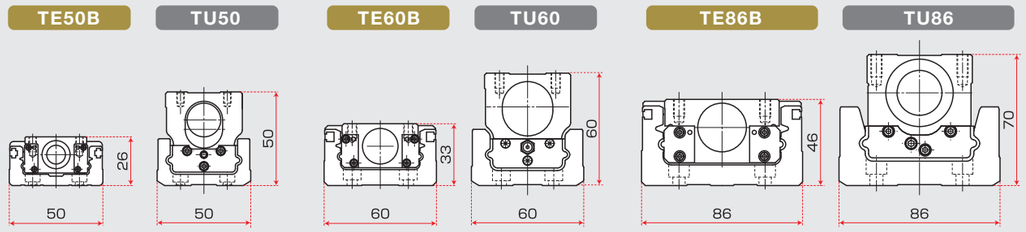
2 There are two types in the shape of slide table: standard and with flange. The number of slide tables, motor folding back specification, ball screw lead, with or without a dust protection cover, installation of various sensors can be selected, you can select an optimal product for the specifications of your machine and device.

● Excellent cost performance

3 The excellent cost performance is realized by reducing the number of parts, and optimizing the part shapes.

Comparison with Precision Positioning Table TU

● Sectional height



● Mass

Model and size	Stroke length(mm)	Overall length(mm)	Mass(kg)	Mass / 100mm(kg)
TE50B	60	218	0.52	0.24
TU50	60	226	1.8	0.80
TE60B	100	269	1.0	0.37
TU60	100	298	3.3	1.11
TE86B	300	523	3.7	0.71
TU86	250	498	10.9	2.19

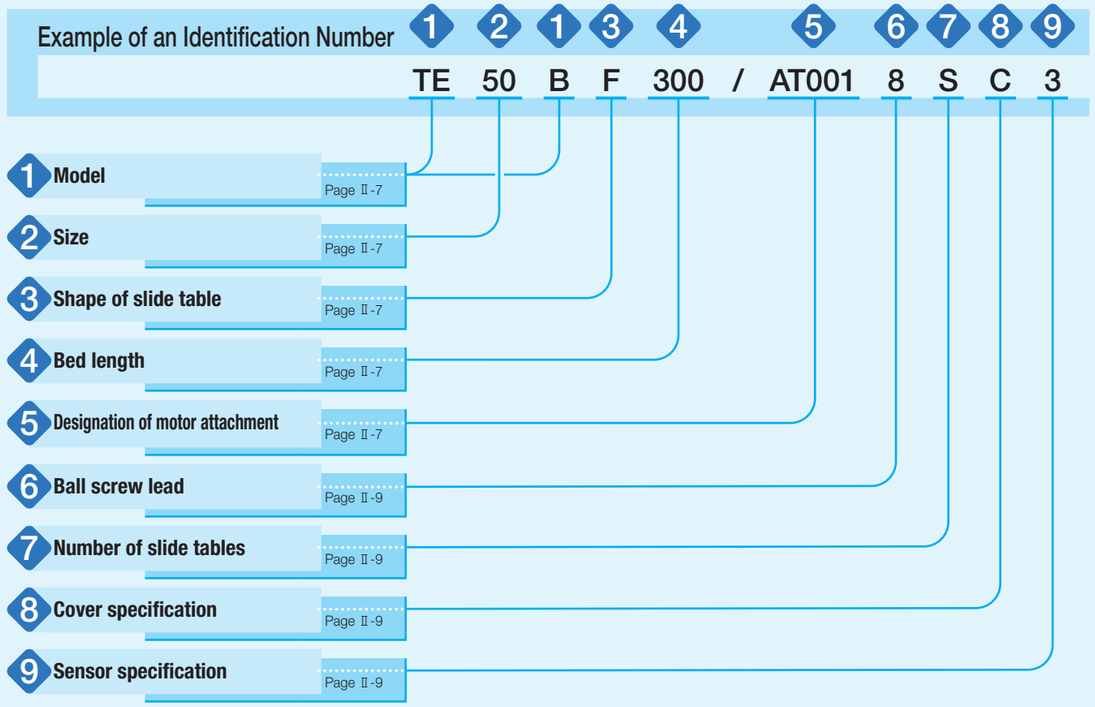
Identification Number



Identification Number and Specification

1 Model

TE···B: Precision Positioning Table TE

2 Size

Size indicates bed width.
Select a size from the list of Table 1.

3 Shape of slide table

S: Standard table
F: Flange type standard table

4 Bed length

Select a bed length from the list of Table 1.

Table 1 Sizes and bed lengths unit: mm

Model and size	Bed width	Bed length
TE50B	50	150, 200, 250, 300
TE60B	60	150, 200, 300, 400, 500, 600
TE86B	86	340, 440, 540, 640, 740, 840, 940

Remark: For stroke length, please see the dimension tables shown in pages of Ⅱ-17 or later.

5 Designation of motor attachment

AT000 : Motor inline specification Without motor attachment
AT001 to AT011 : Motor inline specification With motor attachment
AR000 : Motor folding back specification Without motor attachment
AR001 to AR008 : Motor folding back specification With motor attachment
To specify the motor attachment, select it from the list of Table 2.1 and Table 2.2.

- Please specify motor folding back specification and motor attachment applicable to motor for use.
- If motor inline specification with motor attachment is specified, the main body is shipped with a coupling indicated in the Table 3 mounted. However, the final position adjustment should be made by customer since it is only temporarily fixed. For a product without motor attachment (AT000), no coupling is attached.
- If motor folding back specification with motor attachment is specified, "housing applicable to the specified motor, pulley (on motor side and ball screw side), cover, motor bracket, belt and bolts necessary for assembly" are supplied. Motor mounting bolts should be prepared by customer.

Notes (1) When two units of slide table are used, it is about 1.5 times as long as that of one unit, and when table of motor folding back specification is used, it is about twice.
(2) For motor folding back specification, please add the following value to the value in the table.
TE50B: 0.17×10^{-5}kg·m², TE60B: 0.39×10^{-5}kg·m², TE86B: 0.86×10^{-5}kg·m²

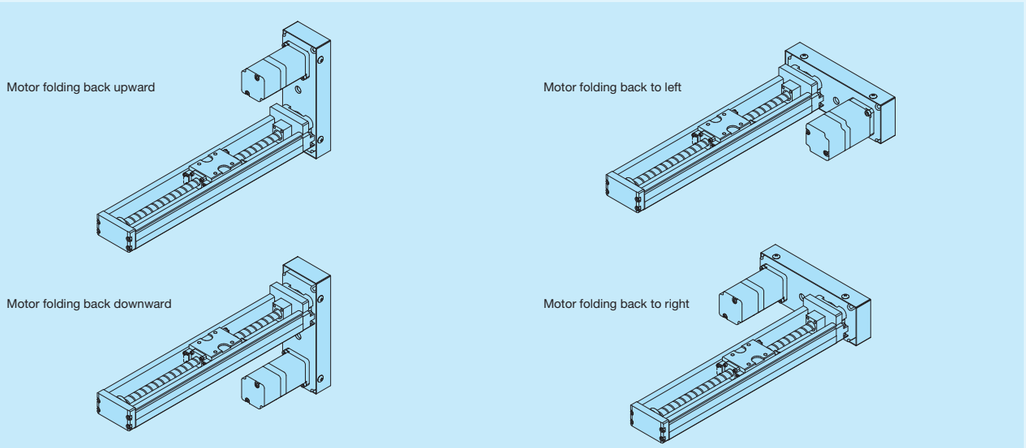
1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Motor Folding Back Specification

Motor folding back specification is available for Precision Positioning Table TE, space can be saved by folding back the motor and reducing the overall length of the table. For dimensions of motor folding back specification, please refer to respective dimension table.

For motor folding back specification, assembly should be made by customer since "housing applicable to the specified motor, pulley (on motor side and ball screw side), cover, motor bracket, belt and bolts necessary for assembly" are supplied. However, motor mounting bolts should be prepared by customer. The motor attachment can be attached in 4 directions as indicated in the following figure.

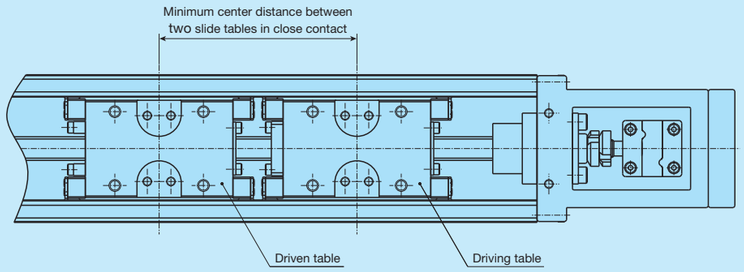
There is difference in dimension between where the motor attachment or the motor is lower than the bottom of the bed depending on the motor folding back direction. Do the design ensuring that the peripheral components do not interfere and that enough allowance is provided according to the approximate values in the dimension table shown in Page Ⅱ-23 to Ⅱ-28.



Two Slide Table Specification

Two slide table specification is available for Precision Positioning Table TE. Ball screw nuts are mounted on slide table at the motor side, and it can be driven by the motor (driving table). Ball screw nuts are not mounted on slide table at the opposite motor side, and it is free condition (driven table).

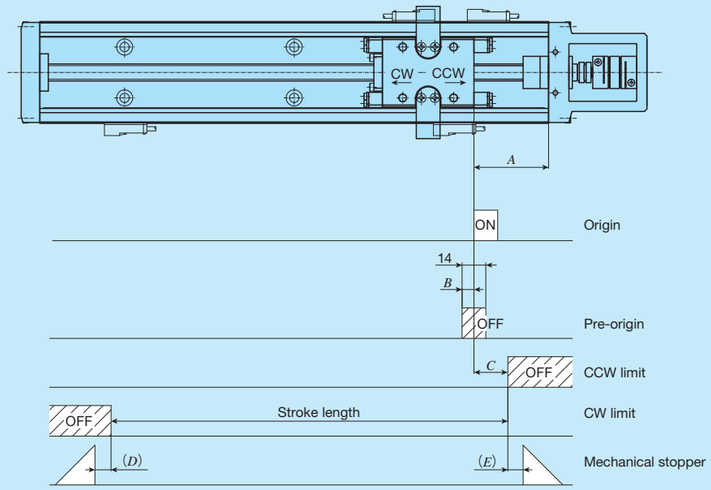
It is possible to make the structure resistant to moment load by using two slide tables in combination (Table 8). When combining slide tables, allow more clearance than "Minimum center distance between two slide tables in close contact" described in the dimension table shown in pages Ⅱ-17 to Ⅱ-28. (Enlarging the span will shorten the stroke.)



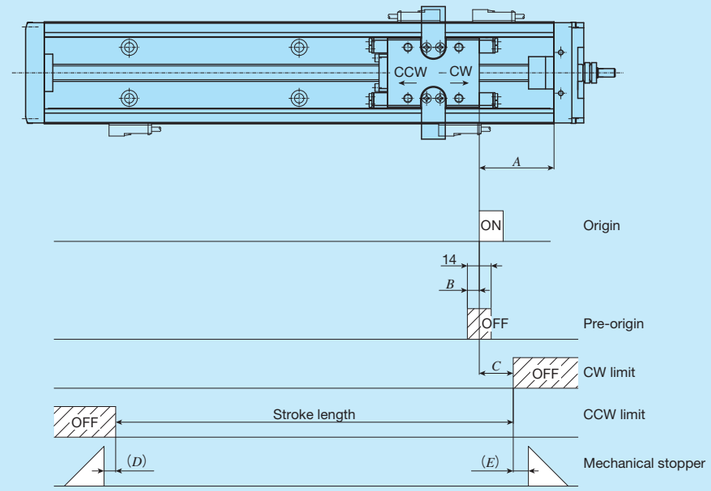
Sensor Specification

Table 12 Sensor timing chart

Motor inline specification



Motor folding back specification



unit: mm

Model and size	Ball screw lead	*A*	*B*	*C*	*D*(1)	*E*
TE50B	4	33	2	10	6 (9)	5
	8		6

Points

● Compact and slim type positioning table with an original U-shaped track rail

1 Precision Positioning Table TU is a compact and slim type positioning table with a slide table assembled inside a U-shaped track rail.
Also, by adopting a U-shaped track rail, the rigidity of the track rail under moment load and torsion is greatly increased. The track rail can be used as a structure beam of the machine and equipment. Therefore, freedom of design is expanded for user.

● Slide table with high accuracy and high rigidity in a single structure

2 The slide table is an integral part of a linear motion rolling guide mechanism, in which large diameter steel balls are arranged in two rows and make four-point contact with the raceways. High accuracy and high rigidity positioning can thus be obtained even in applications where fluctuating load or complex load is applied.

● The optimal table specification can be selected from a variety of options → Page Ⅱ-33

3 The optimal positioning table for each specific application can be configured easily by only indicating required functions and performance from our substantial size variations and a variety of options by the identification number.

Variation

Shape		Model	Track rail width (mm) 25	30	40	50	60	86	100	130

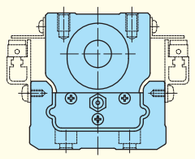
1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

TU

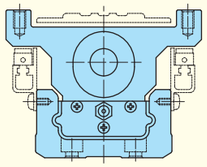
Special specifications that can be specified by the identification number

Shape and length of the slide table

The shape can be selected from two types, "standard" type and "with flange" type, and three types with different length with same section, i.e. short, standard, and long are listed on lineup. A bridge cover and XY bracket can be attached to the "with flange" type.



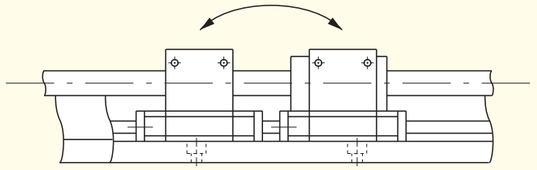
Standard
Short (C), standard (no symbol), long (G)



With flange
Short (FC), standard (F), long (FG)

Number of slide tables

Two slide tables can be mounted on the track rail depending on the applied load and the moment.



Type and lead of ball screw

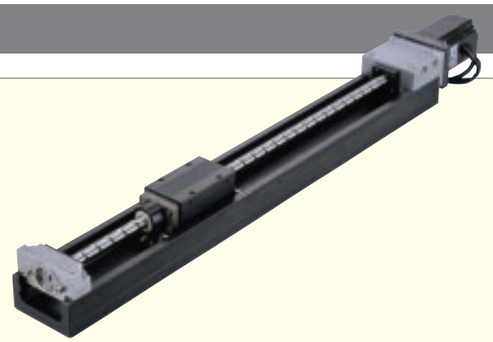
Rolled ball screws and precision ball screws can be selected according to required accuracy. Ball screw lead is also selectable. The specification without ball screw can be used as a driven side linear motion rolling guide in biaxial parallel arrangement.

Designation of sensor

Mounting of various sensors such as limit sensors and origin sensors can be designed.

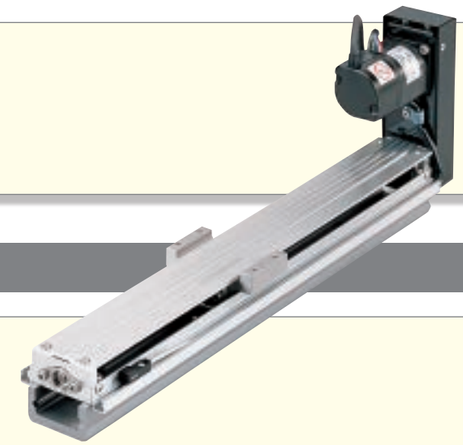
Table with C-Lube

Maintenance works such as relubricating with grease for ball screws and linear motion rolling guides can be reduced significantly by attaching lubrication part "C-Lube" impregnated with lubricant.



Motor folding back specification

The motor folding back specification table can realize space saving by reducing the overall length of the table.

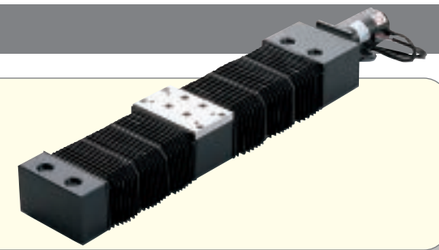


With bridge cover

A bridge cover can be attached to the "With flange" type.

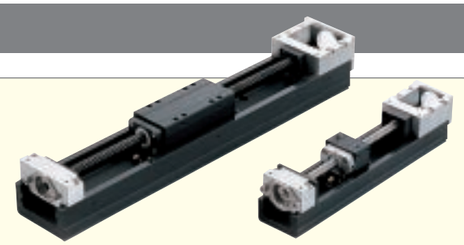
Table with bellows

A series of tables with bellows is available for preventing foreign matter from intruding into the table by covering the linear motion rolling guide and drive section with bellows.



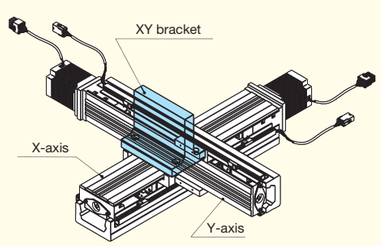
Black chrome surface treatment

Black permeable film is applied on the surface of slide table and ball screw to improve the corrosion resistance.



XY bracket

XY table can be configured easily since a series of XY bracket is available.



Identification Number

Remark: For stroke length, please see the dimension tables shown in pages of Ⅱ-75 or later.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

5 Designation of motor attachment

AT100 : Motor inline specification Without motor attachment
AT101 to AT125 : Motor inline specification With motor attachment
AR100 : Motor folding back specification Without motor attachment
AR101 to AR110 : Motor folding back specification With motor attachment

Application of motor folding back specification is shown in Table 3. To specify the motor attachment, select it from the list of Table 6.1 and Table 6.2.

- Motor should be prepared by customer.
- Please specify motor folding back specification and motor attachment applicable to motor for use.
- If motor inline specification with motor attachment is specified, the main body is shipped with a coupling indicated in the Table 7 mounted. However, the final position adjustment should be made by customer since it is only temporarily fixed. For a product without motor attachment (AT100), no coupling is attached.
- If motor folding back specification with motor attachment is specified, "housing applicable to the specified motor, pulley (on motor side and ball screw side), cover, motor bracket, belt and bolts necessary for assembly" are supplied. Motor mounting bolts should be prepared by customer.

Table 3 Application of motor folding back specification

Model and size	With motor attachment		Without motor attachment
	AC servomotor	Stepper motor	
TU 25	–	–	–
TU 30	–	–	–
TU 40	○	○	○
TU 50	○	○	○
TU 60	○	–	○
TU 86	○	–	○
TU100	–	–	–
TU130	–	–	–

6 Ball screw type

No symbol: Rolled screw
G : Ground screw
N : Without ball screw
From among various types of ball screws shown in Table 4, select your desired one.

When specifying N
- For the entry of section 5, specify AT100 or AR100, and for the entry of section 7, specify "No symbol".
- For the entry of section 10, select "Without sensor" (by specifying 0).
- In the entry of section 9, you cannot specify "With bellows".

7 Ball screw lead

From among ball screw leads applicable to the sizes shown in Table 4, select your desired one.

Table 4 Application of ball screw lead

Model and size	Ball screw type	Ball screw lead mm					
		4	5	8	10	20	25
TU 25	Ground screw	○	–	–	–	–	–
TU 30	Ground screw	–	○	–	–	–	–
TU 40	Rolled screw	○	–	○	–	–	–
	Ground screw	○	–	○	–	–	–
TU 50	Rolled screw	–	○	–	○	–	–
	Ground screw	–	○	–	○	–	–
TU 60	Rolled screw	–	○	–	○	–	–
	Ground screw	–	○(1)	–	○(1)	○(1)	–
TU 86	Rolled screw	–	–	–	○(2)	○(2)	–
	Ground screw	–	–	–	○(2)	○	–
TU100	Ground screw	–	–	–	–	○	–
TU130	Ground screw	–	–	–	–	–	○

Notes (1) This is not applied to track rail lengths of 990mm and 1,190mm.
(2) This is not applied to track rail lengths of 1,390mm and 1,590mm.

8 Number of slide table

S: One unit
C: Two units

9 Cover specification

0 : Without cover
C: With bridge cover (applied to TU···FC, TU···F, and TU···FG)
J : With bellows (applied to TU60S and TU86S)

- When specifying "With bellows (J)", select 1 piece (by specifying S) for the entry of section 8.
- "With bellows" type is not provided for TU60 with track rail lengths of 990 and 1,190mm and TU86 with track rail lengths of 1,390 and 1,590mm.
- "With bridge cover" type is not provided for TU60 with track rail lengths of 1,190mm and TU86 with track rail lengths of 1,590mm.

10 Specification of sensor

0: Without a sensor, without a sensor rail
2: Two sensors (limit), with a sensor rail
3: Three sensors (limit and pre-origin), with a sensor rail
4: Four sensors (limit, pre-origin, and origin), with a sensor rail
9: Without a sensor, with a sensor rail

11 Specification of surface treatment

No symbol: Not treated
R : Black chrome surface treatment 1
Black chrome surface treatment is applied on the surfaces of a slide table and track rail.
L : Black chrome surface treatment 2
In addition to the black chrome surface treatment 1, this treatment is applied on the ball screw shaft and nut.

12 Specification of C-Lube

No symbol: No C-Lube
Q : Table with C-Lube

A C-Lube is mounted on the slide table and the end face of a nut of ball screw. The C-Lube is a lubrication part with much lubricant oil impregnated in the consecutive porous resin. Sliding or moving along a smooth surface with contact on the track rail and the raceway surface of the ball screw causes the lubricant oil within the plate to continue to seep on the raceway surface, thus reducing the number of hours for maintenance caused by the extension of lubrication interval. This is an effective countermeasure for the attrition of grease at the location difficult to be lubricated.

- When specifying Q, for the entry of section 6, select ground screw (by specifying G) or without ball screw (by specifying N).

Table 5 Application of C-Lube

Model and size	Rolled screw	Ground screw	Without ball screw

Note (1) This does not apply to table of motor folding back specification.
Remark: The positioning repeatability values in ( ) are reference values provided that the timing belt tension is properly adjusted in motor folding back specification table.

Table 9.1 Maximum speed (AC servomotor)

Motor type	Model and size	Length of track rail mm	Maximum speed mm/s						
			Lead 2mm	Lead 4mm	Lead 5mm	Lead 8mm	Lead 10mm	Lead 20mm	Lead 25mm

Notes (1) The value in ( ) represents track rail length of motor folding back specification.
(2) When two units of slide table are used, it is about 1.5 times as long as that of one unit, and when table of motor folding back specification is used, it is about twice. The value in ( ) represents starting torque of C-Lube specification.
(3) For motor folding back specification, please add the following value to the value in the table.
TU40 and TU50: 0.17×10^{-5}kg·m², TU60: 0.86×10^{-5}kg·m²

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

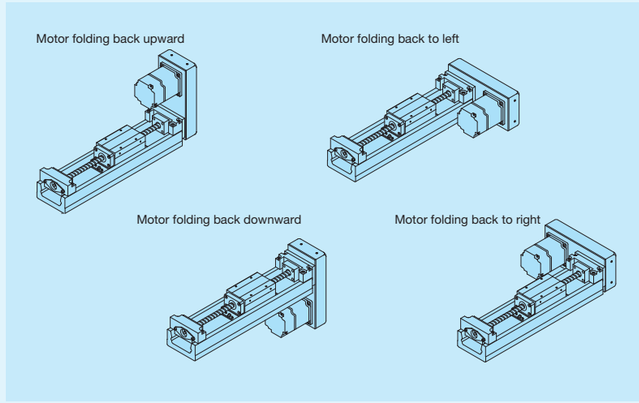
	1 310	19	
	1 460	20	

Model and size	Length of track rail mm	Table inertia J_T ×10⁻⁵kg·m²	Starting torque T_S (2) N·m
		Standard table	
		Lead 25mm	Ground screw
TU130	1 010	39	0.40 (0.50)
	1 160	43	
	1 310	48	
	1 460	52	
	1 610	57	

Notes (1) The value in ( ) represents track rail length of motor folding back specification.
(2) When two units of slide table are used, it is about 1.5 times as long as that of one unit, and when table of motor folding back specification is used, it is about twice. The value in ( ) represents starting torque of C-Lube specification.
(3) For motor folding back specification, please add the following value to the value in the table.
TU86: 0.86×10⁻⁵kg·m²

Motor Folding Back Specification

Motor folding back specification is available for Precision Positioning Table TU, space can be saved by folding back the motor and reducing the overall length of the table. For dimensions of motor folding back specification, please refer to respective dimension table.
For motor folding back specification, assembly should be made by customer since "housing applicable to the specified motor, pulley (on motor side and ball screw side), cover, motor bracket, belt and bolts necessary for assembly" are supplied. However, motor mounting bolts should be prepared by customer.
Motor folding back unit can be mounted in 4 directions as indicated in the following figure.



Cover Specification

A bridge cover and bellows are available for Precision Positioning Table TU as a measure for protection against dust.
For the dimensions of table with bellows, please see dimension tables shown in pages of Ⅱ-83 to Ⅱ-84.

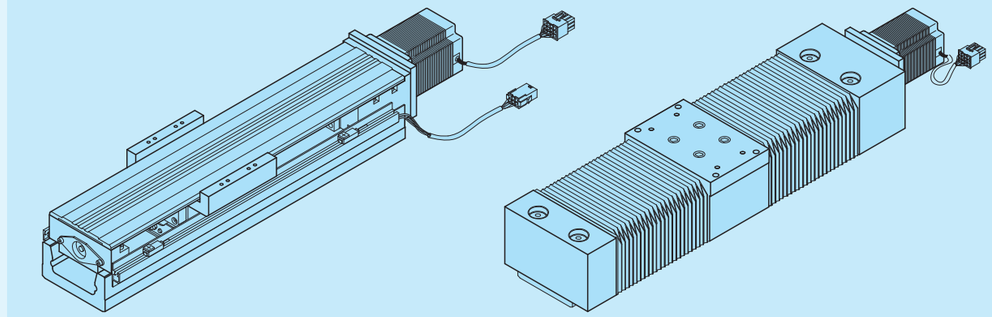


Table with bridge cover　　Table with bellows

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Two Slide Table Specification

Two slide table specification is available for Precision Positioning Table TU. Ball screw nuts are mounted on slide table at the motor side, and it can be driven by the motor (driving table). Ball screw nuts are not mounted on slide table at the opposite motor side, and it is free condition (driven table).
It is possible to make the structure resistant to moment load by using two slide tables in combination (Table 11). When combining slide tables, allow more clearance than "minimum center distance between two slide tables in close contact" described in the dimension table shown in pages Ⅱ-63 to Ⅱ-92 (Enlarging the span will shorten the stroke.).

Example of Combination

In Precision Positioning Table TU, using XY bracket enables you to configure various two-axis combination. Light aluminum alloy-made XY bracket can be mounted to a flange type standard table. Table 16 shows various XY bracket models. If you are interested, please specify the model number of your desired model from the table.

Table 16 Configuration of two-axis combination and XY bracket models

Notes (1) The value indicates the allowable stroke length when limit sensors are mounted. The value in ( ) represents dimension for two slide tables in close contact.
(2) The value shows the mass of the entire table with one slide table.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

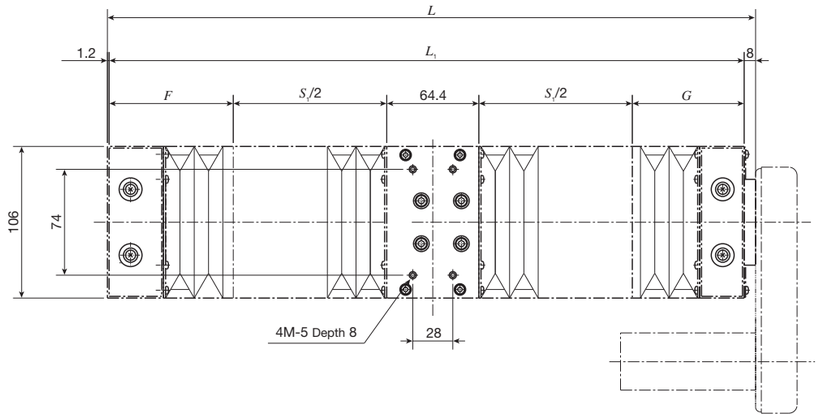
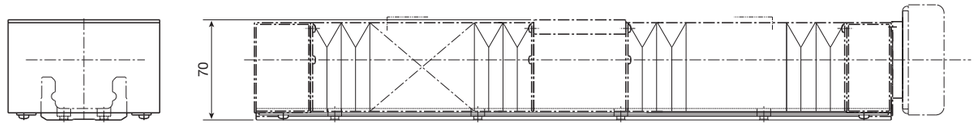
TU60S Table with bellows





unit: mm

Length of track rail L_1	Overall length L	Limit stroke length (1) S_1	Stroke length (2) S	F	G
290 (244)	299.2(253.2)	73.6(68.6)	65(60)	59(59)	93(52)
390 (344)	399.2(353.2)	147.6(142.6)	140(135)	72(72)	106(65)
490 (444)	499.2(453.2)	219.6(214.6)	210(205)	86(86)	120(79)
590 (544)	599.2(553.2)	293.6(288.6)	285(280)	99(99)	133(92)
690 (644)	699.2(653.2)	393.6(388.6)	380(375)	99(99)	133(92)
790 (744)	799.2(753.2)	465.6(460.6)	455(450)	113(113)	147(106)

Notes (1) The value indicates the limit value of stroke with which the slide table can move.
(2) The value indicates the allowable stroke length when limit sensors are mounted.
Remarks 1. The values in ( ) are applied to table with bellows of motor folding back specification.
2. For the track rail mounting dimensions, please see the dimension table for TU60.
3. Applicable to tables with C-Lube.

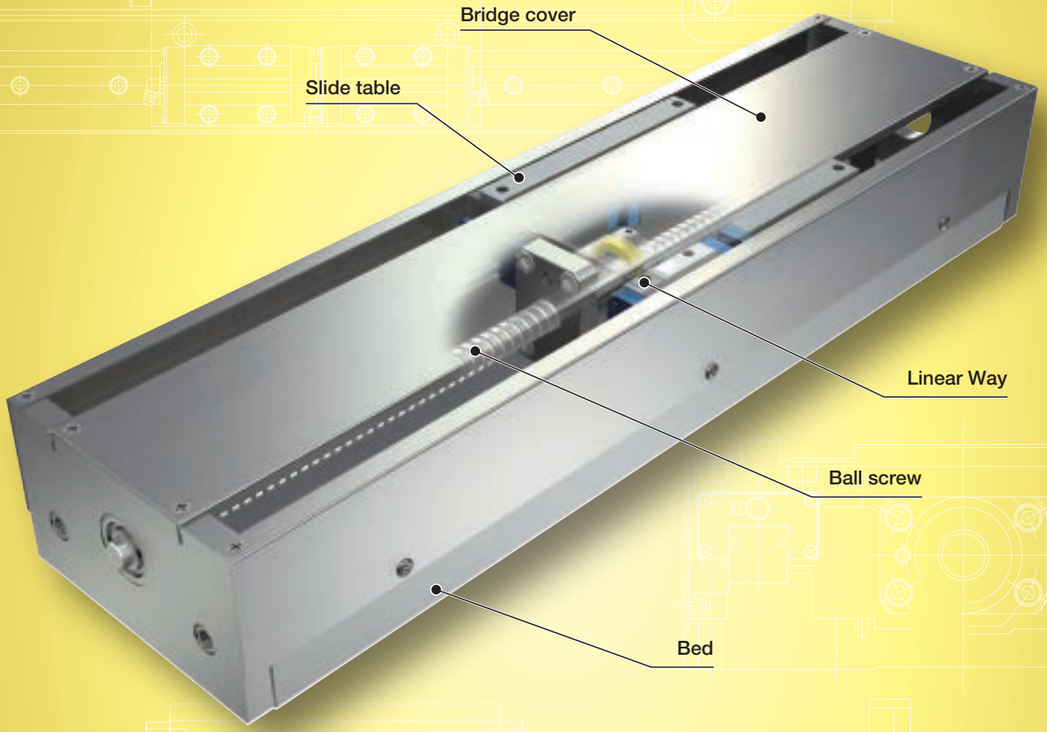
Ball screw

Linear



Major product specifications

Driving method	Precision ball screw
Linear motion rolling guide	Linear Way（ball type）
Built-in lubrication part	Lubrication part "C-Lube" is built-in
Material of table and bed	High-strength aluminum alloy
Sensor	Provided as standard

Accuracy

unit: mm

Positioning repeatability	±0.002
Positioning accuracy	0.015～0.060
Lost motion	–
Parallelism in table motion A	–
Parallelism in table motion B	0.020～0.070
Attitude accuracy	–
Straightness	–
Backlash	0.003

Points

● Light weight and long stroke positioning table

1 Light weight and long stroke positioning table configured with the slide table and bed made from high-strength aluminum alloy.

● Stable high running accuracy and positioning accuracy

2 High running accuracy and high accuracy positioning are realized by incorporating 2 sets of Linear Way in parallel, and combining with precision ball screws.

● Configuration of multiaxis system available with XY bracket

3 A series of four sizes from 90mm to 220mm (table width) is available. Multiaxis configuration can be easily realized with XY bracket.

Variation

Identification Number and Specification

1 Model

TSL···M: Precision positioning table L

2 Size

Size indicates table width.
Select a size from the list of Table 1.

3 Stroke length

Select a stroke length from the list of Table 1.

Table 1 Sizes, table width dimensions, and stroke lengths unit: mm

Model and size	Table width	Stroke length
TSL 90 M	90	50, 100, 150, 200, 250, 300
TSL120 M	120	100, 150, 200, 250, 300, 400, 500, 600
TSL170 M	170	150, 200, 250, 300, 400, 500
TSL170S M	170	300, 400, 500, 600, 800, 1 000
TSL220 M	220	300, 400, 500, 600, 800, 1 000

4 Designation of motor attachment

As for a motor attachment, select it from the list of Table 2.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 3 is mounted on the main body before shipment. However, the final position adjustment should be performed by customer since it is only temporarily fixed.
- When specifying an AC servomotor attachment, an origin sensor is not provided.

5 Ball screw lead

5: Lead 5mm
10: Lead 10mm

Major product specifications

Driving method	Precision ball screw
Linear motion rolling guide	Linear Way（ball type）
Built-in lubrication part	Lubrication part "C-Lube" is built-in
Material of table and bed	Cast iron
Sensor	Provided as standard

Accuracy

unit: mm

Positioning repeatability	±0.002
Positioning accuracy	0.010～0.035
Lost motion	–
Parallelism in table motion A	0.010～0.035
Parallelism in table motion B	–
Attitude accuracy	–
Straightness	0.005～0.025
Backlash	0.001

Points

● High precision, high rigidity positioning table

1 High precision, high rigidity positioning table configured with high rigidity and vibration damping performance cast iron slide tables and beds.

● High running accuracy and positioning accuracy

2 High running accuracy and high accuracy positioning are realized by incorporating 2 sets of Linear Way in parallel on cast iron slide tables and beds finished by accurate ground and combining with precision ball screws.

● High rigidity and large carrying mass

3 The structure with large carrying mass, and resistant to moment and complex load since 2 sets of Linear Way are optimally positioned on the high rigidity bed.

Identification Number and Specification

1 Model

TSLH···M: Precision Positioning Table LH (single-axis specification)

2 Size

Size indicates table width.
Select a size from the list of Table 1.

3 Stroke length

Select a stroke length from the list of Table 1.

As for a table with bellows, available stroke length is somewhat shorter, so please see the dimension table.

Table 1 Sizes, table width dimensions, and stroke lengths unit: mm

Model and size	Table width	Stroke length
TSLH120M	120	100, 150, 200, 250, 300
TSLH220M	220	150, 200, 250, 300, 400 (500, 600)
TSLH320M	320	300, 400, 500 (600, 800, 1 000)
TSLH420M	420	500, 600, 800 (1 000)

Remark: If the stroke length shown in ( ) is needed, please contact IKO.

4 Designation of motor attachment

As for a motor attachment, select it from the list of Table 3.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 4 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.
- When specifying an AC servomotor attachment, an origin sensor is not provided.

5 Ball screw lead

5: Lead 5mm
10: Lead 10mm

6 Designation of bellow

No symbol: Without bellows
J : With bellows

As for a table with bellows, available stroke length is somewhat shorter, so please see the dimension table.

7 Surface treatment

No symbol: Black chrome surface treatment
R : Black chrome surface treatment 1
L : Black chrome surface treatment 2

Black chrome surface treatment: This treatment is performed on main parts excluding Linear Way, ball screw, and ball bearing.
Black chrome surface treatment 1: In addition to the above black chrome surface treatment, this treatment is performed even on the surface of Linear Way.
Black chrome surface treatment 2: In addition to the above black chrome surface treatment 1, this treatment is performed even on the surface of ball screw.
The black chrome surface treatment improves the corrosion resistance by forming black permeable film on the surface.
For the upper and lower surfaces of the main body and the reference surfaces of respective parts, surface treatment is excluded.

Identification Number and Specification

1 Model

CTLH···M: Precision Positioning Table LH (two-axis specification)

2 Size

Size indicates table width.
Select a size from the list of Table 2.

Tables of different sizes can also be combined.

3 X-axis stroke length

Select a stroke length from the list of Table 2.

4 Y-axis stroke length

Stroke lengths of respective axes are displayed in cm. Please note that allowable lengths for X- and Y-axes vary. As for a table with bellows, available stroke length is somewhat shorter, so please see the dimension table.

Table 2 Sizes, table width dimensions, and stroke lengths unit: mm

Model and size	Table width	Stroke length	
		X-axis	Y-axis
CTLH120M	120	100	100
		200	100
		200	200
		300	200
		300	300
CTLH220M	220	200	200
		300	200
		300	300
		400	300
		400	400
CTLH320M	320	300	300
		400	300
		400	400
		500	400
		500	500

5 Designation of motor attachment

As for a motor attachment, select it from the list of Table 3.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 4 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.
- When specifying an AC servomotor attachment, an origin sensor is not provided.

6 Ball screw lead

5: Lead 5mm
10: Lead 10mm

7 Designation of bellow

No symbol: Without bellows
J : With bellows

As for a table with bellows, available stroke length is somewhat shorter, so please see the dimension table.

8 Surface treatment

No symbol: Black chrome surface treatment
R : Black chrome surface treatment 1
L : Black chrome surface treatment 2

Black chrome surface treatment: This treatment is performed on main parts excluding Linear Way, ball screw, and ball bearing.
Black chrome surface treatment 1: In addition to the above black chrome surface treatment, this treatment is performed even on the surface of Linear Way.
Black chrome surface treatment 2: In addition to the above black chrome surface treatment 1, this treatment is performed even on the surface of ball screw.
The black chrome surface treatment improves the corrosion resistance by forming black permeable film on the surface.
For the upper and lower surfaces of the main body and the reference surfaces of respective parts, surface treatment is excluded.

9 Designation of combination direction

No symbol: Standard configuration
C : Reverse configuration

Standard configuration: A direction under the condition where X-axis motor side is placed at the front and Y-axis motor side is placed on the right side respectively.
Reverse configuration: A direction under the condition where X-axis motor side is placed at the front and Y-axis motor side is placed on the left side respectively.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

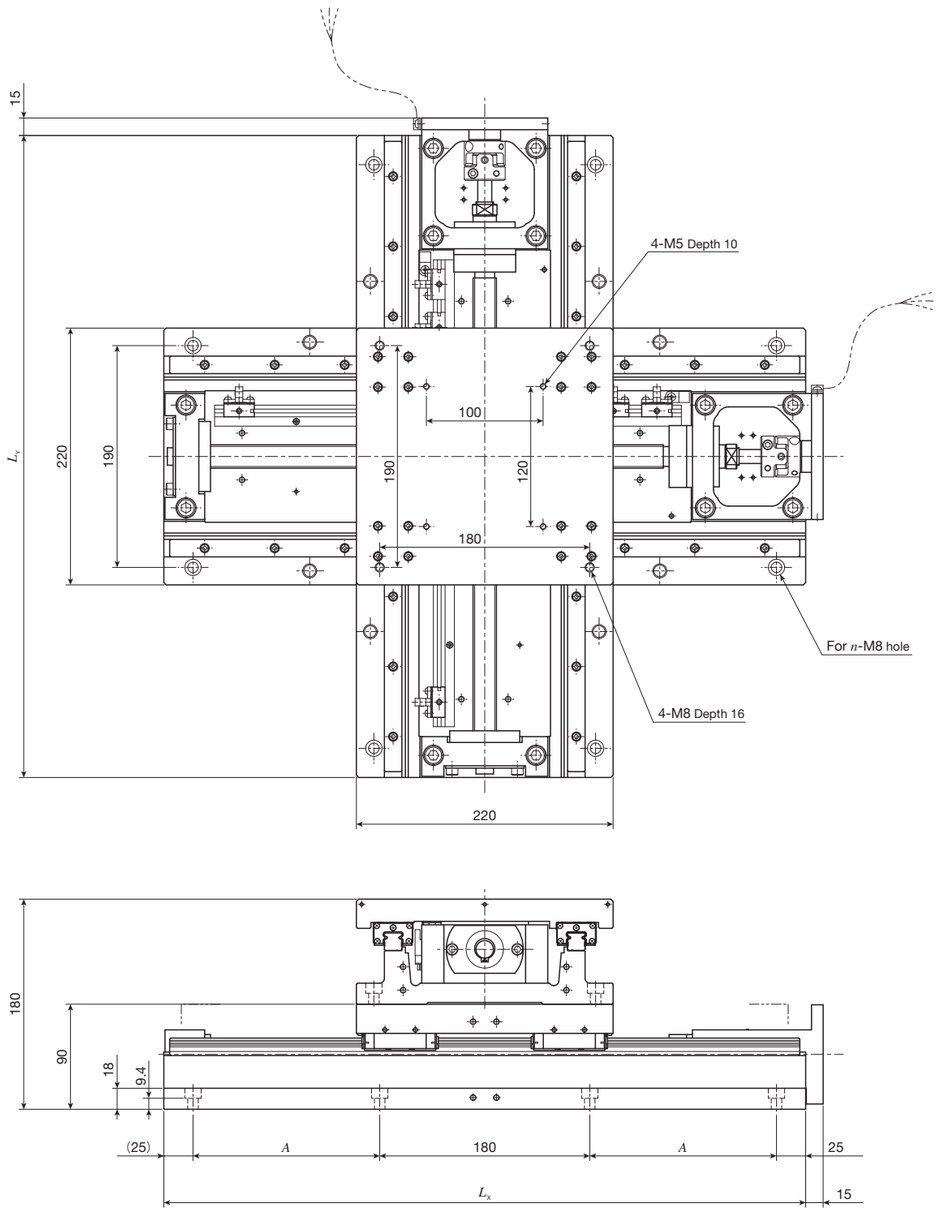
Identification number	Stroke length S		Overall length		Mounting holes of bed	Mass (Ref.)
	X-axis	Y-axis	L_X	L_Y	A	kg
CTLH120M-1010	100	100	275	275	75	20
CTLH120M-2010	200	100	375	275	125	22
CTLH120M-2020	200	200	375	375	125	24
CTLH120M-3020	300	200	475	375	175	26
CTLH120M-3030	300	300	475	475	175	28

Note (1) When selecting AT302 or AT308, 21mm is applied.
Remark: As a combination of stroke length other than listed above and a table of different size is possible, please contact IKO.

CTLH220M



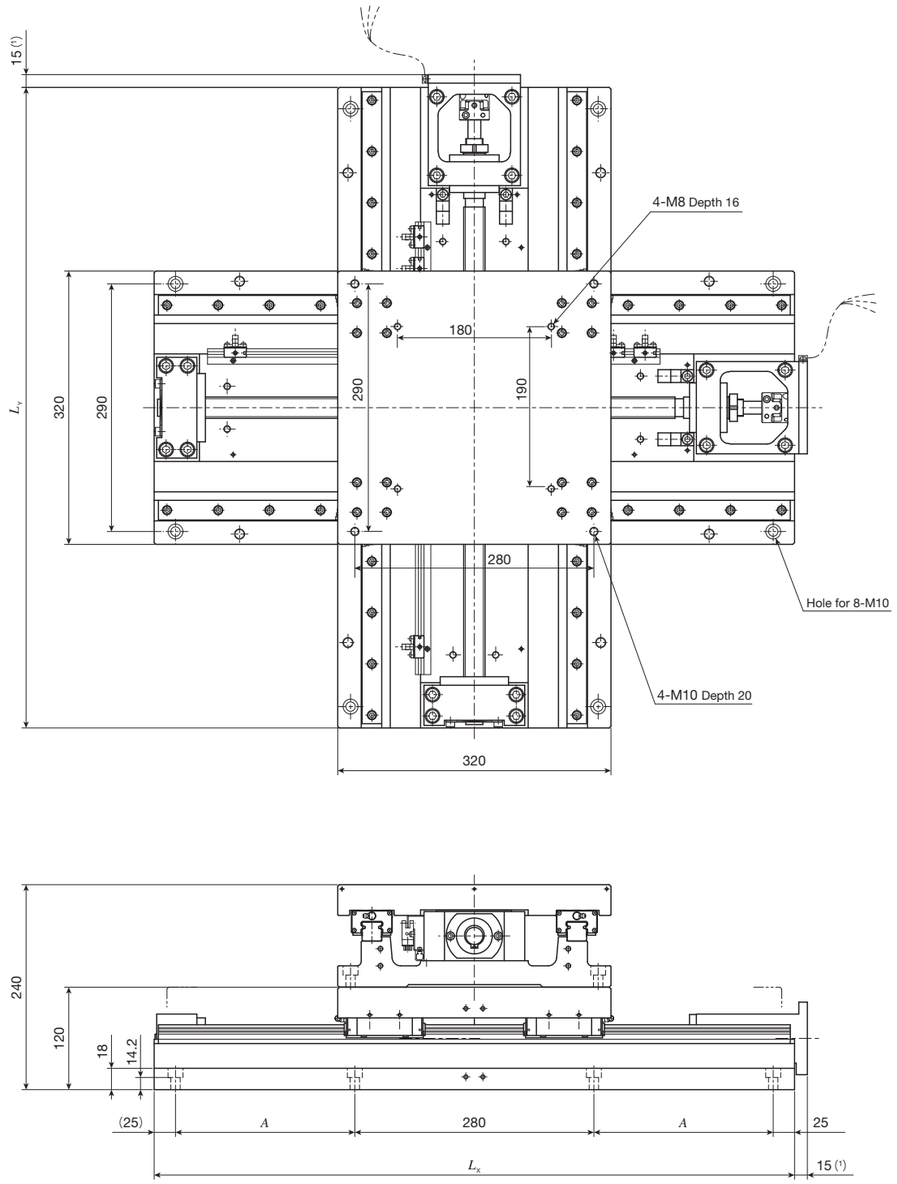
unit: mm

Identification number	Stroke length S		Overall length		Mounting holes of bed		Mass (Ref.)
	X-axis	Y-axis	L_X	L_Y	A (the number of holes×pitch)	n	kg
CTLH220M-2020	200	200	450	450	110	8	67
CTLH220M-3020	300	200	550	450	160	8	71
CTLH220M-3030	300	300	550	550	160	8	76
CTLH220M-4030	400	300	650	550	210 (2×105)	12	80
CTLH220M-4040	400	400	650	650	210 (2×105)	12	84

Remark: As a combination of stroke length other than listed above and a table of different size is possible, please contact IKO.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

CTLH320M

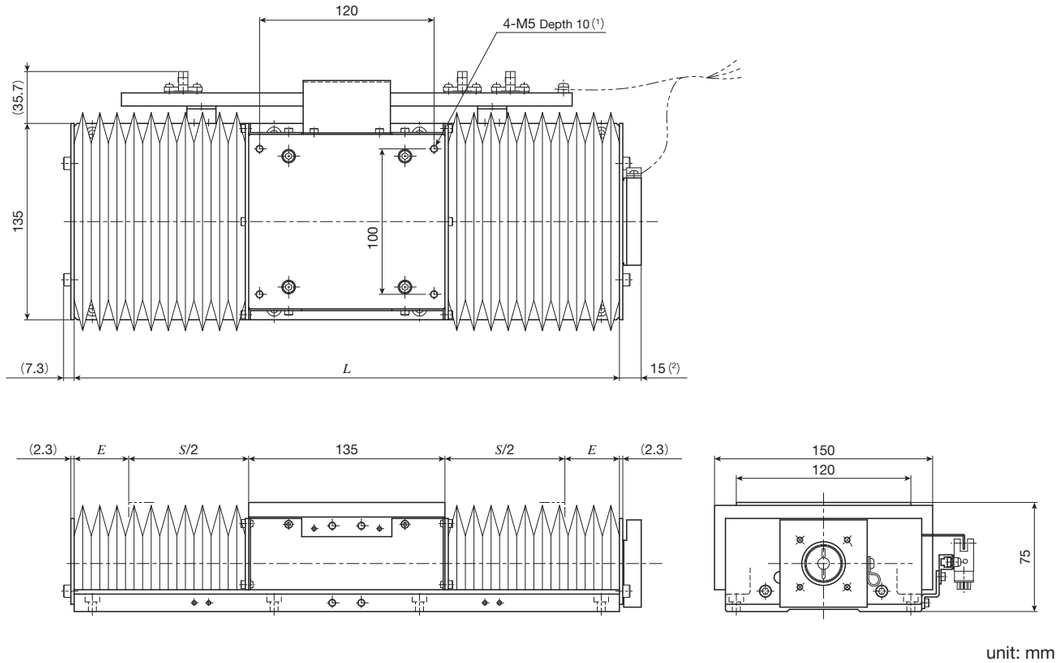


unit: mm

Identification number	Stroke length S		Overall length		Mounting holes of bed A	Mass (Ref.) kg
	X-axis	Y-axis	L_X	L_Y		
CTLH320M-3030	300	300	650	650	160	199
CTLH320M-4030	400	300	750	650	210	209
CTLH320M-4040	400	400	750	750	210	218
CTLH320M-5040	500	400	850	750	260	227
CTLH320M-5050	500	500	850	850	260	236

Note (1) When selecting AT305, 26mm is applied. When selecting AT313, 20mm is applied.
Remark: As a combination of stroke length other than listed above and a table of different size is possible, please consult IKO.

TSLH120M···/J Table with bellows



unit: mm

Identification number	Stroke length S	Overall length L	E	Mass (Ref.) kg
TSLH120M-100/J	85	275	27.5	13
TSLH120M-150/J	125	325	32.5	14
TSLH120M-200/J	165	375	37.5	15
TSLH120M-250/J	205	425	42.5	16
TSLH120M-300/J	240	475	50.0	17

Notes (1) Too deep insertion depth of the mounting bolt may affect the running performance of the moving table, so never insert a bolt longer than the depth of the through hole.
(2) When selecting AT302 or AT308, 21mm is applied.
Remarks 1. For the usage in vertical axis, the dimension of the bellows is different, so please contact IKO.
2. For bed mounting dimensions, see the dimension table for TSLH120M.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

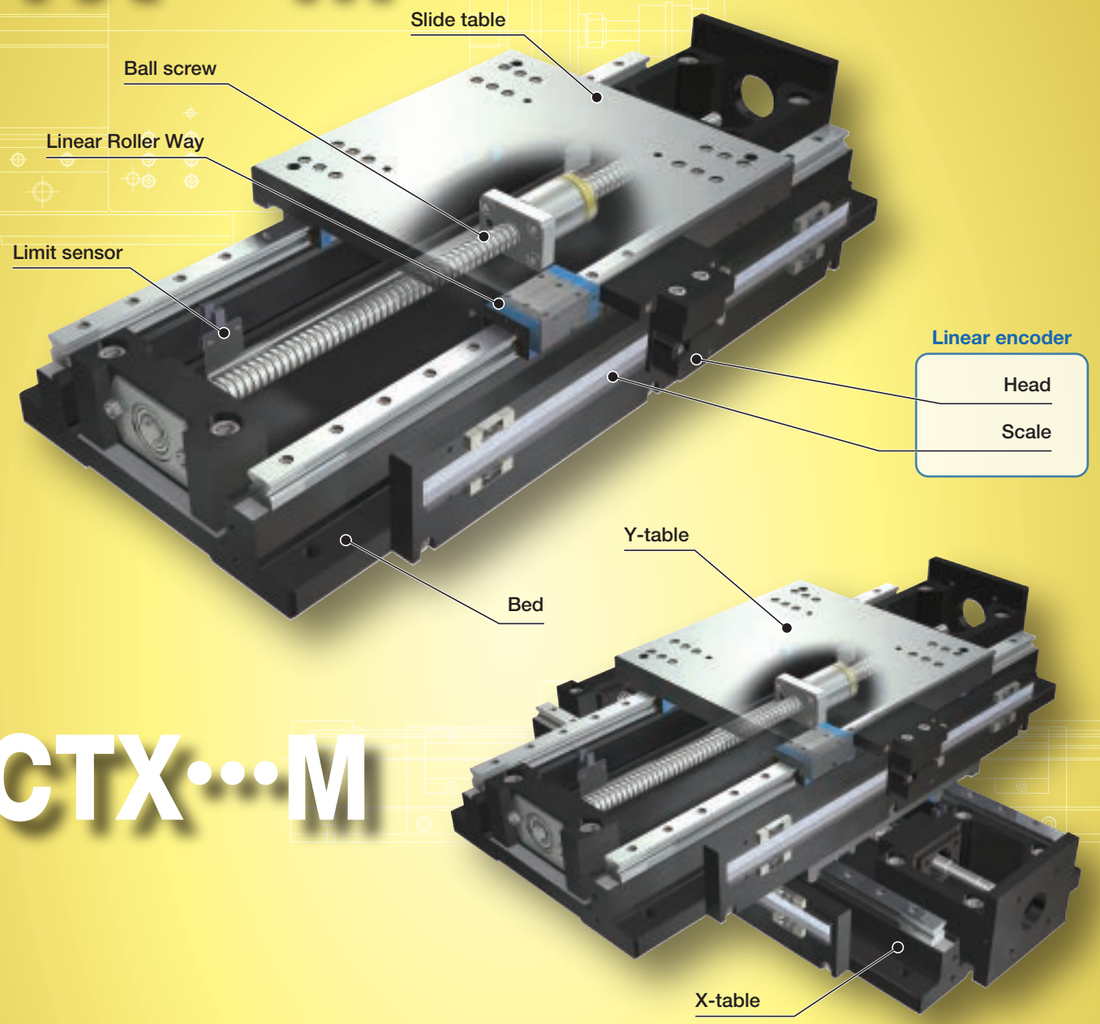
CTX…M

TX···M

Ball screw

Linear



CTX···M

Major product specifications

Driving method	Precision ball screw
Linear motion rolling guide	Linear Roller Way（roller type）
Built-in lubrication part	Lubrication part "C-Lube" is built-in
Material of table and bed	Cast iron
Sensor	Provided as standard

Accuracy

unit: mm

Positioning repeatability	±0.0005～0.0010
Positioning accuracy	0.003～0.020
Lost motion	0.001
Parallelism in table motion A	0.005～0.011
Parallelism in table motion B	–
Attitude accuracy	5～11sec
Straightness	0.003～0.008
Backlash	–

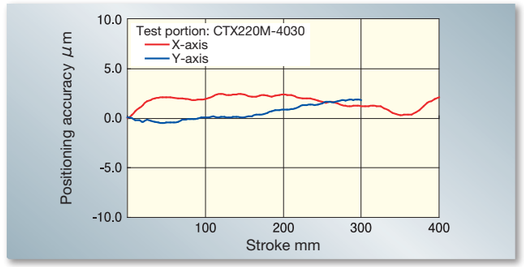
Points

● Ultimate high accuracy table of rolling guide type

1 High precision, high rigidity Precision Positioning Table LH based positioning table with positioning accuracy almost the same as Air Stage with ultimate rolling guide C-Lube Linear Roller Way Super MX incorporated and by a thorough investigation of the accuracy of each part.

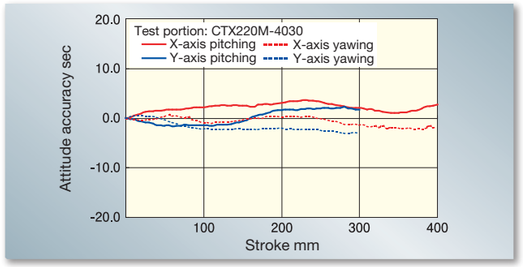
● High positioning accuracy and resolution performance realized with an onboard super high accuracy linear encoder

2 Fully closed loop control is configure and the positioning accuracy of the entire stroke is guaranteed with a direct feed back of positional information from a super high accuracy linear encoder with resolution of 0.016μm.



● Ultimate high running performance produced by adopting roller type linear motion rolling guide

3 Ultimate running accuracy is achieved since components processed and assembled with high accuracy are combined with C-Lube Linear Roller Way Super MX that exhibits the highest level of running performance with a rolling guide.



● Simple system configuration is available

4 System configuration is made simple, and space saving and cost reduction of the device can be realized since air supply device for driving is not required like Air Stage.

Variation

Shape	Model and size	Table width (mm)	Stroke length（mm）

Identification Number

Example of an Identification Number (Single-axis specification)

1	2	1		3		4	5	6
TX	220	M	-	150	/	AT402	10	0

1 Model — Page Ⅱ-147

2 Size — Page Ⅱ-147

3 Stroke length — Page Ⅱ-147

4 Designation of motor attachment — Page Ⅱ-147

5 Ball screw lead — Page Ⅱ-147

6 Designation of linear encoder — Page Ⅱ-147

Identification Number and Specification

1 Model

TX···M: Super Precision Positioning Table TX (single-axis specification)

2 Size

Size indicates table width.
Select a size from the list of Table 1.

3 Stroke length

Select a stroke length from the list of Table 1.

4 Designation of motor attachment

As for a motor attachment, select it from the list of Table 3.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 4 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.

5 Ball screw lead

5: Lead 5mm
10: Lead 10mm

6 Designation of linear encoder

No symbol : Without linear encoder
0 : Resolution 0.0156 to 0.500μm
(For AC servomotor manufactured by YASKAWA ELECTRIC CORPORATION)
1 : Resolution 0.1 to 0.2μm
(AC servomotors manufactured by Mitsubishi Electric Corporation and Panasonic Corporation)
2 : Resolution 0.01 to 0.05μm
(AC servomotors manufactured by Mitsubishi Electric Corporation and Panasonic Corporation)

When specifying the attachment for a stepper motor, set "No symbol".
For details on the resolution, please see the section of maximum speed.
For linear encoder specification, please see Table 10.

Identification Number

Example of an Identification Number (Two-axis specification)

1	2	1	3	4		5	6	7	8
CTX	120	M	- 30	20	/	AT401	5	C	0

1 Model — Page Ⅱ-148

2 Size — Page Ⅱ-148

3 X-axis stroke length — Page Ⅱ-148

4 Y-axis stroke length — Page Ⅱ-148

5 Designation of motor attachment — Page Ⅱ-148

6 Ball screw lead — Page Ⅱ-148

7 Designation of combination direction — Page Ⅱ-148

8 Designation of linear encoder — Page Ⅱ-148

Identification Number and Specification

1 Model

CTX···M: Super Precision Positioning Table TX (two-axis specification)

2 Size

Size indicates table width.
Select a size from the list of Table 2.
Tables of different sizes can also be combined.

3 X-axis stroke length
4 Y-axis stroke length

Select a stroke length from the list of Table 2.
Stroke lengths of respective axes are displayed in cm. Different stroke lengths can be specified for X- and Y-axes.

5 Designation of motor attachment

As for a motor attachment, select it from the list of Table 3.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 4 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.

6 Ball screw lead

5: Lead 5mm
10: Lead 10mm

7 Designation of combination direction

No symbol : Standard configuration
C : Reverse configuration

Standard configuration: A direction under the condition where X-axis motor side is placed at the front and Y-axis motor side is placed on the right side respectively.
Reverse configuration: A direction under the condition where X-axis motor side is placed at the front and Y-axis motor side is placed on the left side respectively.
Specify "No symbol" if 200mm is selected for Y-axis stroke length for CTX220M.

8 Designation of linear encoder

No symbol : Without linear encoder
0 : Resolution 0.0156 to 0.500μm
(For AC servomotor manufactured by YASKAWA ELECTRIC CORPORATION)
1 : Resolution 0.1 to 0.2μm
(AC servomotors manufactured by Mitsubishi Electric Corporation and Panasonic Corporation)
2 : Resolution 0.01 to 0.05μm
(AC servomotors manufactured by Mitsubishi Electric Corporation and Panasonic Corporation)
When specifying the attachment for a stepper motor, set "No symbol".
For details on the resolution, please see the section of maximum speed.
For linear encoder specification, please see Table 10.

Backlash	0.005

Points

Light weight, low profile and compact clean table

1 Positioning table of a structure with enhanced sealing property inside the table, based on light weight, low profile and compact Precision Positioning Table TE. Thanks to optimal design of linear motion rolling guide and ball screws, low cross sectional height as low as 50mm for TC50EB, 54mm for TC60EB and 67mm for TC86EB is realized. Since the sensor is designed to be directly mounted into the mounting groove, it contributes to space saving.

High corrosion resistance

3 Anodized high-tension aluminum alloy and stainless steel (stainless sheet) are used in main components to ensure excellent corrosion resistance.

Compatible with cleanliness class 3 Page Ⅱ-167

2 Press the stainless sheet against the side cover using the resin roller within the slide table, securely absorb it with a strong magnet sheet and seal the drive parts and slide table guiding parts. Dust-generation in proximity is prevented by sucking air from an enclosed space and class 3 cleanliness rating based on IKO measurement method is realized. Low dust-generation grease CGL for clean environment is contained in slide table guiding parts and ball screws to suppress dust-generation.

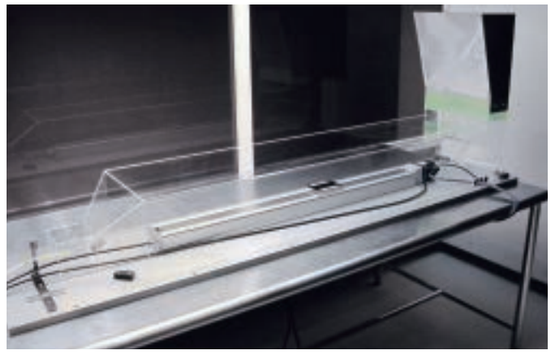
About measurement of cleanliness

Cleanliness refers to classified air cleanliness levels based on size (particle diameter) and quantity of suspended particulates per unit volume.
IKO measures cleanliness by following the procedures.

● Measuring condition

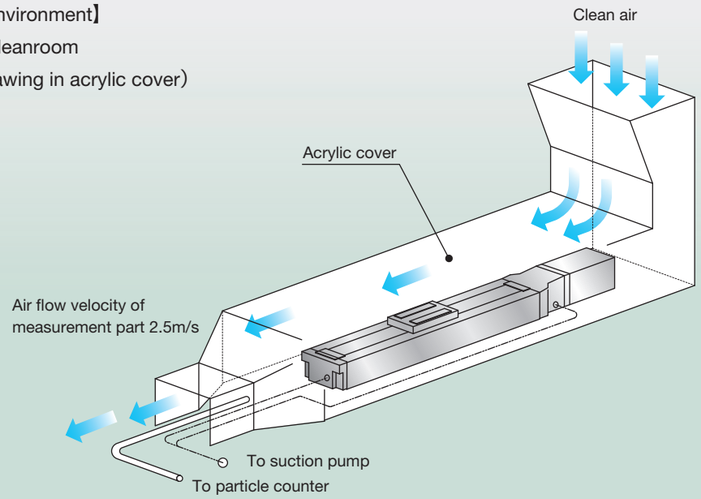
Item	Content
Measuring equipment	Particle counter
Air flow velocity of measurement part	2.5m/s
Measured air quantity	28.3L （1cf）
Measurement time	48h（10min/measurement, 1measurement/h）

● Appearance of test device



● Outline of test device

【Measurement environment】
Clean bench in cleanroom
(clean air withdrawing in acrylic cover)



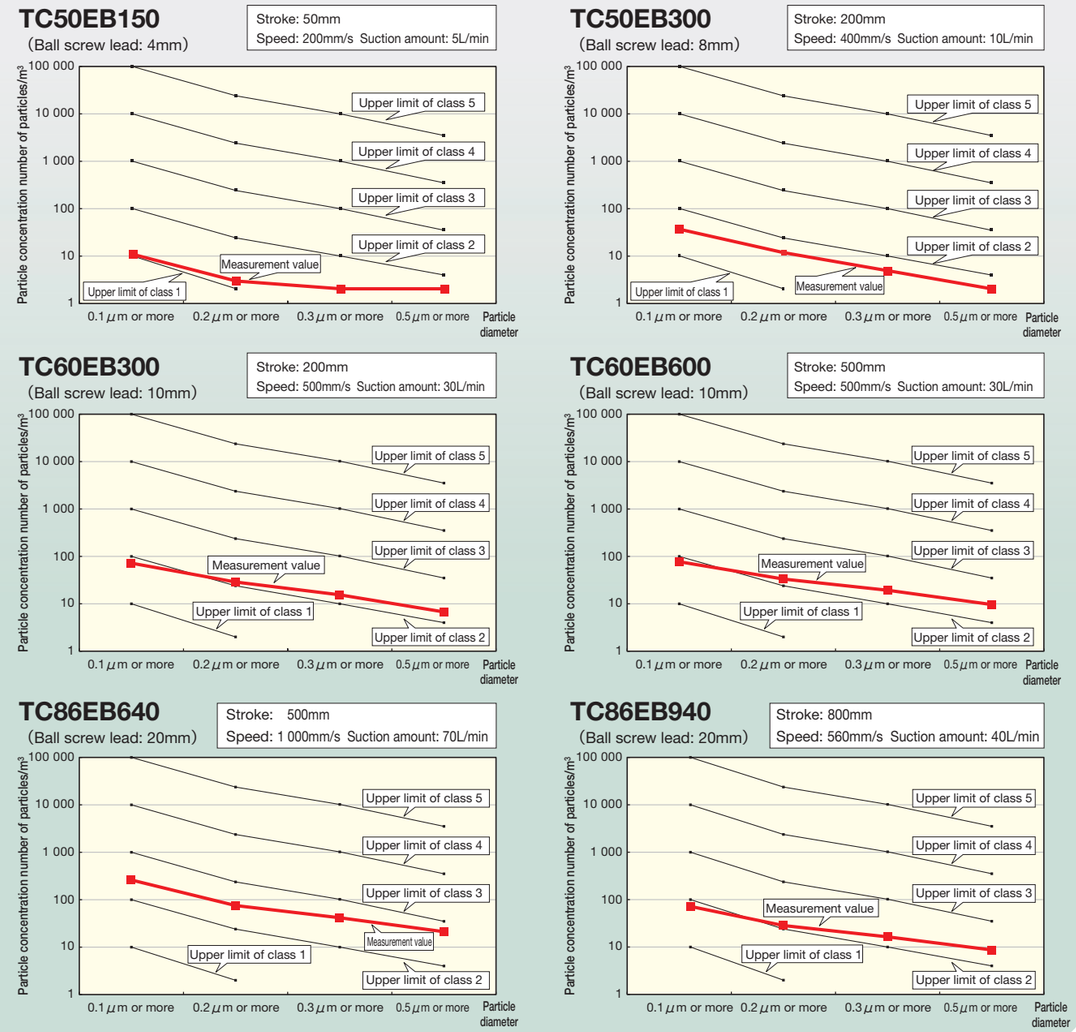
● Upper concentration limit of each cleanliness class (JIS B 9920 : 2002, ISO 14644-1: 1999)

unit: number of particles/m^3

Cleanliness	Particle diameter			
	0.1μm or larger	0.2μm or larger	0.3μm or larger	0.4μm or larger
Class 1	10	2	—	—
Class 2	100	24	10	4
Class 3 (Federal Standard 209D Class 1)	1 000	237	102	35
Class 4 (Federal Standard 209D Class 10)	10 000	2 370	1 020	352
Class 5 (Federal Standard 209D Class 100)	100 000	23 700	10 200	3 520
Class 6 (Federal Standard 209D Class 1000)	1 000 000	237 000	102 000	35 200

Actual measurement data of cleanliness

● Example of measurement data [Upper concentration limit chart for each cleanliness class]



● Measurement result of cleanliness

Model and size	Bed length	Ball screw lead mm	Stroke length mm	Speed mm/s	Suction amount L/min	Cleanliness class (JIS B 9920:2002, ISO 14644-1: 1999)
TC50EB	150	4	50	200	5	Class 2
	200	4	100	200	10	Class 2
	300	8	200	400	10	Class 2
TC60EB	150	5	50	250	30	Class 3
	300	10	200	500	30	Class 3
	600	10	500	500	30	Class 3
TC86EB	340	10	200	500	30	Class 3
	640	10	500	500	40	Class 3
	640	20	500	1 000	70	Class 3
	940	20	800	560	40	Class 3

Remark: Cleanliness varies depending on operating environment and operating conditions.

TC···EB: Cleanroom precision positioning table TC

2 Size

Size indicates bed width.
Select a size from the list of Table 1.

3 Bed length

Select a bed length from the list of Table 1.

Table 1 Sizes, bed widths, and bed lengths

unit: mm

Model and size	Bed width	Bed length (stroke length)						
TC50EB	50	150(50)	200(100)	250(150)	300(200)	–	–	–
TC60EB	60	150(50)	200(100)	300(200)	400(300)	500(400)	600(500)	–
TC86EB	86	340(200)	440(300)	540(400)	640(500)	740(600)	840(700)	940(800)

4 Designation of motor attachment

AT500: Without motor attachment
To specify the motor attachment, select it from the list of Table 2.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- If motor attachment is specified, a coupling shown in Table 3 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.
- For a product without motor attachment (AT500), no coupling is attached.

5 Ball screw lead

4: Lead 4mm (applied to TC50EB)
5: Lead 5mm (applied to TC60EB)
8: Lead 8mm (applied to TC50EB)
10: Lead 10mm (applied to TC60EB and TC86EB)
20: Lead 20mm (applied to TC86EB)

6 Specification of sensor

0: Without sensor
2: Two units of sensor mounted (limit)
3: Three units of sensor mounted (limit, pre-origin)
4: Four units of sensor mounted (limit, pre-origin, origin)
5: Two sensors attached (limit)
6: Three sensors attached (limit and pre-origin)
7: Four sensors attached (limit, pre-origin, origin)

If sensor mounting (symbol 2, 3, or 4) is specified, the sensor is mounted into the mounting groove on the side cover, and two detecting plates are attached onto the slide table.
If sensor attachment (symbol 5, 6, or 7) is specified, mounting screws and nuts for sensor are provided in addition to the specified number of sensors, and two detecting plates are attached onto the slide table.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Straightness	–
Backlash	–

Points

● Ground ball screw drive realizes ultra-small positioning table with sectional height of 20mm and width of 17mm.

1 Incorporating a Micro Linear Way L of 2mm in rail width in the table guiding parts and a miniature ball screw of 2mm in diameter in the feeding mechanism, this is an unparalleled ultra-small size positioning table with ground ball screw drive type.

● Maximum table speed of 150mm/s is exerted.

2 Combination of high-lead ball screws and high-torque AC servomotors enables the table to move at high speed without reducing the accuracy.

● Table specification is selectable according to your use.

3 There are two types in the shape of slide table: standard table and long table. As two Micro Linear Way L with two slide units are incorporated in parallel into the long table, the table is structurally resistant to moment and complex load. The motor can be selected from two types of AC servomotor (standard type or high torque type) and stepper motor according to your use.

● Super small sensor can also be optionally built in.

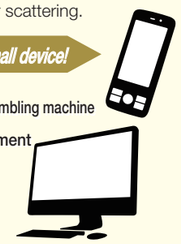
4 Respective built-in sensors (origin, pre-origin, CW, and CCW) can be designed without changing outside dimension.

☑ Widely applicable in such fields as below!

Featuring the ultra-small size yet super precision positioning capability, this table is best suited to enhancing the accuracy of the positioning mechanism of super small device. And, use of stainless steel in steel parts allows the table to be used even in a location where use of oil and grease should be preferably avoided and under the environment that tends to suffer from water scattering.

Best suited for positioning mechanism of super small device!

- Measuring equipment
- Electronic parts assembling machine
- Watch assembling machine
- Bio-related equipment
- Medical equipment
- Robot
- Winder etc....



☑ This table can respond to various requests!

We can prepare tables of various specifications such as switching table specification, lead screw specification, and stainless steel cover specification, in order to meet customer needs. For more information, please contact IKO.

Example of special specification: Switching table specification

Identification Number and Specification

1 Model

TM: Micro Precision Positioning Table TM

2 Size

15: Table width 15mm

3 Shape of slide table

No symbol: Standard table G: Long table

4 Effective stroke length

Select a effective stroke length from the list of Table 1.

Table 1 Shape of slide table and effective stroke length

Shape of slide table	Effective stroke length mm
Standard table	20、40、60
Long table	10、30、50

5 With motor type

A: With motor

6 Motor type

T001: AC servomotor（standard type）
T002: Stepper motor（five phases）
T003: Stepper motor（two phases）
T004: AC servomotor（high torque type）

When T004 is specified, the ball screw lead of 0.5mm in 7 cannot be specified.
For details of motor specification, see pages Ⅱ-188 and Ⅱ-191.
If you use a non-standard motor, contact IKO.

7 Ball screw lead

05: Lead 0.5mm
10: Lead 1.0mm
15: Lead 1.5mm

When the ball screw lead of 0.5mm is specified, T004: AC servomotor (high torque type) in 6 cannot be specified.

8 Specification of sensor

0: Without sensor
1: With sensor（on the right as viewed from the side opposite the motor）
2: With sensor（on the left as viewed from the side opposite the motor）

Once you select "Without sensor", adding a sensor afterward is not allowed.
If "With sensor" is selected, the directions of wirings for the motor and the sensor are the same direction.

Remark: A resin table cover is used but a stainless table cover can also be manufactured. If needed, please contact IKO.

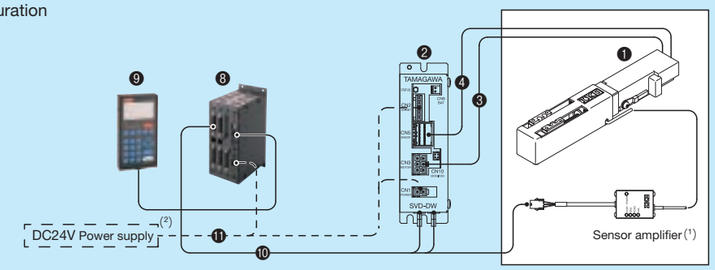
System Configuration

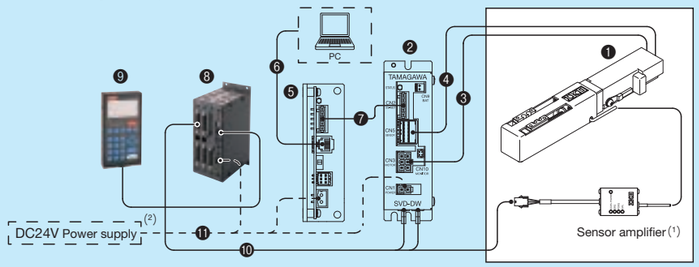
Dedicated driver for Micro Precision Positioning Table TM is provided. The following table shows its typical system configuration. For the specifications of the driver, please see the section of specifications of motor and driver on page Ⅱ-188 to Ⅱ-192. When you place an order, please specify desired model numbers from the list of following table.

Table 8 System configuration

● System configuration



● System configuration of setting driver parameters for AC servomotor



No.	Name	Model number			
		T001 AC servomotor (standard type)	T004 AC servomotor (high torque type)	T002 Stepper motor (five phases)	T003 Stepper motor (two phases)
❶	Motor code				
❷	Driver	TA8410N7318E936	TA8410N7318E951	TD-5M13-L	eTD-24A
❸	Motor cord	EU9614N□0		TAE20S6-SM0□ (TAE20S7-SN0□)	TAE20S8-SM0□ (TAE20S9-SN0□)
❹	Resolver cord	EU9615N□0		–	–
❺	Communication unit (3)	TA8433N211		–	–
❻	RS-232C cord (3)	EU6517N2		–	–
❼	SV-NET cord (3)	EU9610N20□0		–	–
❽	Programmable controller	CTN481G			
❾	Teaching box	TAE10M5-TB			
❿	Pulse cord and limit cord (4)	TAE10U5-LD0□ (TAE10U6-LD0□)		TAE10U7-LD0□ (TAE10U8-LD0□)	TAE10U9-LD0□ (TAE10V0-LD0□)
⓫	Power cord	This must be prepared by customer. (5)			This must be prepared by customer. (6)

Notes (1) Once you select "Without sensor", no sensor amplifier will be attached.
(2) DC24V power supply must be prepared separately by customer.
(3) This is required for in setting parameters. Please see the section of parameter setting for driver. For specifications of communication units, please see the section of specifications of communication unit for the AC servomotor T001 and T004 on page Ⅱ-190.
(4) If the customer uses any other programmable controller than CTN481G, the pulse cord and limit cord must be prepared by customer.
(5) Connectors are provided for the driver and the communication unit. Please see the section of specifications of motor and driver from page Ⅱ-188 to page Ⅱ-192.
(6) Connect the power cord directly.

Remarks 1. Cords indicated in ( ) for motor cord, pulse cord and limit cord, and resolver cord are highly bending resistance.
2. The lengths of motor cords, resolver cords, SV-NET cords, pulse cords and limit cords can be specified using the box (□) at the end of identification number. Up to 3m can be specified in steps of 1m.
(For 3m: EU9614N30, TAE10U5-LD03)
When you use cords in excess of 3 m in length, contact IKO.
3. The length of pulse cord portion of pulse cord and limit cord is 1.5 m.

●Parameter setting for driver

AC servomotor for driver is required initial setting of parameters. In parameter setting, communication unit, RS232C cord, and SV-NET cord are required. Please place an order separately. Software for setting up can be downloaded from the site of Tamagawa seiki Co., Ltd. at the following: URL: http://sv-net.tamagawa-seiki.com/download/download_menu.html
These cords can be shared with more than two drivers. Please place an order according to your requirement.

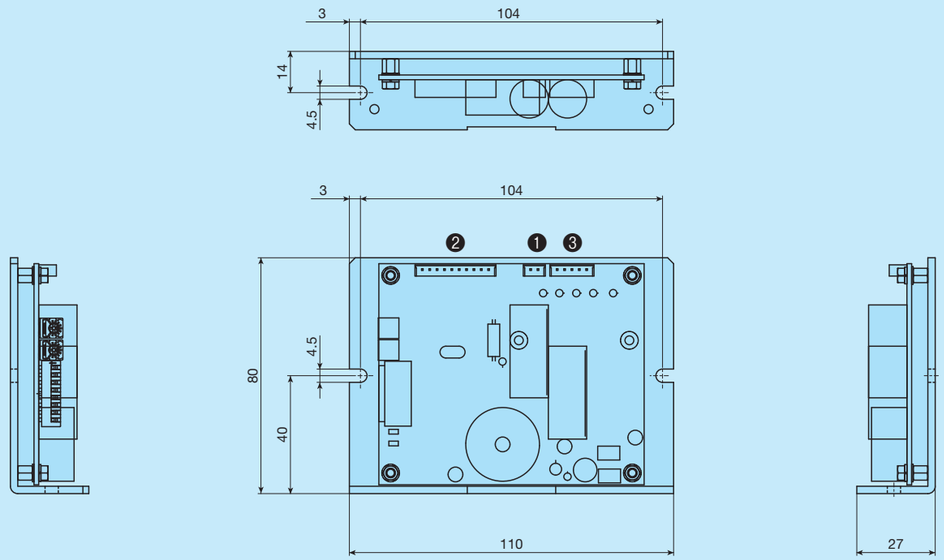
Remark: Connectors are manufactured by Molex Japan Co., Ltd.

Table 20 Driver for stepper motor T002 from Tohan Denshi Kiki Co.,Ltd. (RoHS compliant)



No.	Name		Function
❶	CN1	Power supply connector	Connect a power supply to this connector.
❷	CN2	I/O connector	Connect a pulse cord to this connector.
❸	CN3	Motor connector	Connect a motor cord to this connector.

Table 21 Specifications of driver for stepper motor T002

Model number of driver	TD-5M13-L
Applicable motor code	T002
Excitation type	Micro step Max. 500 divisions
Input method	Photo coupler Input resistance 220Ω
Input format	CW/CCW signal
	Pulse signal/rotational direction signal
Power input	DC15 to 35V 2.5A
Ambient temperature (in operation)	0～40℃ (keep freeze free)
Ambient humidity (in operation)	85% or lower (keep dewdrop free)
Mass kg	0.17

Remark: DC24V is recommended for power input. The power supply must be prepared by customer.

Major product specifications

Driving method	Precision ball screw
Linear motion rolling guide	Crossed Roller Way
Built-in lubrication part	No built-in
Material of table and bed	Cast iron
Sensor	Select by identification number

Accuracy

unit: mm

Positioning repeatability	±0.002～0.003
Positioning accuracy	0.005～0.025
Lost motion	–
Parallelism in table motion A	0.005～0.012
Parallelism in table motion B	0.015～0.030
Attitude accuracy	–
Straightness	–
Backlash	–

Points

● High precision and compact positioning table

1 High precision and compact positioning table incorporating Crossed Roller Way into high rigidity and vibration damping performance cast iron slide tables and beds.

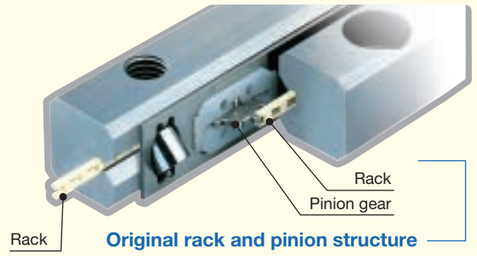
● Safety design with retainer creep proof function

2 Adoption of Anti-Creep Cage Crossed Roller Way that does not cause retainer creep in the linear motion rolling guide allows you to safely use the table even in vertical axis use and high acceleration / deceleration operation. (TS55/55 and CT55/55 are not included.)

● Optimal for works directly conducted on the table upper surface

3 Adoption of large precisely polished table allows you to use the entire table upper surface as work space.

Structure and features of Anti-Creep Cage Crossed Roller Way

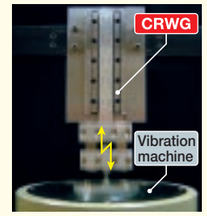


Original rack and pinion structure

No retainer creep even under high-tact operation in vertical axis !

《Durability test》 Test conditions

Model number	CRWG 3	
Test method	Vibration test machine	
Operating conditions	Posture	Vertical
	Maximum speed	827 mm/s
	Acceleration	15 G
	Cycle	31 Hz
	Stroke	8 mm
	Mass of moving table	330 g
Number of strokes	1 million strokes	



《Result》 No retainer creep nor material damage in any component is found.

Remark: For detailed coupling specifications, please see respective manufacturer's catalogs.

4 Ball screw lead

1: Lead 1mm (applicable to 55/55, 75/75, and 125/125)
2: Lead 2mm (not applicable to 55/55 or 75/75)
5: Lead 5mm (not applicable to 55/55 or 75/75)

5 Special specification

No symbol: Standard specification
AL : Aluminum alloy made table (not applicable to 55/55 or 75/75)
BE : Option base (applicable to 55/55)
LR : Black chrome surface treatment
SC : Table with sensor

Aluminum alloy made table : Specification in which the slide table, bed, and motor bracket are made of cast aluminum alloy. The accuracy is different from that of the standard specification.

Option base : Base plate is available for attaching the main body downward. For detailed information, please see the dimension table.

Black chrome surface treatment : A black permeable film is formed on the surface to improve corrosion resistance. This treatment is performed on the surfaces of slide table, bed, and motor bracket. For the reference surfaces of respective parts, surface treatment is excluded.

Table with sensors : A set of limit sensor, pre-origin sensor, and origin sensor is attached. However, when selecting an AC servomotor attachment, an origin sensor is not provided. Please use the C-phase or Z-phase of the encoder.

Remark: When using multiple special specifications for combination, please indicate by arranging supplemental codes in alphabetical order.

1N=0.102kgf=0.2248lbs.

Points

● High speed and long stroke positioning table

1 High speed movement-enabled and long stroke positioning table with highly durable and high-tensile steel cord-contained timing belt incorporated into the feeding mechanism of the slide table.

● Light weight and long stroke

2 Lightweight solution is achieved by adopting the slide table and bed made from high-strength aluminum alloy. Series of stroke length up to 1,200mm is available.

● Stable high running accuracy

3 Incorporation of two sets of Linear Way in parallel realized stable and high running performance.

Ultracompact, state-of-the-art linear motor table NT series!

Nano Linear NT is a moving magnet type linear motor table with extremely low profile.
For guiding parts of the moving table, Linear Way or Crossed Roller Way well-established in the area of miniature linear motion rolling guides is used in combination with linear motor and high-resolution linear encoder to realize highly accurate positioning.
Thanks to adoption of high-performance neodymium magnet, large thrust force can be acquired and therefore high-speed and highly responsive positioning is possible, despite its very small body. In addition, high cleanliness is realized as the mechanical contact part is only the linear motion rolling guide thanks to adoption of a landmark driving method without moving cables.

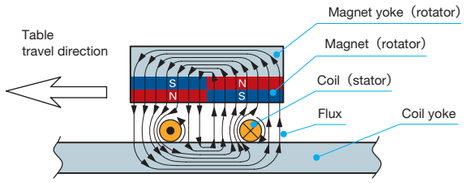
Operating principle of Nano Linear NT

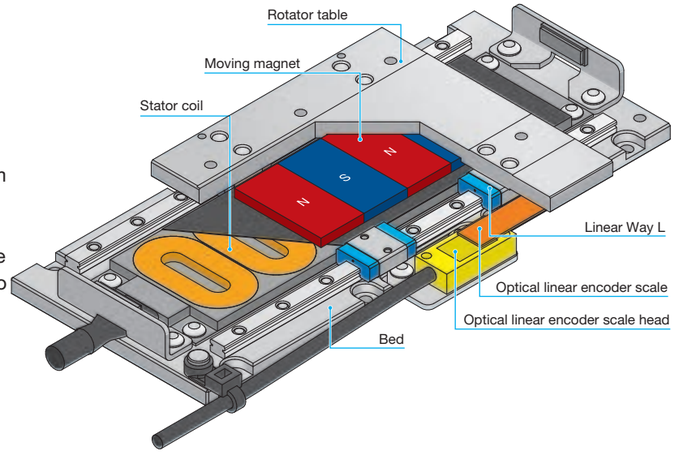
Nano Linear NT is structured with magnet and optical linear encoder scale deployed as a rotator, and an air-core coil and optical linear encoder scale head deployed as a stator within its compact body. As indicated in the right figure, the coil is subject to horizontal force due to flux that always works in vertical direction by the magnet and coil yoke, and rotational flux that is generated around the coil by the coil current (Fleming's left-hand rule). By switching the coil current to certain direction corresponding to the flux direction, continuous thrust force in a certain direction can be obtained and linear motions of the rotator is maintained. Traveling and accurate positioning are performed by acceleration control by current amount and feedback by linear encoder.



1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

NT···V [Standard type]

NT···V is a linear motor table with excellent cost effectiveness realized by use of Linear Way L for miniature linear motion rolling guide in the cable guiding parts, reduction of number of parts and review of parts shapes. NT38V10, the smallest in the series, is only 11mm in sectional height, 38mm in table width and 62mm in overall length. It contributes further miniaturization of positioning mechanism. Motion network EtherCAT compatible driver and SSCNETⅢ/H compatible driver are also available and smoother and higher speed and accuracy motions are realized by streamlined wiring.



Points

1 ● Ultracompact

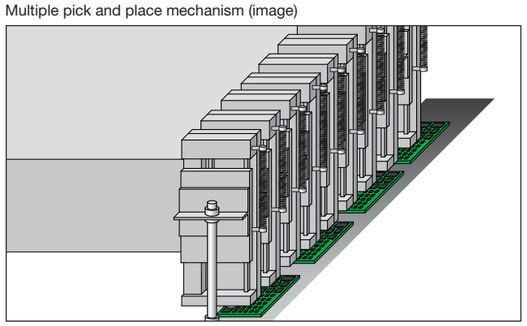
We pursued further miniaturization thoroughly. Especially, NT38V10, the smallest in the series, is only 11mm in sectional height, 38mm in table width and 62mm in overall length. The occupied space is not increased even when many tables are layered, so further miniaturization of the positioning mechanism is promoted.

Model and size	NT38V10	NT38V18	NT55V25	NT55V65	NT80V25	NT80V65	NT80V120
Sectional shape (mm)							

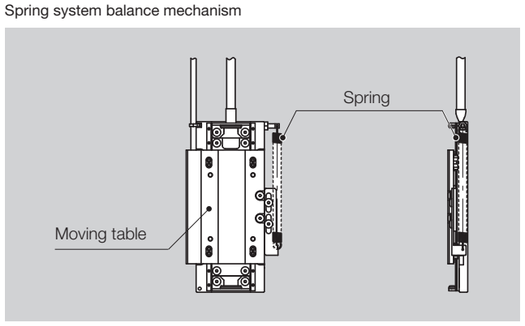
2 ● Compatible with vertical mounting structure

Falling of moving table in power shutdown is prevented by integration of individual spring system balance mechanism. Making use of low profile and compact characteristics of NT···V, multiple pick and place mechanism can be established.

Multiple pick and place mechanism (image)



Spring system balance mechanism



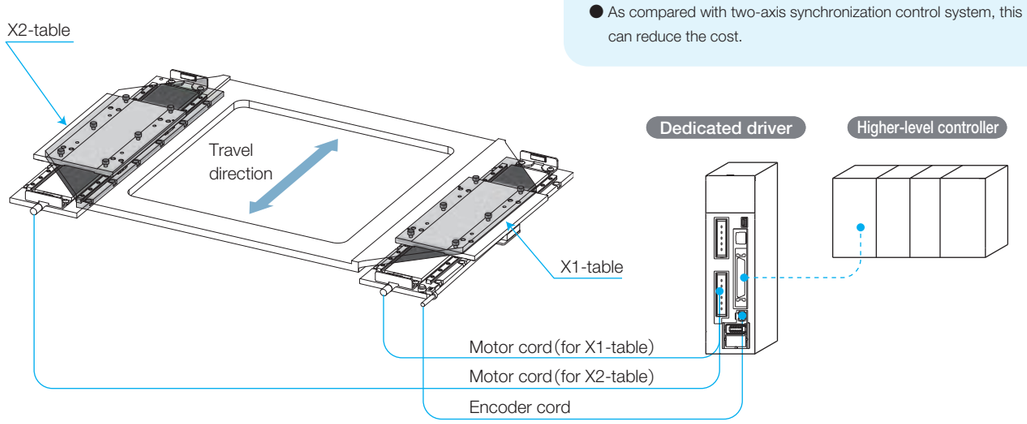
Remark: Vertical mounting structure is prepared based on respective usages. As we select spring according to your use conditions, please contact IKO.

3 ● Two-axis parallel operation

Performing rigid-connection of two units of NT···V arranged in parallel and driving with a single specific driver enables high thrust force and stable attitude accuracy.

Features of two-axis parallel operation

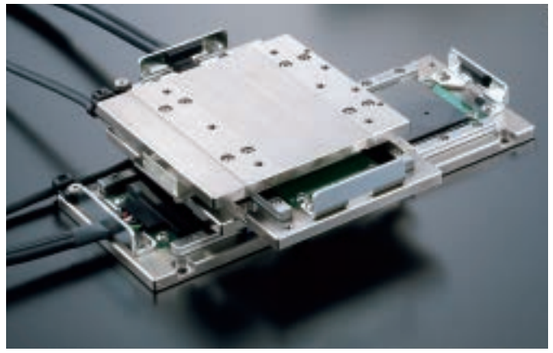
- Large thrust force can be obtained by two-axis driving.
- Driving right and left tables can minimize the table delay and flame torsion.
- Table delay and flame torsion are minimized, which ensures high positioning accuracy.
- As compared with two-axis synchronization control system, this can reduce the cost.

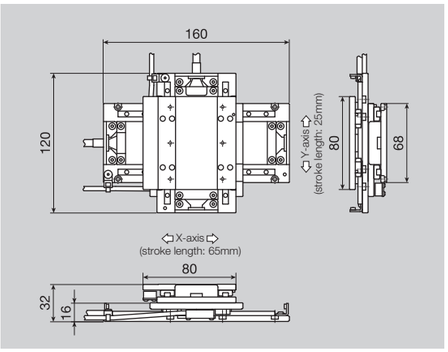


Remark: If two-axis parallel operation is required, please contact IKO.

4 ● XY two-axis combination specification

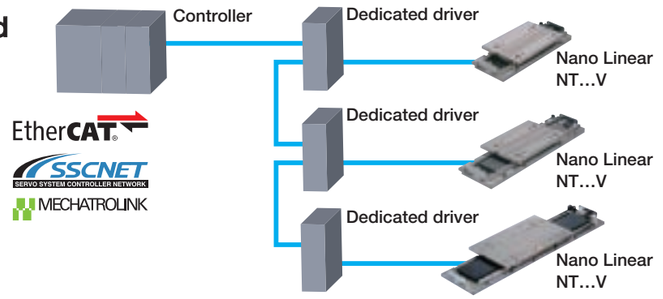
Two units of NT80V can be used in combination without any special attachment and XY-table with low profile can be easily established.





5 ● Motion network is supported

Drivers compatible with motion network EtherCAT, SSCNETⅢ/H , and MECHATROLINK are also available, so an advanced system with streamlined wiring can be configured.

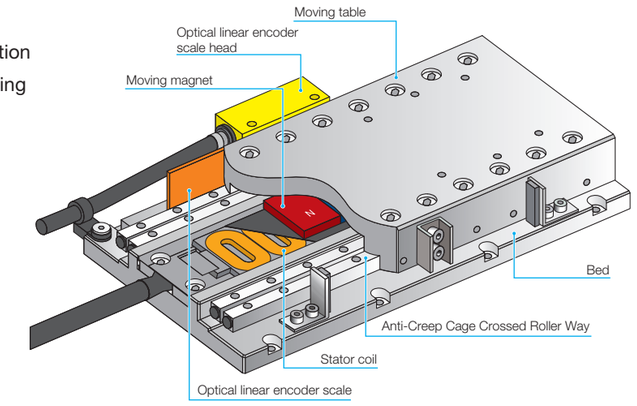


Remark: EtherCAT® is registered trademark and patented technology, licensed by BeckhoffAutomation GmbH, Germany.
SSCNETⅢ/H is a motion network communication system for servo system control developed by Mitsubishi Electric Corporation.
MECHATROLINK is an open field network controlled by MECHATROLINK Members Association.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

NT···H [High accuracy type]

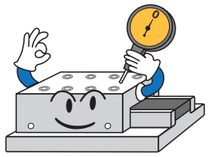
NT···H is a high-accuracy linear motor table that has realized high rigidity and smooth motions without pulsation comparative with air static pressure bearing by positioning accuracy and running straightness below 1 μm, using roller type Anti-Creep Cage Crossed Roller Way in the table guiding parts.

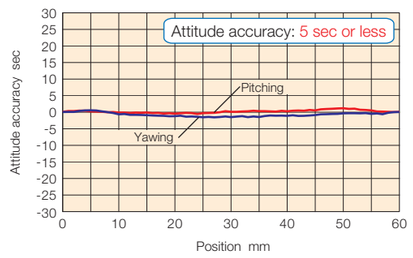


Points

1 ● High attitude accuracy

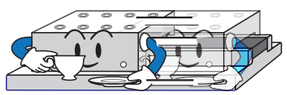
Combination of parts processed with high accuracy and Anti-Creep Cage Crossed Roller Way realizes attitude accuracy of 5 sec or less. Variations in attitude due to movement is minimized, which ensures high positioning repeatability.

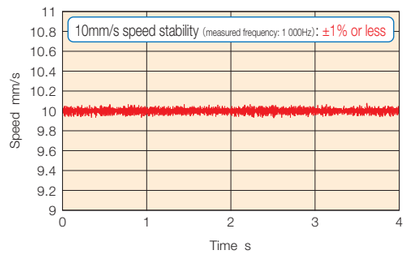




2 ● High speed stability

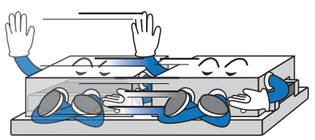
Speed stability is improved further thanks to smooth-motion Crossed Roller Way, coreless moving magnet type linear motor and high-performance servo driver.

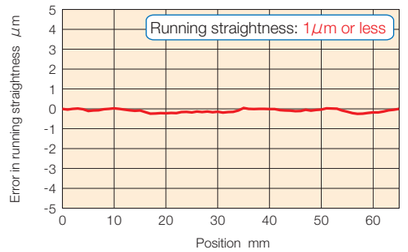




3 ● High running accuracy

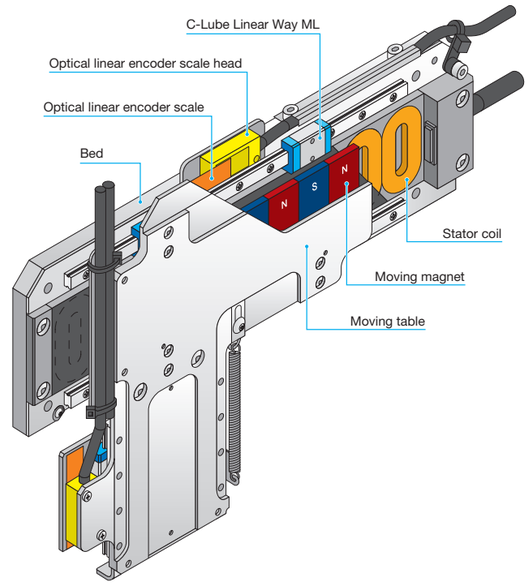
High running accuracy as good as less than 1 μm running straightness is realized by precise finishing and assembly of components.





NT···XZ [Pick and place unit]

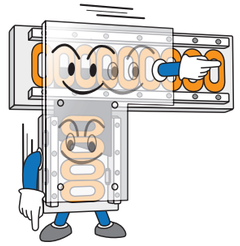
NT···XZ is a linear motor drive pick and place unit with ultra thin profile with 18mm thickness, realized by integrating X-axis moving table and Z-axis bed, using C-Lube Linear Way ML for miniature linear motion rolling guide in the table guiding parts. By entering a positioning program, you may set flexible operation patterns and change strokes according to works easily.



Points

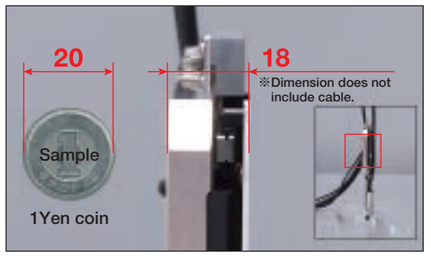
1 ● High-tact positioning

Pick and place unit of unparalleled structure with linear motor drive. Optical linear encoders are installed on both axes to realize accurate and high-tact positioning.



2 ● Ultrathin and space saving

Ultra thin profile of 18mm thickness is realized by integrating X-axis moving table and Z-axis bed. Parallel install of four units in a space of 100mm width is possible, and such space saving arrangement contributes to improvement of efficiency.



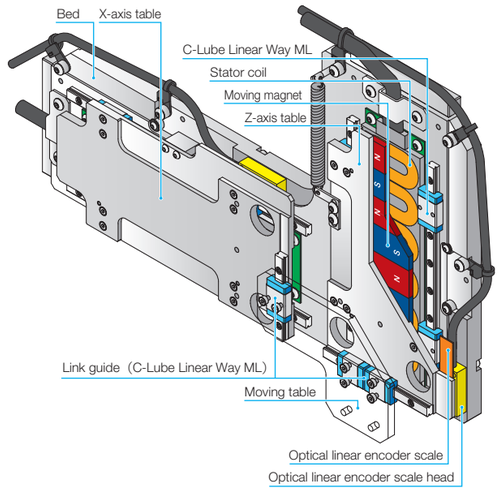
3 ● Operation monitoring function

The track can be verified from PC by using the driver monitoring function.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

NT···XZH [High thrust pick and place unit]

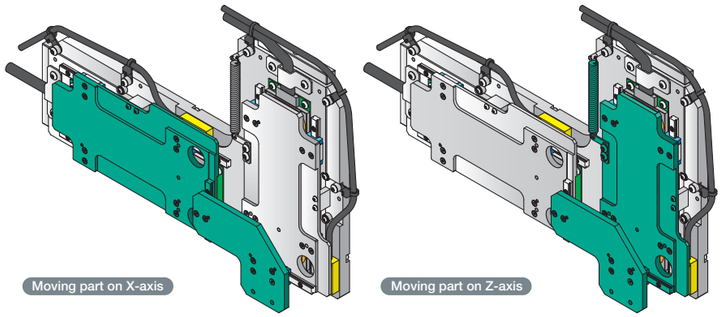
NT···XZH is a linear motor drive high thrust pick and place unit with compact integral X- and Z- axis, using C-Lube Linear Way ML for miniature linear motion rolling guide in the table guiding parts. Thanks to adoption of a system to drive moving table by using a link mechanism, it realizes both higher thrust force of the linear motor and weight reduction of the moving parts and reduces tact time. By entering a positioning program, you may set flexible operation patterns and change strokes according to works easily.

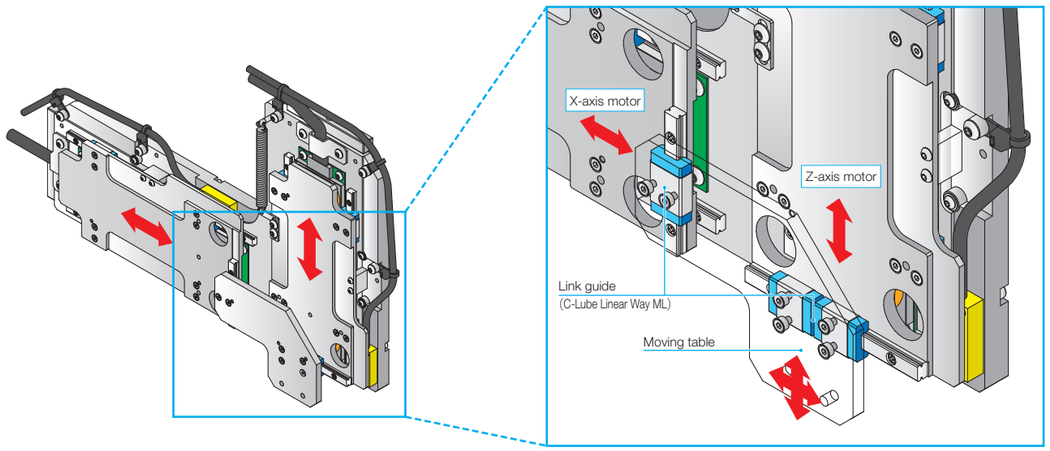


Points

1 ● High thrust and high tact

Thanks to X- and Z-axis motor located on the flat surface and adoption of a system to drive moving table by using a link mechanism, it realizes both higher thrust force of the linear motor and weight reduction of the moving parts and significantly reduces tact time.





2 ● High resolution and high responsiveness

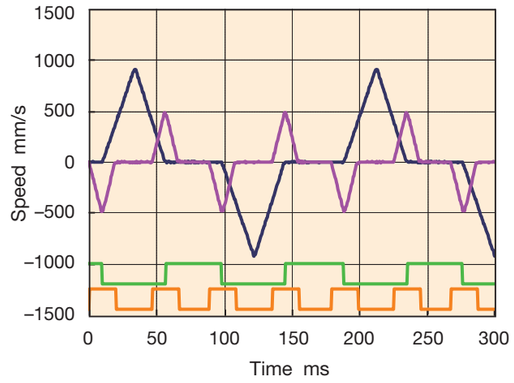
Performing fully-closed loop control by incorporating an optical linear encoder in both axes enables high resolution and high response.

Measuring condition

NT90XZH2510/5	
Effective thrust force	: X-axis; 14.8 N, Z-axis; 15.7 N
Carrying mass	: 150 g
Stroke	: X-axis; 22 mm, Z-axis; 5 mm
Acceleration / deceleration time	: X-axis; 24 ms, Z-axis; 9 ms

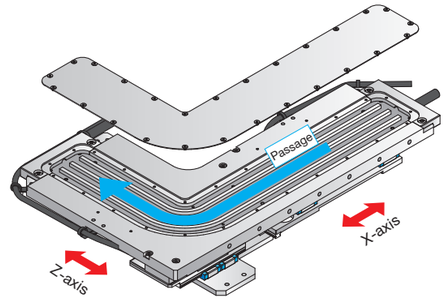
Enables high-speed positioning!

Settling time: 2 ms, Number of cycles: 334 times/min

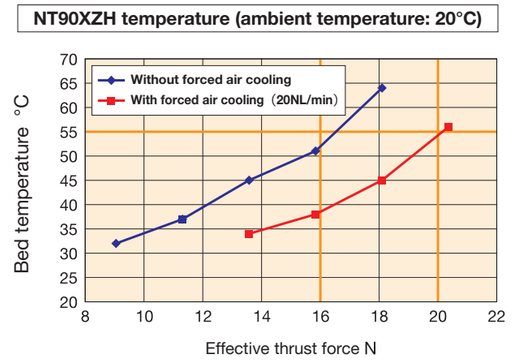


3 ● Air cooling

With the structure that heat-generating coils are converged at the stator, cooling and heat discharge to the mounting base are easy. When the air cooling option is specified, tact time can be shortened further.

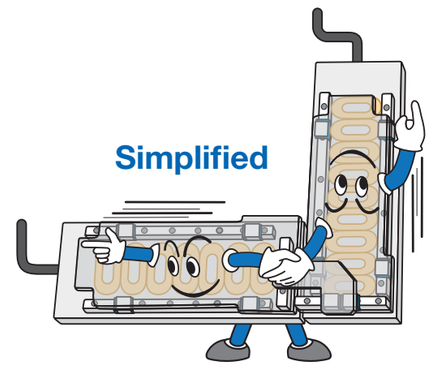


NT90XZH temperature (ambient temperature: 20°C)



4 ● Cableless moving parts

Though it is multi-axial unit, wiring is easy and higher cleanliness is realized by adopting cableless moving magnet system for the moving parts.



5 ● Operation monitoring function

As with NT···XZ, the track can be verified from PC by using the driver monitoring function.

Identification Number and Specification

1 Model

NT···XZ : Nano Linear NT···XZ
NT···XZH: Nano Linear NT···XZH, high thrust type

2 Size

80: Z-axis width of 80mm (applicable to NT···XZ)
90: Z-axis width of 90mm (applicable to NT···XZH)

3 X-axis stroke length

25: 25mm (applicable to NT···XZH)
45: 45mm (applicable to NT···XZ)

4 Z-axis stroke length

10: 10mm

5 Resolution of linear encoder

1 : 0.1μm
1F: 0.1μm High speed specification
5 : 0.5μm

6 Cooling type

No symbol: Natural air cooling
CA : Air cooling (applicable to NT···XZH)

Specifications

Table 1 Specification / Performance of NT38V

Item \ Model and size		NT38V10		NT38V18	
Maximum thrust(1)	N	3			
Rated thrust(2)	N	0.6		0.8	
Maximum load mass	kg	0.5			
Effective stroke length	mm	10		18	
Resolution	μm	0.1	0.5	0.1	0.5
Maximum speed	mm/s	270	500	270	500
Positioning repeatability(3)	μm	±0.5			
Mass of moving table	kg	0.036 (with cover 0.040)		0.048 (with cover 0.052)	
Total mass(4)	kg	0.190 (with cover 0.198)		0.230 (with cover 0.239)	
Ambient temperature and humidity in operation		0~40℃ · 20~80%RH (keep dewdrop free)			

Notes (1) The duration of maximum thrust is up to 1 second.
(2) This is based on the case of mounting on a metal mating member material at an ambient temperature of 20℃.
(3) When the temperature of the product is constant.
(4) Mass of the cord is not included.

Table 2 Specification / Performance of NT55V

Item \ Model and size		NT55V25			NT55V65		
Maximum thrust(1)	N	25					
Rated thrust(2)	N	7					
Maximum load mass	kg	5					
Effective stroke length	mm	25			65		
Resolution	μm	0.1		0.5	0.1		0.5
Maximum speed	mm/s	270	1 000(5)	1 300	270	1 000(5)	1 300
Positioning repeatability(3)	μm	±0.5					
Mass of moving table	kg	0.17			0.17		
Total mass(4)	kg	0.42			0.5		
Ambient temperature and humidity in operation		0~40℃ · 20~80%RH (keep dewdrop free)					

Notes (1) The duration of maximum thrust is up to 1 second.
(2) This is based on the case of mounting on a metal mating member material at an ambient temperature of 20℃.
(3) When the temperature of the product is constant.
(4) Mass of the cord is not included.
(5) Applicable to high speed specification.

Table 3 Specification / Performance of NT80V

Item \ Model and size		NT80V25			NT80V65			NT80V120		
Maximum thrust(1)	N	36								
Rated thrust(2)	N	8								
Maximum load mass	kg	5								
Effective stroke length	mm	25			65			120		
Resolution	μm	0.1		0.5	0.1		0.5	0.1		0.5
Maximum speed	mm/s	270	1 000(5)	1 300	270	1 000(5)	1 300	270	1 000(5)	1 300

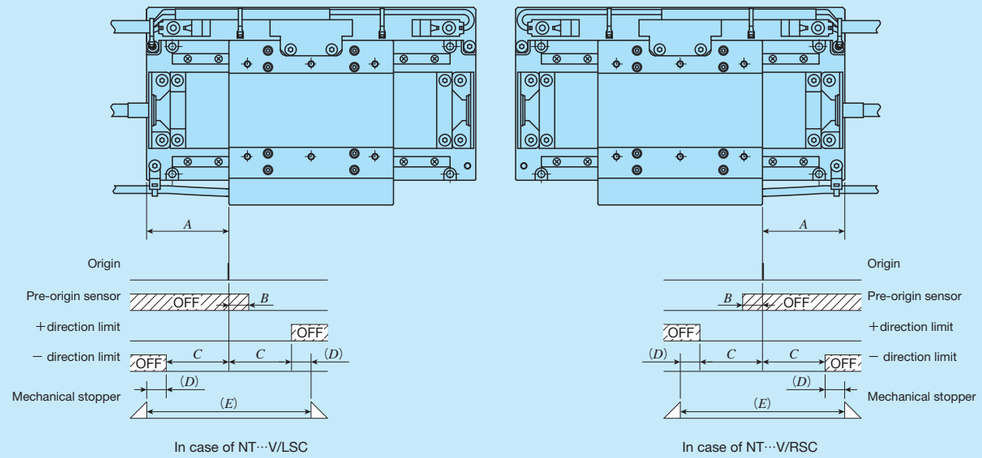
Sensor Specification

Table 6 Sensor timing chart for NT55V/SC and NT80V/SC



unit: mm

Model and size	*A*	*B*(1)	*C*(1)	*D*(1)	*E*(1)
NT55V 25/SC	20	4	12.5	3	31
NT55V 65/SC	40	4	32.5	3	71
NT80V 25/SC	20	4	12.5	3	31
NT80V 65/SC	40	4	32.5	3	71
NT80V120/SC	70	4	60	5.5	131

Note (1) Respective values are for reference and are not guaranteed values.
For detailed dimensions, please contact IKO.

Remark: For the specifications of respective sensors, please see the section of sensor specification in General Explanation.

● NT···V, NT···XZ and NT···XZH do not have a built-in sensor

Return to origin operation in a system configuration using driver ADVA and the system configuration for NT38V is conducted by external input. In the return to origin operation, the moving table turns around after contacting the mechanical stopper, and then stops at the origin position. Since, however, a limit sensor and a pre-origin sensor can be mounted on NT55V and NT80V with a supplemental signal (/SC), the return to origin operation using each sensor is also possible.
Forward / backward direction limit detection in a system configuration using the driver ADVA is performed by driver's software limit function. The stroke range can be set by parameters for driver. In addition, the software limit function is only enabled in position control mode and return to origin must be completed. In case of speed control mode and thrust force control mode, mount an external sensor.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Sensor Specification

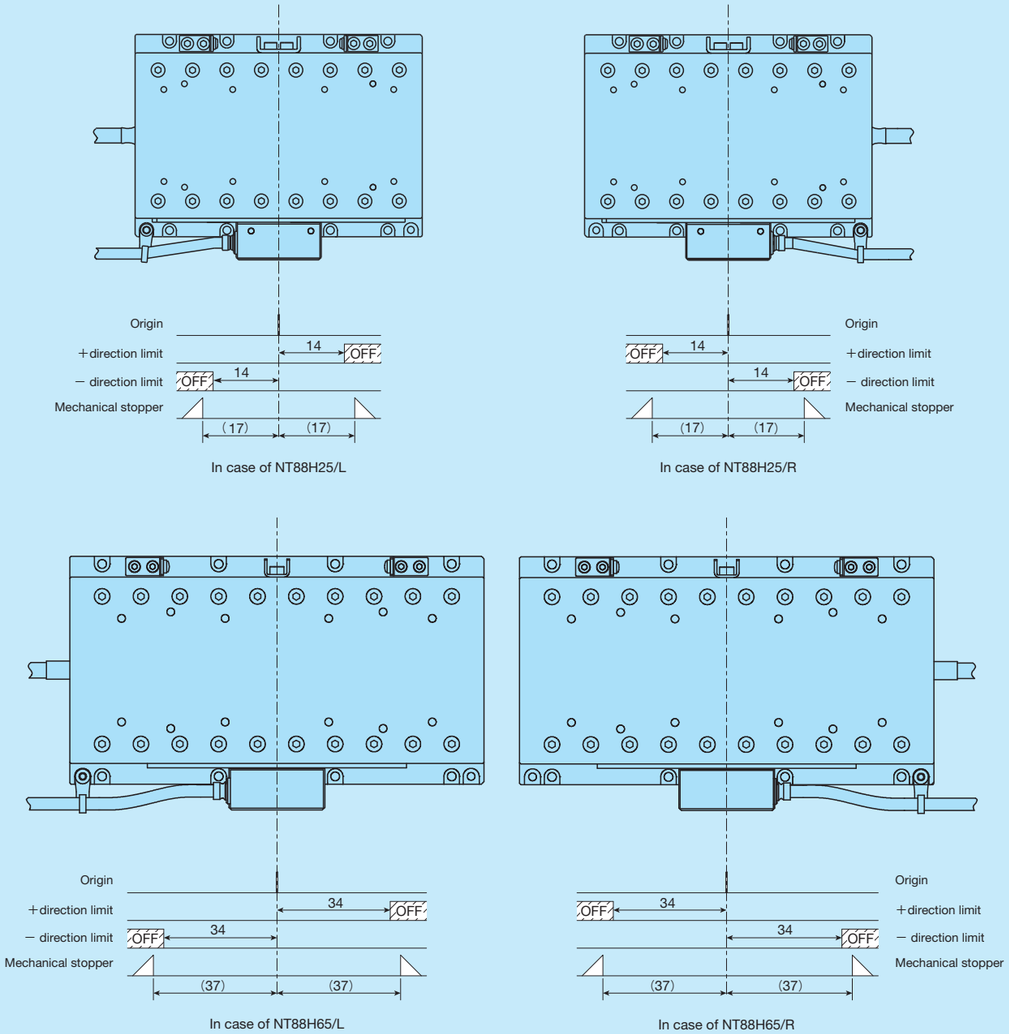


Fig. 24 Sensor timing chart for NT···H

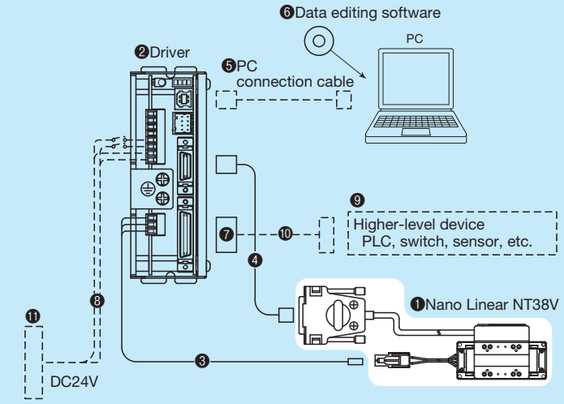
Remarks 1. For return to origin operation in a standard system configuration, use the return to origin function (limit inversion method) of the driver. It is necessary to input the limit signal output from the encoder interface to the driver.
2. Pre-origin sensor is not provided.
3. For the specifications of respective sensors, please see the section of sensor specification in General Explanation.

System Configuration

■ System configuration for NT38V

There are dedicated driver for Nano Linear NT38V, and the system configuration is shown in Table 7. For detailed driver specifications, please see the section of driver specifications on page Ⅱ-357. When you place an order, please specify desired identification numbers from the list of Table 7.

Table 7 System configuration for NT38V



No.	Name	Identification number
❶	Nano Linear NT···V	NT38V
❷	Driver	NCR-DCE0D3B-021D-S135
❸	Motor extension cord (3m(1))	TAE20T8-AM03

1mm=0.03937inch

■ System configuration for NT55V, NT80V, NT···XZ and NT···XZH

Two series of dedicated drivers, ADVA and MR-J4, are available for Nano Linear NT55V, NT80V, NT···XZ and NT···XZH, and the system configuration varies depending on the driver used. For ADVA, two types of specification, pulse train specification and high speed network EtherCAT specification, are available. For MR-J4, only high speed network SSCNET Ⅲ/H specification is available. Table 8 shows the correspondence between drivers and tables. Table 9 shows the example of identification number for ADVA, and Table 10 shows the tables and model number of applicable MR-J4. For detailed driver specification, please see the driver specification on page Ⅱ-359 to Ⅱ-362.
Please also note that the drivers compatible with MECHATROLINK will be prepared based on respective usages. If needed, please contact IKO.

Table 8 Nano Linear NT···V, NT···XZ, NT···XZH and model numbers of applicable drivers

Driver type	Applicable Nano Linear model
ADVA	NT55V、NT80V、NT···XZ、NT···XZH
MR-J4	NT55V、NT80V

Remark: MR-J4 is only applicable to sensor-included specification / SC.

● Setup software

To operate Nano Linear NT55V, NT80V, NT···XZ and NT···XZH, initial setting of driver parameters is required. Parameter setting for driver is performed using the setup software. It can also be used for gain adjustment and operational status check. In the driver, the setup software and PC connection cable are not provided. These can be shared in plural drivers but at least 1 set is required. Please prepare these on your own or place an order separately according to your requirement.

Straightness	–
Backlash	–

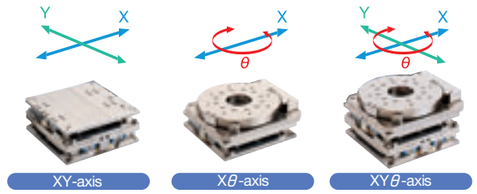
Points

● Compact XYθ-table

1 Using a Linear Way L miniature linear motion rolling guide in the linear motion guiding parts and Crossed Roller Bearing in the rotation guiding parts respectively and adopting direct drive method in the drive section, this is an alignment stage for achieving low profile and compact XYθ motion.

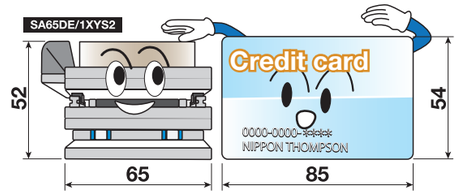
● Flexible combination of XYθ

2 X-table for linear movement and θ-table serving as rotary positioning section are listed on lineup as basic configuration. Combination of X-axis and θ-axis and alignment table for XY-axis can be easily configured.



● Thin and compact

3 Coreless linear motor, Linear Way L and Crossed Roller Bearing are adopted. As compared with ball screw-driven stage, extremely low profile is achieved.



● High resolution and high responsiveness

4 Performing full-closed loop control of direct drive-type stage with high resolution linear encoder built-in has achieved high resolution and high accuracy.

Drive conditions

SA120DE/1X3

Speed : 100mm/s
Acc./dec. time : 20ms

⑥ Specification number Page Ⅱ-263

Identification Number and Specification

① Model

SA···DE: Alignment Stage SA

② Size

65: □ 65, ϕ 65
120: □120, ϕ120
200: ϕ200

③ Resolution

1: 0.1μm
5: 0.5μm
Specify the resolution of the encoder for X-axis or XY-axis.
When selecting only S: θ-axis in the entry of section ④, set "No symbol" for the resolution.

④ Axial configuration

Select an axial configuration from the list of Table 1.

Table 1 Axial configuration and application

Axial configuration	SA65DE	SA120DE	SA200DE
X : Only X-axis	○	○	–
S : Only θ-axis	○	○	○
XY : XY -based two-axis configuration	○	○	–
XS : Xθ -based two-axis configuration	○	○	
XYS : X, Y, and θ-based three-axis configuration	○	○	

⑤ Surface treatment

No symbol: Electroless nickel plating
R : Black chrome surface treatment
Surface treatment is performed on the surfaces of table and bed.

⑥ Specification number

3: Specification number 3

The specification number is limited to 3.

Specifications

Table 2.1 Specification / Performance

Item \ Identification number		SA65DE/1X	SA65DE/5X	SA120DE/1X	SA120DE/5X
Maximum thrust (1)	N	25		70	
Rated thrust (2)	N	3.5		15	
Effective stroke length	mm	10		20	
Maximum load mass	kg	2.4		5.9	
Resolution	μm	0.1	0.5	0.1	0.5
Maximum speed (3)	mm/s	270	500	400	800
Positioning repeatability (4)	μm	±0.5			
Mass of moving table	kg	0.17		1.2	
Total mass (5)	kg	0.35		2.5	
Ambient temperature and humidity in operation		0~40℃ · 20~80%RH (keep dewdrop free)			

Notes (1) The duration of maximum thrust is up to 1 second.
(2) This is based on the case of mounting on a metal mating member material at an ambient temperature of 20℃.
(3) For the case of exceeding the displayed speed, please contact IKO.
(4) When the temperature of the product is constant.
(5) Mass of the cord is not included.

Table 2.2 Specification / Performance

Item \ Identification number		SA65DE/S	SA120DE/S	SA200DE/S
Maximum torque (1)	N·m	0.5	2.0	4.0
Rated torque (2)	N·m	0.06	0.4	1.2

System Configuration

Two series of dedicated drivers, ADVA and MR-J4, are available for the Alignment Stage SA, and the system configuration varies depending on the driver used. For ADVA, two types of specification, pulse train specification and high speed network EtherCAT specification, are available. For MR-J4, only high speed network SSCNET Ⅲ/H specification is available. Table 4 shows the example of identification number for ADVA, and Table 5 shows the tables and model number of applicable MR-J4. For detailed driver specification, please see the driver specification on page Ⅱ-359 to Ⅱ-362.

● Setup software

To operate Alignment Stage SA, initial setting of driver parameters is required. Parameter setting for driver is performed using the setup software. It can also be used for gain adjustment and operational status check.
In the driver, the setup software and PC connection cable are not provided. These can be shared in plural drivers but at least 1 set is required. Please prepare these on your own or place an order separately according to your requirement.

Compact, high thrust, and long stroke LT series!

Linear Motor Table LT is a compact and high-precision positioning table with an optical linear encoder built in and with AC linear servomotor incorporated between moving table and bed. Lightweight moving table and large thrust force enables the operation of high acceleration / deceleration and high response. And, the advanced servo technology achieves high static stability and speed stability.

Three types, consisting of Compact type LT···CE, Long stroke type LT···LD, and High thrust type LT···H, are listed on lineup, which allows customers to select the most suitable model depending on the usage.

Linear Motor Table LT specification list

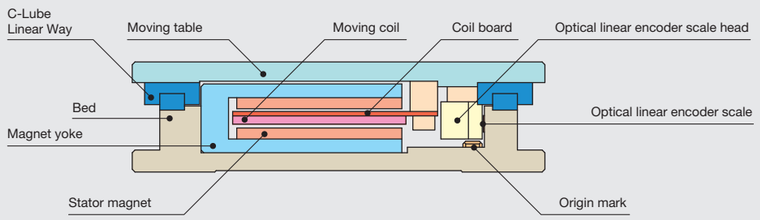
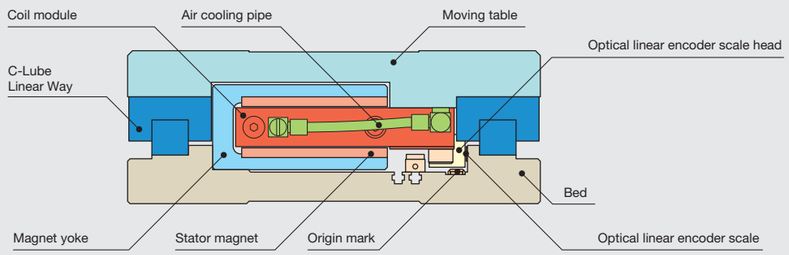
Sectional Structure of Linear Motor Table LT

Structures of LT···CE and LT···LD



Structure of LT···H

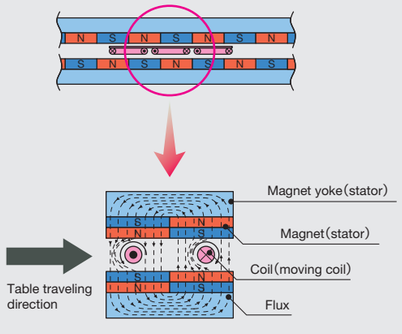


Operating principle of Linear Motor Table LT

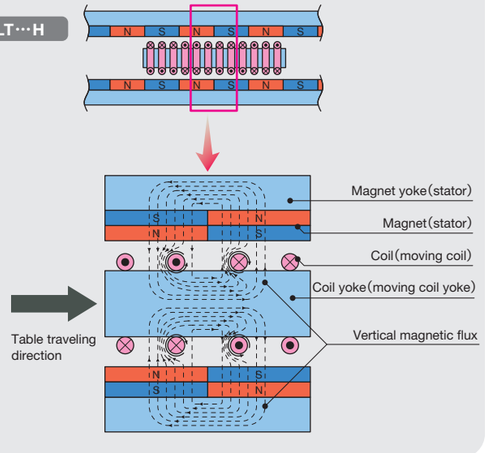
Linear Motor Table LT consists of moving field coil and stator having a magnet arranged facing the inside of C-type yoke. Magnetic flux vertically exerted by magnet and rotational flux generated around the coil by electric current causes the coil to be forced horizontally. (Fleming's left-hand rule)

By switching the coil current to certain direction corresponding to the flux direction, continuous thrust force in a certain direction can be obtained and linear motions of the rotator is maintained. In the High Thrust Series, as the coils are densely arranged in vertical magnetic flux generated by a pair of coil yokes arranged one above the other, it can produce extremely high thrust force although it is small.

LT···CE and LT···LD

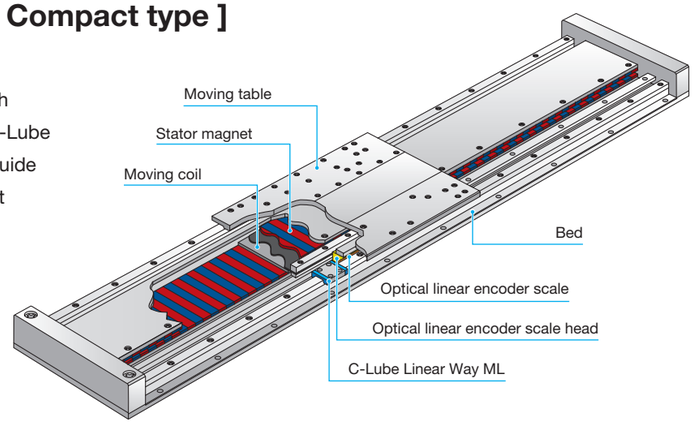


LT···H



LT···CE [Compact type]

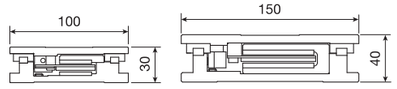
LT···CE is a compact linear motor table with high thrust force generating capability, which uses C-Lube Linear Way ML, miniature linear motion rolling guide in the table guiding parts and adopts lightweight aluminum alloy in the moving table.



Points

1 ● Compact

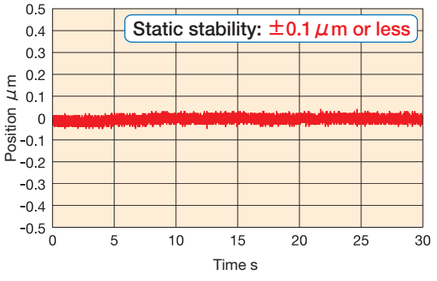
Low profile design with downsizing thoroughly pursued by adopting C-Lube Linear Way ML and small optical linear encoder. Minimum sectional height of 30mm (LT100CE) is achieved.



LT100CE **LT150CE**

2 ● Static stability

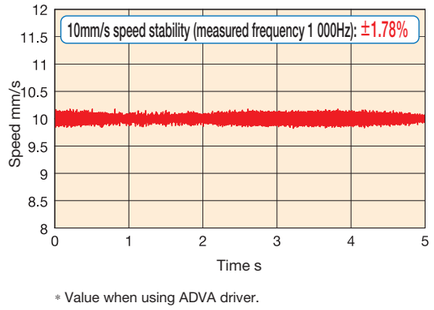
Advanced servo technology has achieved high static stability.



* Value when using ADVA driver.

3 ● High speed stability

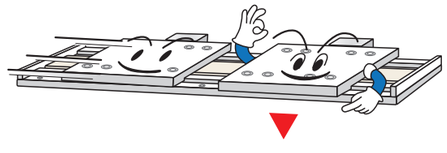
Direct drive and advanced servo technology has achieved high speed stability.



* Value when using ADVA driver.

4 ● High acceleration / deceleration and high response

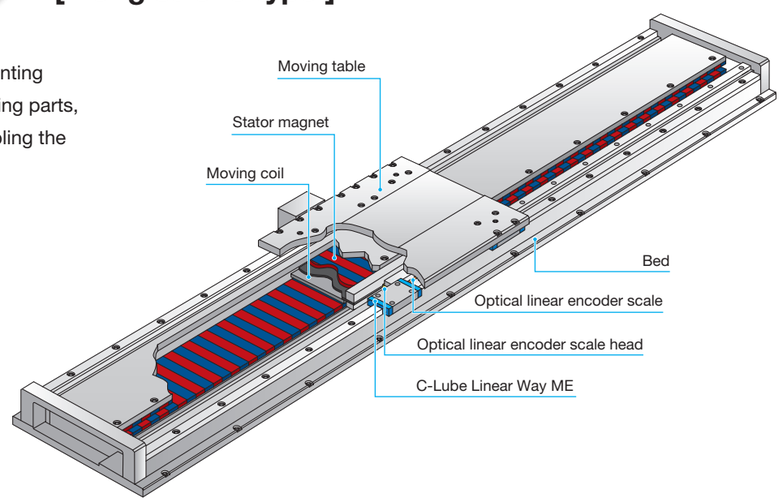
This unit is small but can produce a great thrust force. Aluminum alloy-made and lightweight moving table has achieved the positioning by high acceleration / deceleration and high response. It contributes to shortening of tact time.



1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

LT···LD [Long stroke type]

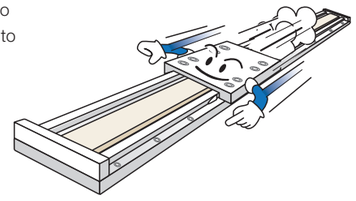
Using C-Lube Linear Way ME of the jointing specification track rail in the table guiding parts, the LT···LD is a linear motor table enabling the long stroke and high-speed operation.

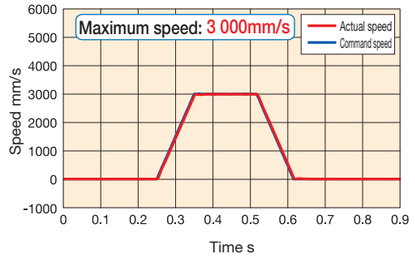


Points

1 ● High speed

Direct drive enables both high-precision positioning and high speed. Supports high speed operation required for long stroke motion. It is possible to perform high-speed motion of up to 3,000mm/s.

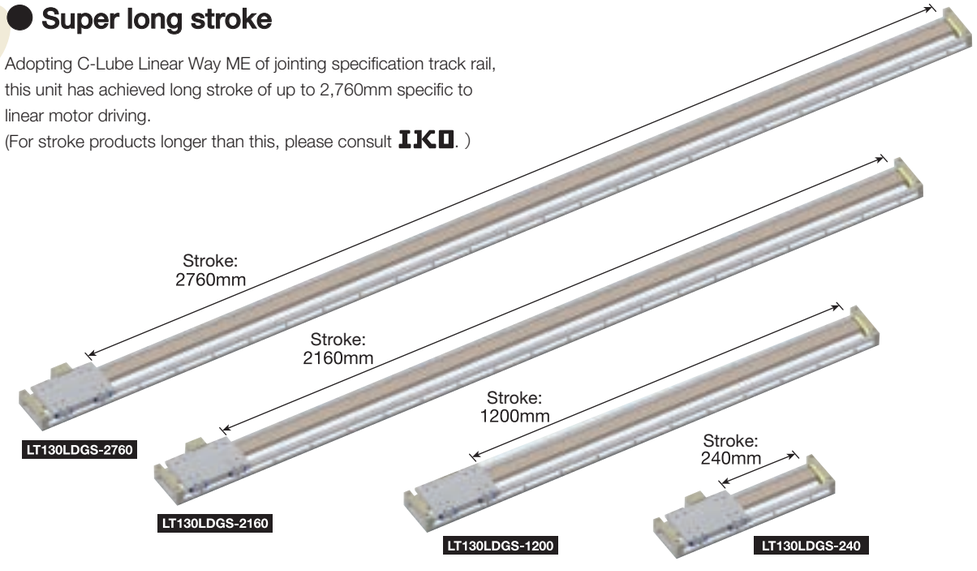




∗ Value when using ADVA driver.

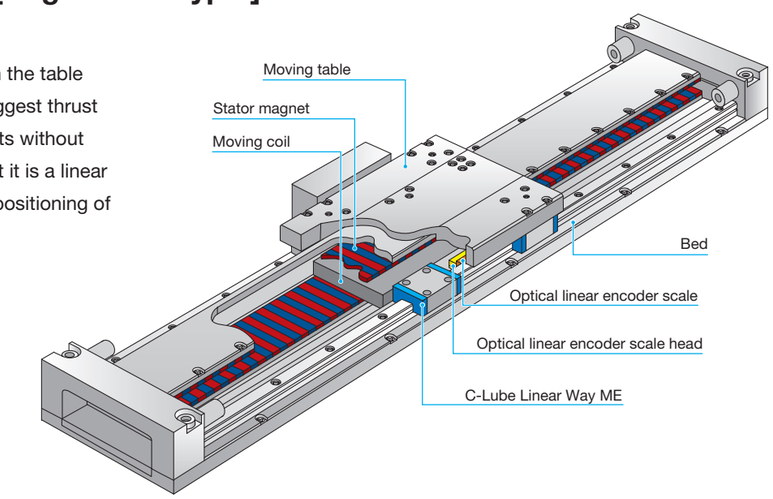
2 ● Super long stroke

Adopting C-Lube Linear Way ME of jointing specification track rail, this unit has achieved long stroke of up to 2,760mm specific to linear motor driving.
(For stroke products longer than this, please consult IKO.)



LT···H [High thrust type]

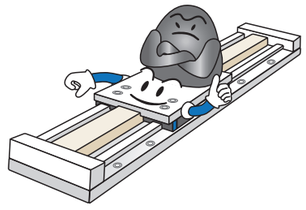
LT···H uses C-Lube Linear Way ME in the table guiding parts and can produce the biggest thrust force among linear motor table LT units without impairing the compact feature, so that it is a linear motor table best suited for precision positioning of a heavy load.

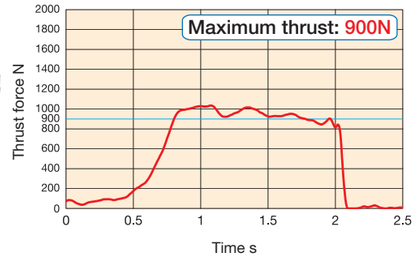


Points

1 ● High thrust

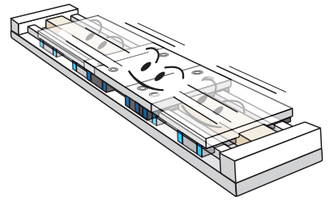
Although this table is compact in shape, it can produce maximum thrust force of 900N. This unit is best suited to the precision positioning of heavy load.

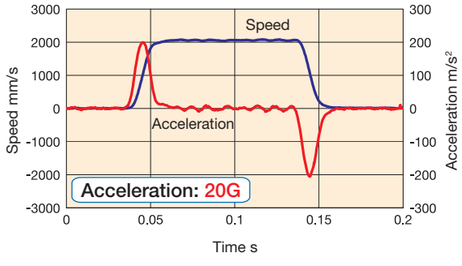




2 ● High acceleration / deceleration

Lightweight table and high thrust have achieved high acceleration / deceleration and high response.





3 ● Air cooling

Cooling mechanism for suppressing the heating of motor section is optionally set. It enables shortening of tact time and contributes to improving the production efficiency.

6 Resolution

1: 0.1 μm
5: 0.5 μm
10: 1.0 μm

7 Cooling type

No symbol: Natural air cooling
CA : Air cooling (applicable to LT···H)

8 Designation of cover

No symbol: Without cover (applicable to standard moving table)
D : With cover (applicable to moving table with flange)

9 Designation of sensor

No symbol: Without sensor
SC : Sensor (limit and pre-origin), with sensor rail (applicable to LT···CE)

LT···LD and LT···H have a sensor built-in. For the entry of section 9, set "No symbol".

10 Specification of moving table

No symbol: Single table
T2 : Twin table

11 Specification number

1 : Specification number 1

The specification number is limited to 1.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Specifications

Table 3 LT···CE performance

Item \ Model and size		LT100CEG			LT150CEG		
Maximum thrust(1)	N	150 (120)			450 (350)		
Rated thrust	N	15			60		
Maximum load mass	kg	15 (12)			45 (35)		
Resolution	μm	0.1	0.5	1.0	0.1	0.5	1.0
Maximum speed(2)	mm/s	700	2 000	2 000	700	2 000	2 000
Positioning repeatability(3)	μm	±0.5	±0.5	±1.0	±0.5	±0.5	±1.0

Notes (1) The duration of maximum thrust is up to 1 second.
(2) This speed may not be reached depending on the max. output frequency of the controller used.
(3) When the temperature of the product is constant.
Remark: The value in ( ) is when the ADVA driver is used.

Table 4 LT···LD performance

Item \ Model and size		LT130LDG			LT170LDG			LT170LDV		
Maximum thrust(1)	N	150 (120)			450 (350)			190 (145)		
Rated thrust	N	15			60			25		
Maximum load mass	kg	15 (12)			45 (35)			28 (20)		
Resolution	μm	0.1	0.5	1.0	0.1	0.5	1.0	0.1	0.5	1.0
Maximum speed(2)	mm/s	700	2 000	3 000	700	2 000	2 000	700	2 000	3 000
Positioning repeatability(3)	μm	±0.5	±0.5	±1.0	±0.5	±0.5	±1.0	±0.5	±0.5	±1.0

Notes (1) The duration of maximum thrust is up to 1 second.
(2) This speed may not be reached depending on the max. output frequency of the controller used.
(3) When the temperature of the product is constant.
Remark: The value in ( ) is when the ADVA driver is used.

Table 5 LT···H performance

Item \ Model and size		LT130H			LT170H		
Maximum thrust(1)	N	300			900		
Rated thrust(2)	Natural air cooling N	60			120		
	Air cooling (3) N	75			150		
Maximum load mass	kg	30			90		
Resolution	μm	0.1	0.5	1.0	0.1	0.5	1.0
Maximum speed (4) (5)	mm/s	700	1 500(2 000)	1 500(2 000)	700	1 500(2 000)	1 500(2 000)
Positioning repeatability(6)	μm	±0.5	±0.5	±1.0	±0.5	±0.5	±1.0

Notes (1) The duration of maximum thrust is up to 1 second.
(2) In the case where the unit is fixed on a steel-made cradle under ambient temperature of 0 to 25℃. For more information, please see Fig. 12 on page Ⅱ-288.
(3) This is under air flow rate of 30NL/min.
(4) For the speed exceeding 1,500mm/s, please contact IKO.
(5) This speed may not be reached depending on the max. output frequency of the controller used.
(6) When the temperature of the product is constant.

Note (1) Respective values are for reference and are not guaranteed values. For detailed dimensions, please contact IKO.
Remark: For the specifications of respective sensors, please see the section of sensor specification in General Explanation.

System Configuration

Two types of dedicated drivers, ADVA and NCD171G (programmable control unit specification, integrating programmable controller and servo driver), are available for the Linear Motor Table LT, and the system configuration varies depending on the driver used. For ADVA, two types of specification, pulse train specification and high speed network EtherCAT specification, are available. Table 7 shows the correspondence between drivers and tables. Table 8 shows an example of identification number for ADVA, and Tables 9 to 11 show the system configuration for each driver. For detailed driver specification, please see the driver specification on page Ⅱ-359 to Ⅱ-361 and Ⅱ-363.
Please also note that the driver (MR-J4-10B) compatible with SSCNET Ⅲ/H will be prepared based on respective usages. If needed, please contact IKO.

Table 7 Identification numbers of Linear Motor Tables LT...CE, LT...LD, LT...H and applicable drivers

Driver type	Applicable Linear Motor Table model
ADVA	LT···CE、LT···LD
NCD171G	LT···CE、LT···LD、LT···H

Table 8 Identification number for ADVA

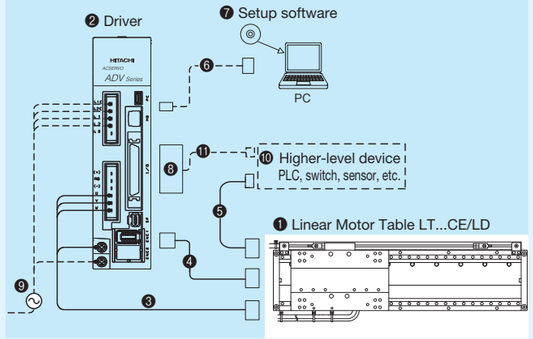
ADVA – 01NL EC / LT100CEG
(1) Model (2) (3) (4)

(2) Current and voltage	
01NL	Single-phase / Three-phase 200 V

(3) Command type	
No symbol	Pulse train command
EC	EtherCAT

(4) Applicable Linear Motor Table model	
LT100CEG	LT100CEG
LT150CEG	LT150CEG
LT130LDG	LT130LDG
LT170LDG	LT170LDG (high thrust specification)
LT170LDV	LT170LDV (high speed specification)

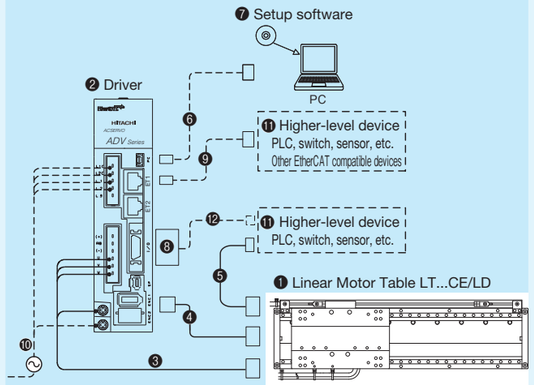
Table 9 System configuration for LT...CE/LD with driver ADVA



No.	Name	Identification Number
❸	Motor extension cord	TAE20V7-AM□□
❹	Encoder extension cord	TAE20V8-EC□□
❺	Sensor extension cord	TAE10V8-LC□□
❻	PC connection cable	USB mini B cable This must be prepared by customer.
❼	Setup software	ProDriveNext Please download from the official website of Hitachi Industrial Equipment Systems Co., Ltd.
❽	I/O connector	TAE20R5-CN(1)
❾	Power cord	This must be prepared by customer.
❿	Higher-level device	
⓫	I/O connector connection cable	

Note (1) I/O connector TAE20R5-CN is a combined product of 10150-3000PE (connector) and 10350-52F0-008 (cover) from Sumitomo 3M Limited.
Remark: The lengths of motor extension cord, encoder extension cord, and sensor extension cord are specified in the □□ located at the end of the identification number for length of 3 to 10m in units of 1m.
The cord length is specified in two digits even when the length is less than 10m. (For 3m: TAE20V7-AM03)

Table 10 System configuration for LT...CE/LD with driver ADVA···EC



No.	Name	Identification Number
❸	Motor extension cord	TAE20V7-AM□□
❹	Encoder extension cord	TAE20V8-EC□□
❺	Sensor extension cord	TAE10V8-LC□□
❻	PC connection cable	USB mini B cable This must be prepared by customer.

❽	I/O connector	TAE20V5-CN(1)
❾	Ethernet cable	This must be prepared by customer.
❿	Power cord	
⓫	Higher-level device	
⓬	I/O connector connection cable	

Note (1) I/O connector TAE20R5-CN is a combined product of 10120-3000PE (connector) and 10320-52F0-008 (cover) from Sumitomo 3M Limited.
Remark: The lengths of motor extension cord, encoder extension cord, and sensor extension cord are specified in the □□ located at the end of the identification number for length of 3 to 10m in units of 1m.
The cord length is specified in two digits even when the length is less than 10m. (For 3m: TAE20V7-AM03)

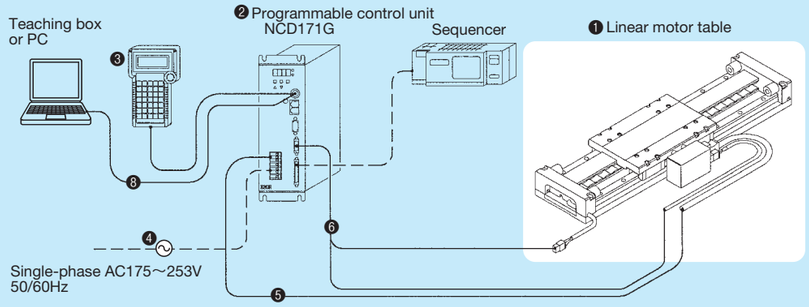
1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

● Setup Software

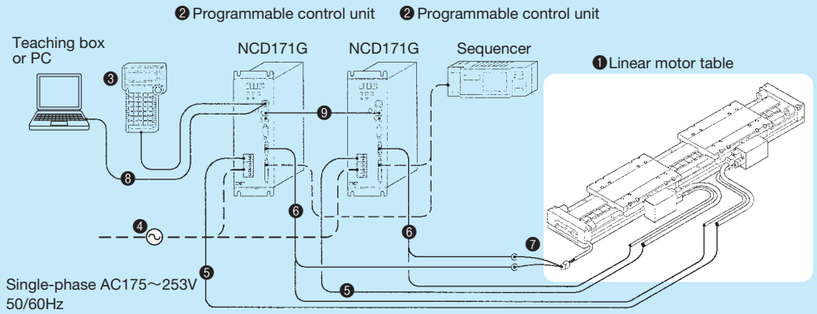
When operating Linear Motor Table LT through ADVA, initial setting of driver parameters is required. Parameter setting for driver is performed using the setup software. It can also be used for gain adjustment and operational status check.
In the driver, the setup software and PC connection cable are not provided. These can be shared in plural drivers but at least 1 set is required. Please prepare these on your own or place an order separately according to your requirement.

Table 11 System configuration using programmable control unit NCD171G

● Example of system configuration for single table



● Example of system configuration for twin table



No.	Name	Identification number			
		LT···CE	LT···CE/SC	LT···LD	LT···H
❶	Linear motor table	Please see pages of Ⅱ-293 to Ⅱ-304			
❷	Programmable control unit	NCD171G-L2620			NCD171G-L6820
❸	Teaching box	TAE1050-TB			
❹	Power cord	This must be prepared by customer.			
❺	Motor extension cord	TAE20C8-MC□□			
❻	Encoder extension cord (1)	TAE20S5-EC□□	—		—
	Limit / Encoder extension cord	—	TAE20V0-EC□□		TAE20V1-EC□□
❼	Limit branch cord (0.1m)	TAE20V2-BC			
❽	Communication cable (2.0m)	TAE1098-RS			
❾	Inter axial cable (1.0m)	TAE1099-LC			

Note (1) This is applied to LT···CE without sensor. Limit sensor connection cord shown in the configuration example is not included.
Remark: The lengths of motor extension cord, encoder extension cord, and limit / encoder extension cord are specified in the fields of □□ located at the end of the identification number with a length from 3 to 10m in units of 1m.
(The limit cord portion is shortened by 1.5m.)
The cord length is specified in two digits even when the length is less than 10m. (For 3m: TAE20C8-MC03)

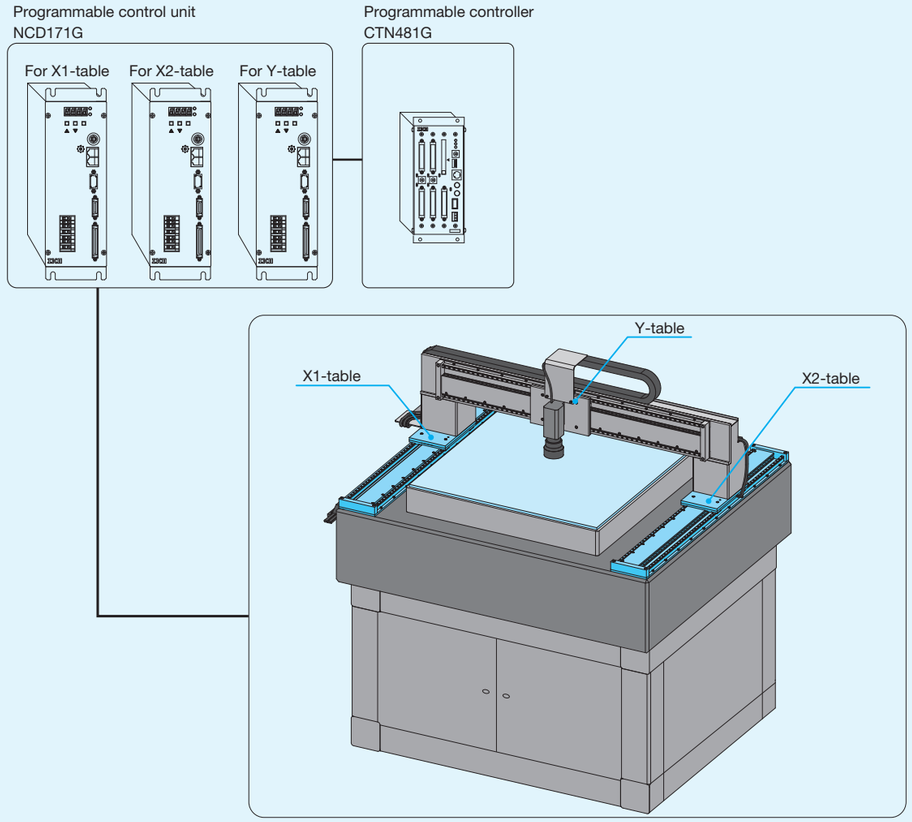
● Two-axis parallel operation

Implementing rigid combination of two sets of Linear Motor Table LT arranged in parallel enables parallel operation by two-axis driving.
As compared with conventional single-axis driving and single-axis driven method, the two-axis parallel operation enables stabilized positioning mechanism with flame torsion and the delay of right and left drive shafts minimized. This is most suitable for inspection devices that need carrying of large size work and wide moving area such as a flat panel display production device.
Two-axis parallel operation is prepared based on respective usages. For details of product specifications, please contact IKO.

Comparison of characteristics by driving method

Two-axis parallel operation	single-axis driving and single-axis driven method
· This is driven by two-axis and can generate large thrust force. · Driving of right and left tables enables positioning mechanism with table delay and flame torsion minimized. · Table delay and flame torsion are minimized, which ensures high positioning accuracy. · As compared with two-axis synchronization control system, this can reduce the cost.	· This is driven by single-axis and cannot generate large thrust force. · Only single-axis is driving, which is likely to cause the delay of driven-side table and flame torsion. · Delay of driven-side table and flame torsion tend to occur, which cannot ensure the positioning accuracy.

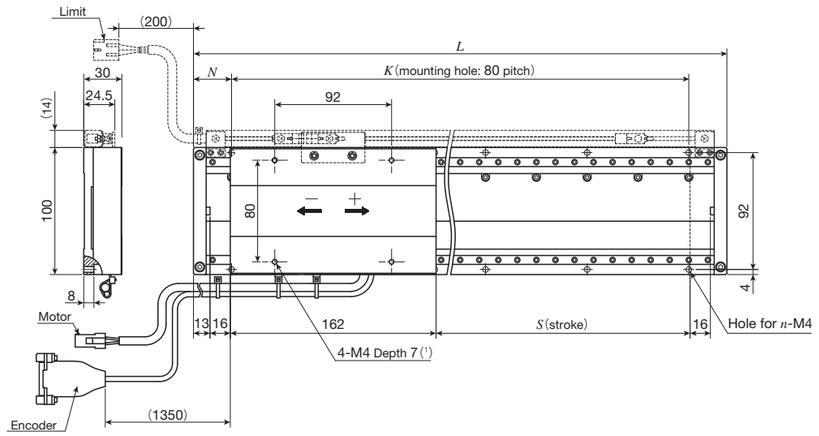
System configuration example using programmable control unit NCD171G



This configuration example is a system configuration of parallel operation of X1 and X2 tables with IKO programmable controller CTN481G set as an upper controller.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

LT100CEGS Single table

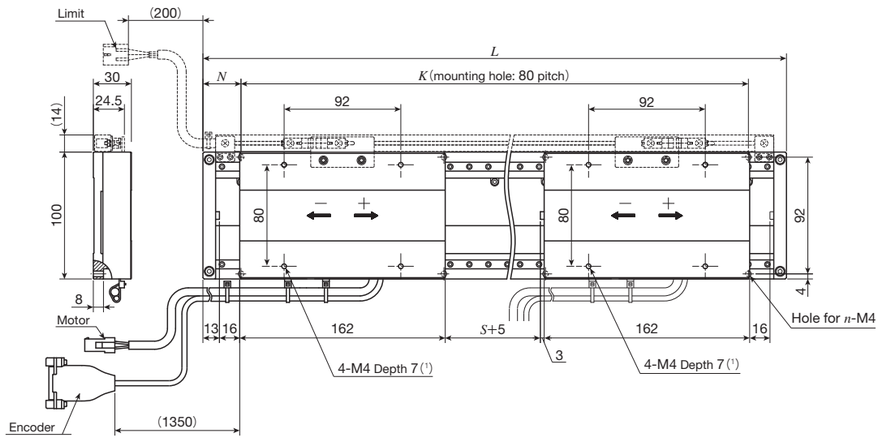


unit: mm

Identification number	Stroke length S(2)	Overall length L	Mounting holes of bed N	K	n	Total mass of table kg	Mass of moving table kg
LT100CEGS- 200	200	420	50	320	10	4.9	0.58
LT100CEGS- 400	400	620	30	560	16	6.9	
LT100CEGS- 600	600	820	50	720	20	9.0	
LT100CEGS- 800	800	1 020	30	960	26	11.1	
LT100CEGS-1000	1 000	1 220	50	1 120	30	13.1	

Notes (1) Too deep insertion depth of the mounting bolt may affect the running performance of the moving table, so never insert a bolt longer than the depth of the through hole.
(2) For other stroke lengths, please contact IKO.
Remark: Dashed line portions in the dimensional figures indicate the sensor-included specification / SC.

LT100CEGS/T2 Twin table

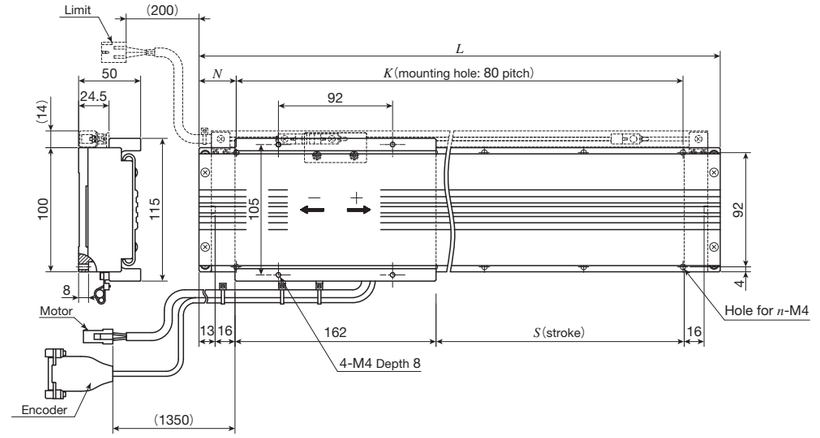


unit: mm

Identification number	Stroke length S(2)	Overall length L	Mounting holes of bed N	K	n	Total mass of table kg	Mass of moving table kg
LT100CEGS-230/T2	230	620	30	560	16	7.5	0.58
LT100CEGS-430/T2	430	820	50	720	20	9.6	
LT100CEGS-630/T2	630	1 020	30	960	26	11.7	
LT100CEGS-830/T2	830	1 220	50	1 120	30	13.7	

Notes (1) Too deep insertion depth of the mounting bolt may affect the running performance of the moving table, so never insert a bolt longer than the depth of the through hole.
(2) For other stroke lengths, please contact IKO.
Remark: Dashed line portions in the dimensional figures indicate the sensor-included specification / SC.

LT100CEGF/D Single table with cover

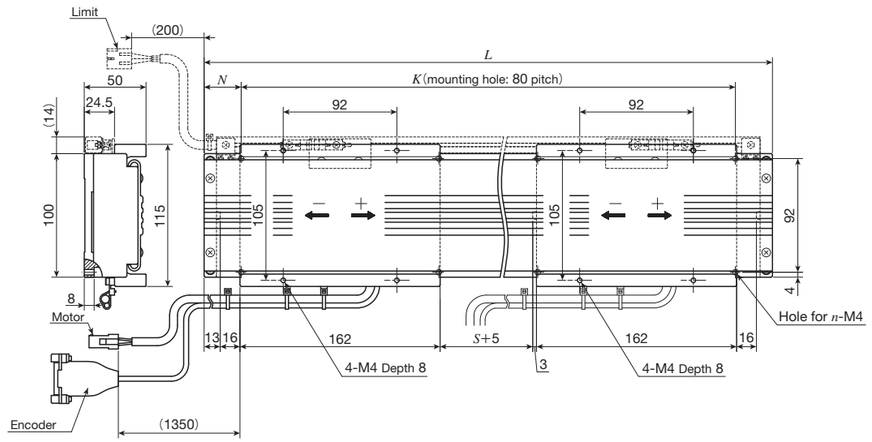


unit: mm

Identification number	Stroke length S(1)	Overall length L	Mounting holes of bed N	K	n	Total mass of table kg	Mass of moving table kg
LT100CEGF- 200/D	200	420	50	320	10	5.6	0.93
LT100CEGF- 400/D	400	620	30	560	16	7.8	
LT100CEGF- 600/D	600	820	50	720	20	10.0	
LT100CEGF- 800/D	800	1 020	30	960	26	12.2	
LT100CEGF-1000/D	1 000	1 220	50	1 120	30	14.4	

Note (1) For other stroke lengths, please contact IKO.
Remark: Dashed line portions in the dimensional figures indicate the sensor-included specification / SC.

LT100CEGF/DT2 Twin table with cover



unit: mm

Identification number	Stroke length S(1)	Overall length L	Mounting holes of bed N	K	n	Total mass of table kg	Mass of moving table kg
LT100CEGF-230/DT2	230	620	30	560	16	8.7	0.93
LT100CEGF-430/DT2	430	820	50	720	20	10.9	
LT100CEGF-630/DT2	630	1 020	30	960	26	13.2	
LT100CEGF-830/DT2	830	1 220	50	1 120	30	15.4	

Note (1) For other stroke lengths, please contact IKO.
Remark: Dashed line portions in the dimensional figures indicate the sensor-included specification / SC.

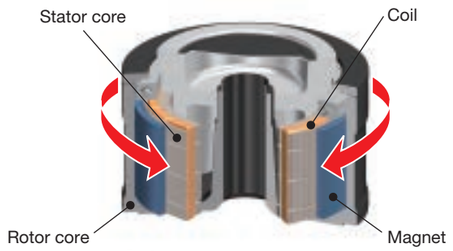
Attitude accuracy	–
Straightness	–
Backlash	–

Points

● Rotary positioning table without backlash and lost motion

1 Consisting of DD motor, high resolution optical encoder, and Crossed Roller Bearing, this is a high-speed and high precision rotary positioning table without backlash and lost motion.



● Operating principle of RT

● High speed and high precise positioning is enabled.

2 Adopting the DD servo actuator enables both high speed revolution of maximum number of revolution of 2.5s^{-1} and high precision of positioning repeatability of ±3 sec.

● High resolution optical encoder enables fine rotary positioning.

3 The encoder has super resolution capability of 2,621,440 interpolations. The minimum rotation angle of approx. 0.5 sec can support the use for fine rotary positioning.

● Compact and smooth rotation

4 Adoption of Crossed Roller Bearing capable of exerting high rigidity in all direction has achieved low profile, high rigidity, and high precision. Vibration of table's upper surface by rotation is small, thus allowing smooth operation.

Points

● Rotary positioning table for converting linear motion to rotary motion

1 This is a positioning table that allows precise angle correction by converting the linear motion to the rotational motion through the rotator mechanism combining the Linear Way and ball screws.High rigidity steel-made table and bed are used and a Crossed Roller Bearing is incorporated in the bearing supporting the table.

● Low profile design with high rigidity

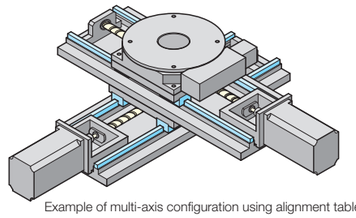
2 Adoption of Crossed Roller Bearing capable of exerting high rigidity in all direction has achieved low profile, high rigidity, and high precision.

● Positioning repeatability of ±1 sec

3 A rotator for converting linear motion to rotary motion is accurately guided by the combination of Linear Way L and precision ball screw, thus achieving the high positioning repeatability of ±1 sec.

● Available as multi-axis configured alignment table

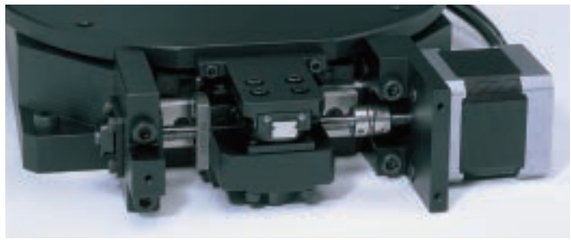
4 Placing this unit on the slide table of Precision Positioning Table LH enables the configuration of low height XY-θ multi-axis positioning mechanism.

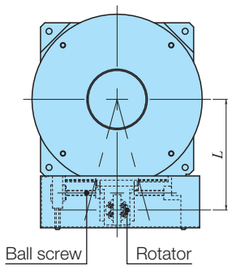


Example of multi-axis configuration using alignment table AT

Driving mechanism of Alignment Table AT

Alignment Table AT is driven by stroking a rotator linked to table's outer periphery by driving of ball screw in a linear direction. In order to adjust the distance L and angle from the center of table varied by rotator movement, linear and rotary motion mechanism that follows according to the table angle is incorporated in the rotator. Therefore, in Alignment Table, even when moving the rotator at a same pitch, the table's rotation angle tends to vary depending on the position, so that even when moving it at a constant speed, the rotation speed does not stay constant.





Distance from the center of table L unit: mm

③ Designation of motor attachment

As for a motor attachment, select it from the list of Table 1.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 2 is temporarily fixed in the main body before shipment, so that final position adjustment should be performed by customer.

Example of Combination

■ Configuration of XY-θ multi-axis positioning mechanism

Combining the Alignment Table AT with IKO precision positioning table of single-axis specification or multi-axis specification enables you to easily configure the XY-θ multi-axis positioning mechanism. Low assembling height, compactness, and high-precision positioning capability enable the table to be used as alignment table for precision measuring equipment, inspection equipment, and assembling device.

Table 6 Configuration example of multi-axis positioning mechanism unit: mm

Appearance of multi-axis positioning mechanism	Models of IKO precision positioning tables combined with Alignment Table AT			Stroke length

Major product specifications

Driving method	Precision ball screw
Linear motion rolling guide and bearing	Linear Way (ball type) Crossed Roller Bearing
Built-in lubrication part	No built-in
Material of table and bed	High carbon steel
Sensor	Provided as standard

Accuracy

unit: mm

Positioning repeatability	±0.002
Positioning accuracy	0.020
Lost motion	–
Parallelism in table motion A	–
Parallelism in table motion B	0.008
Attitude accuracy	–
Straightness	–
Backlash	0.003

Points

● Positioning module enabling various motions

1 This is a positioning module developed for alignment stage by combining the high rigidity Crossed Roller Bearing and Linear Way based on the Precision Positioning Table TU.

● Height adjustment is not required.

2 Tolerance of height dimension is managed at high precision of ±10μm. Alignment stage can be configured without adjusting the heights of respective Alignment Module AM.

● Flexibility of freely designing the stage according to the usage

3 This unit helps you freely design the alignment stage according to the usage by combining various stages and bases into the alignment module AM.

● Large stage of □2,000 class is also supported!

86-120: Width 86mm, stroke length 120mm, height 148mm

3 Designation of motor attachment

AT800: Without motor attachment
To specify the motor attachment, select it from the list of Table 1.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- If motor attachment is specified, a coupling shown in Table 2 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.
- For a product without motor attachment (AT800), no coupling is attached.

Points

● Compact precision elevating table

1 This is an elevating table for performing compact yet high precision vertical positioning with unique wedge mechanism adopted.

● Two types and two sizes selectable depending on the usage

2 There are two types consisting of high precision and high rigidity type with roller-type linear motion rolling guide incorporated and standard type superior in cost performance, and two sizes of □120mm and □200mm in dimensions of table are prepared for respective types. Two kinds of wedge reduction ratio are prepared, thus enabling vertical positioning of up to 24mm in stroke.

● Installation of linear encoder enables the positioning of a rank higher level.

3 Specifying an optional linear encoder attached unit and performing the fully-closed loop control enables the positioning of even higher precision.

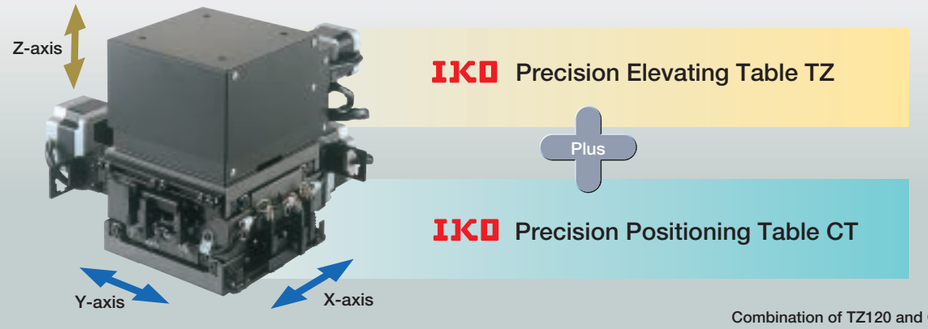
● Sensor provided as standard

4 Limit sensor and origin / pre-origin sensors are provided as standard. The sensor is compactly built in the main unit, thus facilitating the incorporation into a machine or device.

● Available as multi-axis configured Z-axis

5 Placing the unit on a slide table of precision positioning table makes the unit available as Z-axis positioning mechanism of the multi-axis table.

Example of combination with XYZ positioning table using the Precision Elevating Table TZ



Combination of TZ120 and CT125 / 125

Variation

Shape	Model and size	Table width (mm)	Linear motion rolling guide type	Wedge reduction ratio

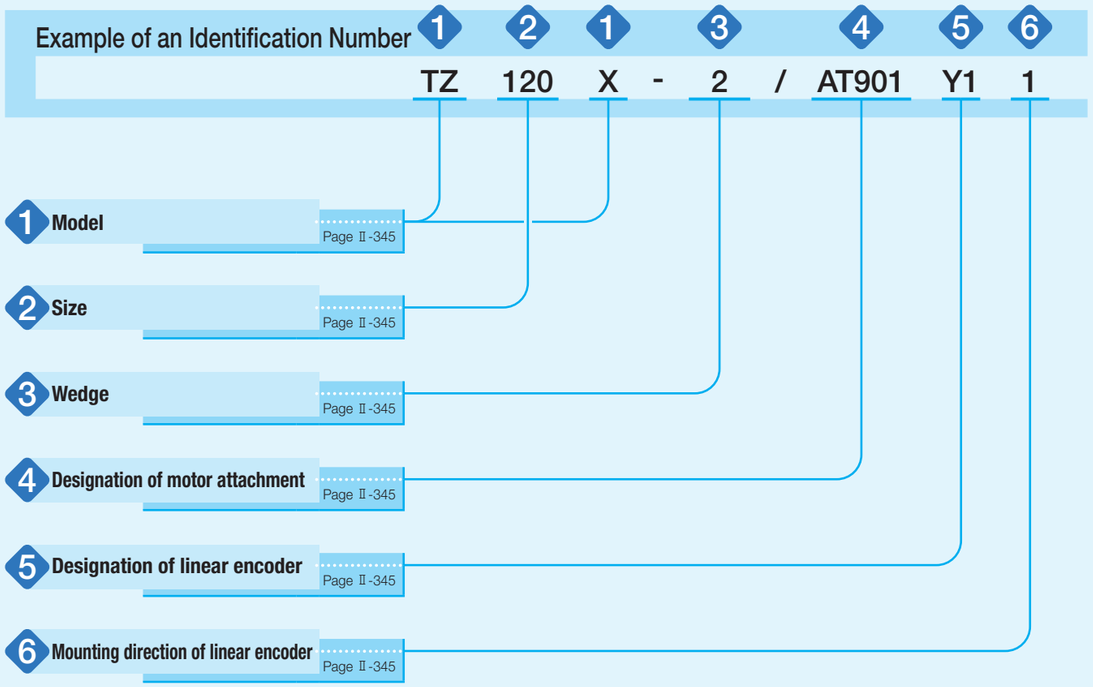
Identification Number



Identification Number and Specification

1 Model

TZ : Precision Elevating Table（applicable to size 120）
TZ···H: Precision Elevating Table（applicable to size 200）
TZ···X: Precision Elevating Table, high precision and high rigidity type（applicable to size 120, 200）

2 Size

120: Table size □120mm
200: Table size □200mm

3 Wedge

2: Wedge reduction ratio 1 : 2
4: Wedge reduction ratio 1 : 4

This ratio indicates the reduction ratio of vertical travel distance to the ball screw feed rate.

4 Designation of motor attachment

As for a motor attachment, select it from the list of Table 1.

- Motor should be prepared by customer.
- Please specify motor attachment applicable to motor for use.
- A coupling shown in Table 2 is mounted on the main body before shipment. However, the final position adjustment should be made by customer since it is only temporarily fixed.
- When specifying an AC servomotor attachment, an origin sensor is not provided.

5 Designation of linear encoder

No symbol: Without linear encoder
When specifying the linear encoder, see Table 3.

- "With linear encoder" is only applicable to AC servomotors of TZ···H and TZ···X. For applicable models and motor attachments, see Table 1.

6 Mounting direction of linear encoder

No symbol: On the right as viewed from the side opposite the motor
1 : On the left as viewed from the side opposite the motor

- The mounting direction of the linear encoder and pull-out direction of the sensor cord are the same.

Driver Specification for Linear Motor Drive Tables

NCR

■ Specification of driver NCR for NT38V

- Low-voltage (DC24V) specification and compact design of 115 x 100 x 33.8 mm. It contributes to miniaturization of devices and compactness.
- Settling time is reduced by setting two types of parameters, inertia and viscous friction, and performing feed forward torque control.
- The PC editing software has 4ch real-time oscillometer function, remote operation function and resonance frequency measurement function, etc. as well as parameter edit functions, allowing for easy machine diagnosis and startup / adjustment of the linear motor.

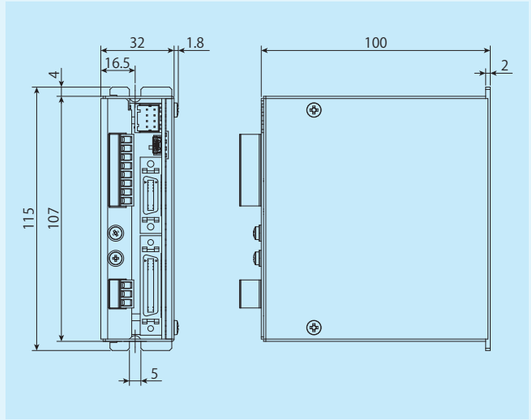

Table 1 Specifications for NCR

Item \ Identification Number			NCR-DCE0D3B-021D-S135
Electric specification	Input power	Type	Main power supply and control circuit power supply separating type
		Voltage specification	Continuous: DC24V ±5% (min. 22.8V to max 25.2V)
			Instantaneous: DC21.6V to DC28V (outside torque compensation range)
		Current specification	DC8.0 A (at rated output)
	Continuous output current		6.5 Arms
	Maximum output current		13.0 Arms
	Carrier frequency		10 kHz
	Input/Output signal		8 input points and 4 output points (DC12～24 V; photo coupler insulated)
	Communication		USB 2.0 (full speed): 1ch, RS-422A serial communication: 1ch
Functional specification	Main function		Speed control / pulse train operation, torque limit, self-diagnosis and forward / backward switching
	Operation mode	Pulse train operation	External pulse train command
			Switching of directional pulse / directional + shift pulse / Pulse with 90-degree phase difference
			Line driver: 4 MHz (16 MHz at 4-time multiplication)
			Phase sequence switching, electronic gear (pulse train command ratio), and command averaging function
			Internal pulse train command
			Inching, 7 positioning points, return to origin, 2 acceleration / deceleration points, S acceleration / deceleration (command averaging function used)
		Speed control operation	Analog command voltage gain switching, 7 internal speed command points
			Acceleration/deceleration time: 0～9.999 sec
	Torque limitation		2 parameter setting points (forward / backward separately)
	Servo performance improvement function		Speed gain switching: 3 points (normal, low speed and GSEL switching), torque command filter Feed forward (speed, inertia and viscous friction) and 5 notch filter points
	Control input signal (8 points)		Startup, servo on, torque limit, speed gain selection, reset, mode selection, command selection, command pulse input prohibition, command direction inversion, emergency stop, internal pulse startup, origin LS, origin marker forward direction overtravel, reverse direction overtravel, current position data output request forward inching, backward inching, alarm code output request and command data reflection prohibition
	Control output signal (4 points)		Ready, alarm, deviation range A and B, brake release, speed zero, marker output, in emergency stop, return to origin complete
	Monitoring function		Confirmation of status by 4-point status indicator LEDs PWR (green), RDY (green), RUN (green), ALM (red) The following monitor can be used in the optional dedicated editing software Various status indications, alarm indication, status indication by oscillometer function, etc.
	Protective function		Encoder failure, magnetic pole detection failure, overspeed, overload, under voltage, overvoltage, overcurrent failure, deviation error, DSP error and overheat protection
Environment	Ambient temperature		0 to 55˚C Storage: -20 to 60˚C
	Ambient humidity		90%RH or lower (keep condensation free), Storage: 85%RH or lower (keep condensation free)
	Vibration resistance		0.5 G (10～50 Hz) However, keep resonance free
	Shock resistance		5 G
Mass			0.41kg

■ Specification of NCR, a driver for NT...H

- The driver and positioning unit are integrated, and the system is miniaturized with its wiring streamlined.
- Higher reliability and usability such as driftless, elimination of adjustment fluctuation, improvement of man-machine interface have been pursued with digital control.
- Easy positioning operation and pulse train operation are supported by mode selection, for applications to wide range of usages.
- Torque control and speed control are available.
- Control suitable for machine rigidity is made possible by full-scale software servo functions such as linear / S-curve acceleration and deceleration, feed forward, torque command filter, gain switching at shutdown and low speed, disturbance compensation control, etc.
- Peripheral devices such as touch panel, higher-level controller, etc. can be connected via serial communication.
- Dedicated editing software can be connected via USB 2.0 (full speed).

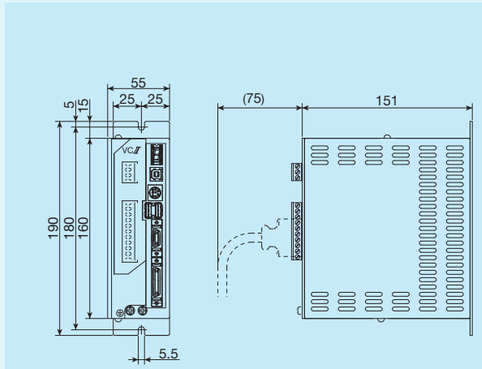

Table 2 Specifications for NCR

Item \ Identification Number			NCR-DDA0A1A-051D-T08
Basic specification	Maximum rated current		1.1 Arms
	Max. momentary current		3.3 Arms
	Power plant capacity		0.15kVA
	Input power (main circuit and control circuit)		Single-phase AC100～115V (allowable power fluctuation AC90～121V) 50/60Hz ±5%
	Control method		Three-phase sine wave PWM method
	Control mode		Position (position control data / pulse train)
Input/ Output function	Command input	Pulse train command	Line driver system is supported The maximum input frequency is indicated below (1) Pulse with 90-degree phase difference: 4Mpps (16Mpps after 4-time multiplication) (2) Directional pulse: 4Mpps (3) Directional + shift pulse: 4 Mpps
		Speed control operation	Analog speed command and internal speed command (3 points)
		Torque control operation	Analog torque command and internal torque command (3 points)
		Easy positioning operation	3 positioning modes: Manual mode / Return to origin mode / Easy positioning mode
	Contact input signal		[8 basic input signal points (initial value)] Servo on, reset, command pulse input prohibition, mode selection 1, mode selection 2, startup, speed selection, torque selection <Following signals are used by assigning remote control or input signals> Emergency stop, proportional control, address specification, speed override, deviation clear, torque limit, forward direction overtravel, reverse direction overtravel, etc.
	Contact output signal		[4 basic output signal points (initial value)] Servo ready, alarm, warning, positioning complete <Following signals are used by assigning remote control or output signals> Torque limit, speed zero, in speed operation mode, in torque operation mode, in easy positioning mode, in pulse train operation mode, encoder marker, etc.
	Encoder feedback pulse output		Pulse train output with 90-degree phase difference (frequency dividing output allowed. The maximum output frequency of 2 signals of A / B phase is 20Mpps after 4-time multiplication)
	Encoder feedback pulse input		Pulse train input with 90-degree phase difference (The maximum input frequency of 2 signals of A / B phase is 20Mpps after 4-time multiplication)
	Monitor output		(1) Analog monitor: 2 points (2 points selected by parameters from various motion status can be monitored.) (2) Various types of monitoring is possible with USB-ready dedicated editing software.
Internal function	Protective function		IPM failure, overvoltage, undervoltage, overspeed, overload, regeneration resistance overload, deviation overflow, communication failure, data error, CPU failure, encoder failure, automatic magnetic pole detection failure, absolute encoder failure, etc.
	Communication function		Various data can be transmitted / received via serial communication (RS-422A). Dedicated editing software can be connected via USB 2.0 (full speed)
Operating environment	Ambient temperature in operation / Storage temperature		0 to 55˚C / -20 to 66˚C
	Operating humidity		85%RH or lower (keep condensation free)
	Vibration resistance		0.5G 10～55Hz
	Service space		Altitude of 1000 m or below, indoor (no corrosive gas and dust)
Mass			1.0kg

ADVA

■ Specifications for ADVA

■ Applicable model numbers
NT series: NT55V, NT80V, NT...XZ, NT...XZH
SA series: all model numbers
LT series: LT100CEG, LT150CEG, LT130LDG, LT170LDG, LT170LDV

- In addition to the conventional pulse train command input, high speed motion network EtherCAT is also supported.
- 10 input terminals, 6 output terminals, and analog input (0 to ±10 V) can be controlled by intelligent terminals.
- The high controllability shortens the settling time, realizing further improvement of productivity.
- Machine diagnosis, startup and adjustment of linear motor can be easily performed thanks to parameter settings, monitor display, operation trace and automatic tuning function of the setup software.

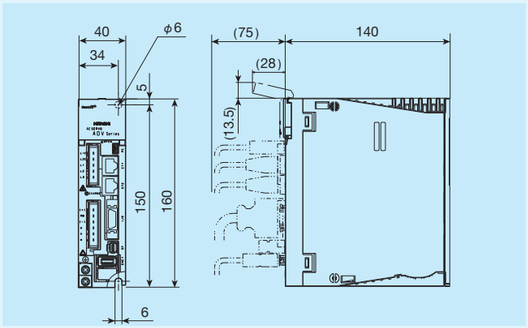

Table 3 Specifications for ADVA (pulse train command specification)

Item \ Identification Number		ADVA-R5ML	ADVA-01NL
Basic specification	Maximum rated current	1.2 Arms	
	Max. momentary current	3.6 Arms	
	Power plant capacity	0.3kVA	
	Input power (main circuit)	Single-phase 100 to 115V +10/-15% 50/60Hz ±5%	Single-phase / Three-phase 200 to 230V +10/-15% 50/60Hz ±5%
	Input power (control circuit)		Single-phase 200 to 230V +10/ -15% 50/60Hz ±5%
	Protective structure (1)	Open type IP00	
	Control method	Line-line sinusoidal pulse width modulation (PWM) method	
	Control mode	Position control / Speed control / Thrust force control	
	Supported linear scale	A, B and Z signals (line driver output: AM26C31 or AM26LS31 equivalent) Recommended encoder: LIE5 series (manufactured by JENA)	
	Linear scale maximum frequency	20 Mpps (after 4-time multiplication) [5 Mpps (original signal)]	
Input/ Output relation function	Speed command / Limit input	Analog input: 0 to ±10 V / Maximum speed (gain configurable)	
	Thrust force command / Limit input	Analog input: 0 to ±10 V / Maximum thrust (gain configurable)	
	Position command input	Line driver signal: 20 Mpps or lower (after 4-time multiplication, non-isolated input) 2 Mpps (after 4-time multiplication, insulated input) ① Two phase pulse with phase difference ② Forward / backward direction pulse input ③ Command pulse + sign input Select from ① to ③ Electronic gear function is available	
	Contact input signal	Intelligent terminal selects 10 input terminal function by parameter (DC12 / 24 V Contact signal / Open collector signal input with internal DC24 V power supply) ① Servo ON / ② Alarm reset / ③ Control mode switch / ④ Thrust force limit / ⑤ Forward direction driving prohibited / ⑦ Multistage speed 1 to 3 / ⑧ Speed proportional control /⑨ Zero speed clamp / ⑩ Origin limit switch / ⑪ Return to origin / ⑫ Pulse train input enable / ⑬ Deviation counter clear / ⑭ Forward direction signal ⑮ Reverse direction signal / ⑯ Gain switching / ⑰ Integration clamp / ⑱ Electronic gear switching 1, 2 / ⑲ External trip (temperature sensor (Temp. signal)) / ⑳ Thrust force bias / in emergency stop	
	Contact output signal	Intelligent terminal selects 6 output terminal function by parameter (open collector signal output: sink output) ① Servo ready / ② Alarm / ③ Positioning complete / ④ Up to speed / ⑤ Zero speed detection / ⑥ Brake release / ⑦ Servo ON answer / ⑧ Thrust force limit / ⑨ Overload notice / ⑩ Magnetic pole position estimation completed / ⑪ Speed limit / ⑫ Return to origin complete / ⑬ DB status / ⑭ FOT signal monitor / ⑮ ROT signal monitor / ⑯ Driving prohibited / ⑰ Pulse train input permission answer / ⑱ In emergency stop	
	Signal monitor output	A and B phase signal output: Line driver signal output, (output dividing ratio configurable) Z phase signal output: Line driver / open collector signal output	
	Monitor output	2ch, 0 to ±5 V, to be selected by parameter from the following functions Speed detection value / thrust force command value / speed detection value / speed deviation / position deviation / current value / command pulse frequency / regenerative brake usage ratio / electronic thermal integrated value / main circuit voltage (PN voltage) / analog input value (AI 1 to 4) / output thrust force limit / forward thrust force limit / reverse thrust force limit	
Internal function	Built-in operator	Five digit numeric display, five key push button / DIP switch (Modbus communication setting)	
	External operator	Windows XP / Vista (32 bit) PC can be connected (USB 2.0 full speed)	
	Regenerative braking circuit	Built-in (but no braking resistance)	
	Dynamic brake (2)	Built-in (motion condition configurable)	
	Protective function	Overcurrent, overload, braking resistor overload, main circuit overvoltage, memory error, main circuit under voltage, CT error, CPU error 1, external trip (motor temperature error), servo ON ground detection, control circuit under voltage, servo amplifier temperature error, drive prohibition error, power module failure, safety circuit failure, emergency shutdown, encoder failure, mismatch error, power reactivation request, magnetic pole position estimation error, magnetic pole position estimation not executed, position deviation error, speed deviation error, overspeed error, momentary power failure, main circuit power supply failure, drive range error	
Operating environment	Ambient temperature / Storage temperature (3)	0 to 55˚C / -10 to 70˚C	
	Ambient humidity	20 to 90%RH (keep condensation free)	
	Vibration resistance (4)	5.9m/s² (0.6G) 10 to 55Hz	
	Service space	Altitude of 1000 m or below, indoor (no corrosive gas and dust)	
Mass		0.7kg	

Notes (1) Protection method is compliant with JEM1030.
(2) Use the dynamic brake for emergency stop.
(3) The storage temperature is the temperature during transportation.
(4) Compliant with IS C60068-2-6:2010.

Table 4 Specifications for ADVA (EtherCAT specification)

Item \ Identification Number		ADVA-R5MLEC	ADVA-01NLEC
Basic specification	Maximum rated current	1.2 Arms	
	Max. momentary current	3.6 Arms	
	Power plant capacity	0.3kVA	
	Input power (main circuit)	Single-phase 100 to 115V +10/-15% 50/60Hz ±5%	Single-phase / Three-phase 200 to 230V +10/-15% 50/60Hz ±5%
	Input power (control circuit)		Single-phase 200 to 230V +10/ -15% 50/60Hz ±5%
	Control method	Line-line sinusoidal pulse width modulation (PWM) method	
	Control mode	Position control / Speed control / Thrust force control	
Input/ Output relation function	Analog thrust force limitation	Analog input: 0 to ±10 V / Maximum speed (gain configurable)	
	Contact input signal	Intelligent terminal selects 6 input terminal function by parameter (DC12 / 24 V Contact signal / Open collector signal input with internal DC24 V power supply) ① Thrust force limit / ② Forward direction driving prohibited / ③ Backward direction driving prohibited / ④ Speed proportional control / ⑤ Zero speed clamp / ⑥ Origin limit switch / ⑦ Deviation counter clear / ⑧ Gain switching / ⑨ Integration clamp / ⑩ Encoder clear / ⑪ External trip (temperature sensor (Temp. signal)) / ⑫ Probe 1 ⑬ Probe 2 ⑭ Emergency stop	
	Contact output signal	Intelligent terminal selects 4 output terminal function by parameter (open collector signal output: sink output) ① Servo ready / ② Alarm / ③ Positioning complete / ④ Up to speed / ⑤ Zero speed detection / ⑥ Brake release / ⑦ Servo ON answer / ⑧ Thrust force limit / ⑨ Overload notice / ⑩ Alarm code 1 to 7 ⑪ Magnetic pole position estimation complete / ⑫ Near signal output ⑬ Speed limit / ⑭ Return to origin complete / ⑮ DB status / ⑯ FOT signal monitor / ⑰ ROT signal monitor / ⑱ Driving prohibited / ⑲ In emergency stop	
	Monitor output	2ch, 0 to ±5 V, to be selected by parameter from the following functions Speed detection value / thrust force command value / speed command value / speed deviation / position deviation / current value / regenerative brake usage ratio / electronic thermal integrated value / main circuit voltage (PN voltage) / analog input value (AI 3 to 4) / output thrust force limit / forward thrust force limit / reverse thrust force limit	
Internal function	Built-in operator	2-digit numeric display, DIP switch (node address setting for EtherCAT)	
	External operator	Windows XP / Vista (32 bit) PC can be connected (USB 2.0 full speed)	
	Regenerative braking circuit	Built-in	
	Dynamic brake (1)	Built-in (motion condition configurable)	
	Protective function	Overcurrent, overload, braking resistor overload, main circuit overvoltage, memory error, main circuit under voltage, CT error, CPU error 1, external trip (motor temperature error), servo ON ground detection, momentary power failure, control circuit under voltage, servo amplifier temperature error, main circuit power supply failure, drive prohibition error, power module failure, safety circuit failure, emergency shutdown, encoder failure, mismatch error, power reactivation request, network communication error, DC synchronization error, magnetic pole position estimation error, magnetic pole position estimation not executed, position deviation error, speed deviation error, overspeed error, drive range error, under voltage display	
Operating environment	Ambient temperature / Storage temperature (2)	0 to 55˚C / -10 to 70˚C	
	Ambient humidity	20 to 90%RH (keep condensation free)	
	Vibration resistance (3)	5.9m/s² (0.6G) 10 to 55Hz	
	Service space	Altitude of 1000 m or below, indoor (no corrosive gas and dust)	
Mass		0.7kg	

Notes (1) Use the dynamic brake for emergency stop.
(2) The storage temperature is the temperature during transportation.
(3) Compliant with IS C60068-2-6:2010.

● Setup software

- Used for setting, referencing, changing, printing and saving driver parameters.
- Allows for real-time monitoring of operational status and output status.
- Indicates speed and current, etc. on charts.
- Supports commissioning and gain tuning.

Table 5 Operating environment of the setup software

Item	Operating conditions
PC	DOS/V PC CPU: Pentium 4 1.8 G or higher HDD free space: 1 GB or more Display resolution: 1024x768 or higher recommended
OS	Windows Vista 32-bit SP1 Windows XP SP2 Windows 7 (32-bit, 64-bit) Windows 8 (32-bit, 64-bit)

Remark: Windows® is a registered trademark of Microsoft Corporation in USA and other countries.

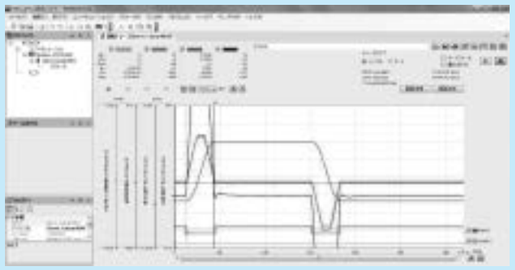

Fig. 1 Operation trace function

● Automatic tuning function

By using the automatic tuning function of the setup software for ADVA, non-expert users can easily perform high-accuracy gain adjustment.

<Operating conditions>

Main body: NT55V25/05R + ADVA-01NL/NT55V25

Carrying mass: 200g　Speed: 500mm/s　Positioning complete width: ±5μm　Traveling distance: 10mm

Acceleration/deceleration time: 12ms

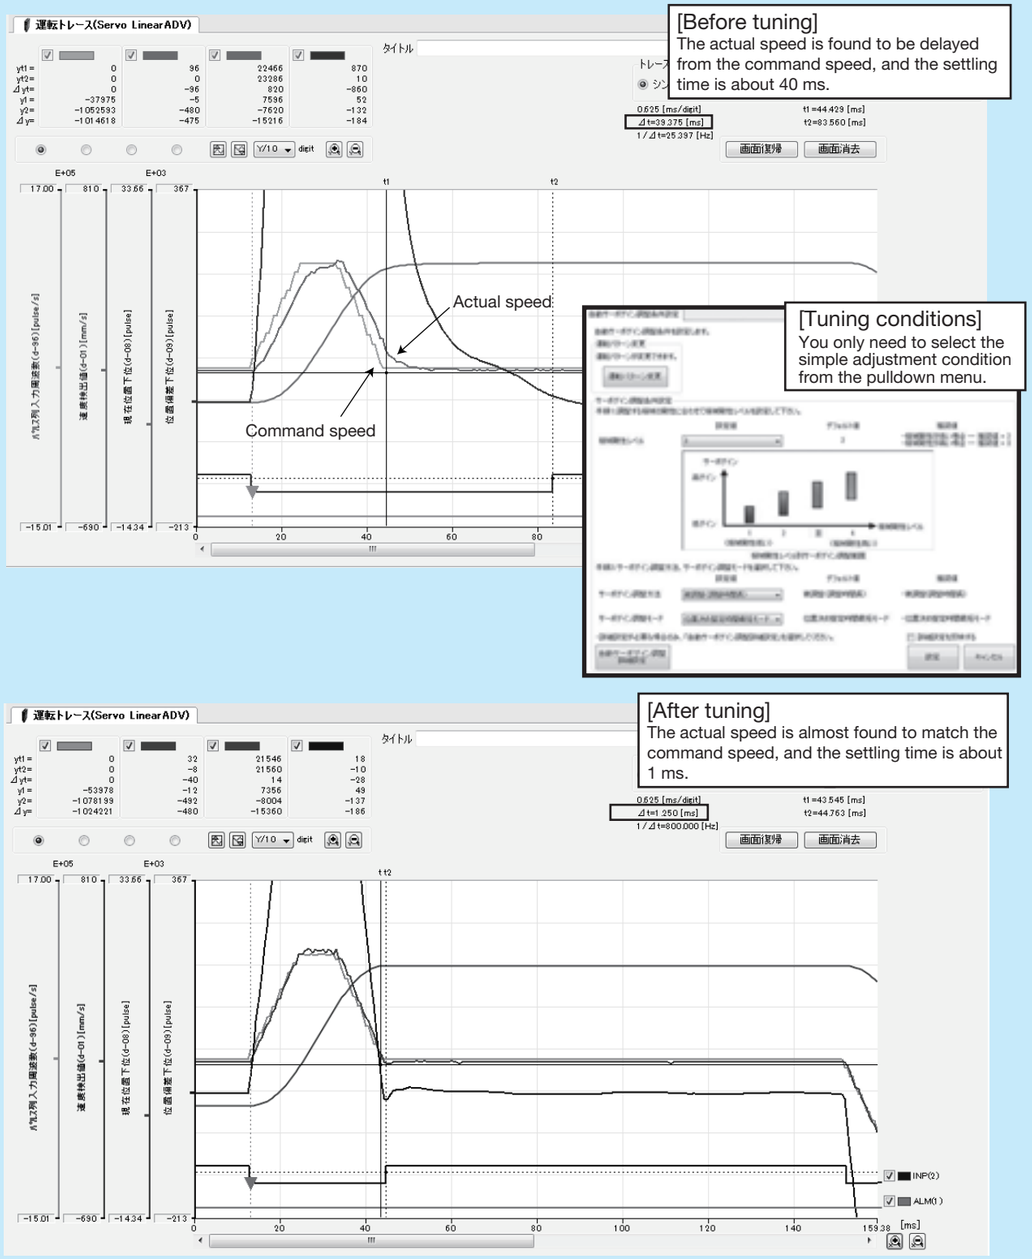

Fig. 2 Automatic tuning

MR-J4

■ Specifications for MR-J4

■ Applicable model numbers
NT series: NT55V, NT80V
SA series: all model numbers

- Supports SSCNET Ⅲ/H (high-speed serial bus). Higher speed and accuracy are realized by optical communication system.
- Servo gain adjustment, including machine resonance suppression filter, advanced vibration control II, and robust filter, can be completed simply by turning on the one-touch tuning function. Easy driving of the cutting-edge vibration suppression function allows the machine to produce its best performance.
- Machine diagnosis, startup and adjustment of linear motor can be easily performed thanks to parameter settings, monitor display and machine analyzer of the setup software (MR Configurator2).

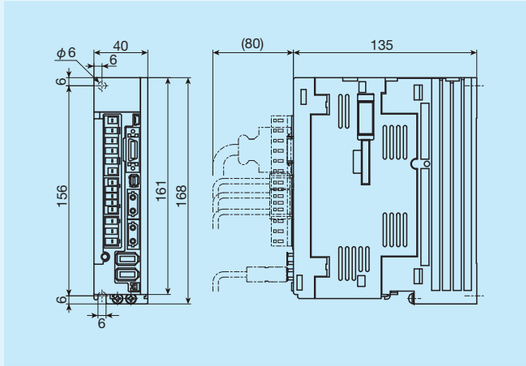

Table 6 Specifications for MR-J4

Item			Identification Number: MR-J4-10B-RJ
Basic specification	Output	Rated voltage	Three-phase AC170V
		Rated current	1.1A
	Main circuit power supply	Voltage / Frequency	Single-phase / Three-phase AC200-240V 50/60Hz
		Allowable power fluctuation	Single-phase / Three-phase AC170-264V
		Allowable frequency fluctuation	Within ± 5%
	Control circuit power supply	Voltage / Frequency	Single-phase AC200-240V 50/60Hz
		Allowable power fluctuation	Single-phase AC170-264V
		Allowable frequency fluctuation	Within ± 5%
		Power consumption	30W
	Power supply for interface		DC24V ± 10% (required current capacity: 0.3A (includes CN8 connector signal))
	Structure (protection class)		Natural air cooling and opening (IP20)
	Control method		Sine wave PWM control/current control method
	Machine end encoder interface		Mitsubishi high-speed serial communication / ABZ-phase differential input signal
Input/Output function	Encoder output pulse		Supported (ABZ-phase pulse)
	Analog monitor		2ch
Internal function	Communication function		USB: connection with personal computer, etc. (MR Configurator2 supported)
	Dynamic brake		Built-in
	Protective function		Overcurrent interrupt, regeneration overvoltage interrupt, overloading interrupt (electric thermal), servomotor overheat protection, encoder error protection, regeneration error protection, undervoltage protection, momentary power failure protection, overspeed protection, excessive error protection, magnetic pole detection protection, linear servo control error protection
Operating environment	Ambient temperature		0 to 55˚ C (keep freeze free), Storage: 20 to 65˚ C (keep freeze free)
	Ambient humidity		90%RH or lower (keep condensation free), Storage: 90%RH or lower (keep condensation free)
	Atmosphere		Indoor (no exposure to direct sun light), must be free from corrosive gas, flammable gas, oil mist and dust
	Altitude		1 000m or lower
	Vibration resistance		5.9m/s^2 or less, 10Hz to 55Hz (X, Y, Z directions)
Mass			0.8kg

NCD

■ Specifications for programmable control unit NCD171G for LT series

- Programmable controller and servo driver are unified into a compact unit.
- This unit requires fewer connection cords, which largely reduces the number of man-hours for wiring.
- Single unit of teaching box is sufficient even for operation of multiple axes.
- DC24V power supply for external I/O and sensor is built in the unit.
- Built-in I/O sequence function does not require use of sequencer if the system is not complicated.
- Various check functions make it easier to check external I/O connection.
- The program is composed of easy-to-understand command language, which helps you easily create a program.
- Flash memory is used for memory backup, so that you don't need battery change.
- Monitoring and limiting thrust force during movement is possible.
- A teaching box is available as an auxiliary storage device.
- Various return to origin methods enable return to origin operation without externally mounting a sensor.
- Using RS232C interface enables the connection to PC.
- Conformance with CE marking (low voltage command and EMC command) is confirmed.

The values in ( ) represent the dimensions of NCD171G-L6820.

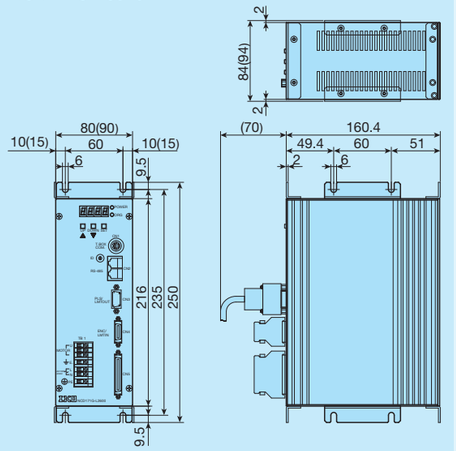

Table 7 Programmable control unit specification

Item			Identification Number	NCD171G-L2620	NCD171G-L6820
Control specification	Number of control axes			Single-axis	
	Applicable linear motor			LT100CE, LT150CE, LT130LD, LT170LD	LT130H, LT170H
	Feedback			Incremental linear encoder	
	Resolution			0.1μm, 0.5μm, and 1.0μm	
	Command input	Position control	External	+ direction/- direction pulse, position command pulse/direction command, selection of A/B phase, Max. 5MHz	
			Program	±2147483647 pulse (command maximum value)	
		Speed control	Analog	±10V/rated speed (variable by parameter) resolution 10V/372 interpolation	
Program specification	Input method			MDI, teaching, and PC input via RS232C	
	Command input type			Absolute command or incremental command	
	Program capacity			11K byte (1100 steps or more)	
	Number of positioning points			512 points	
	Function			Jump, call, repeat, speed setting, acceleration/deceleration setting, timer control, I/O control, input condition branching, various editing functions (creating, erasing, deleting, inserting, etc.)	
Input/Output Specification	Input	No. of input points		LS input: 3 points, I/O input: 20 points	
		Control input		Start, stop, emergency stop, +/- direction movement manual operation, return to origin, alarm reset, deviation counter reset, servo control, interrupt, etc. (assignment to I/O input by parameters)	
		Input method		Photo coupler bi-directional input (non voltage contact, open collector, and open emitter are supported)	
	Output	No. of output points		I/O output: 12 points	
		Operational output		In automatic operation, limit actuation, emergency stop, return to origin complete, ready complete, alarm, positioning complete, pre-origin sensor (assignment to I/O output by parameters)	
		Output type		Open emitter output (maximum open / close voltage: 30V Maximum load current: 100mA)	
	Input & output power voltage			DC24V ± 5% 500mA	
Protective function				Overcurrent, overvoltage, overload, voltage drop, encoder failure, deviation error, regeneration resistance overheating, CPU error, etc.	
Other major functions				RS232C (read, write, direct execution, etc.), software limit, thrust force limit, thrust force monitoring, speed control during travel, changing LS logic, various check functions	
General specification	Main power supply voltage			Single-phase AC200～230V±10% (1) 50/60Hz	
	Continuous rated current			0.6 Arms	2.4 Arms
	Max. momentary current			4.7 Arms	15.0 Arms
	Ambient temperature			0 to 40˚C Storage -10 to 60˚C	
	Ambient humidity			35 to 85%RH (keep condensation free)	
	Measure against power outage			Flash memory (Battery change is not required)	
Mass				Main body : 1.7kg Teaching box: 0.5kg	Main body : 1.9kg Teaching box: 0.5kg

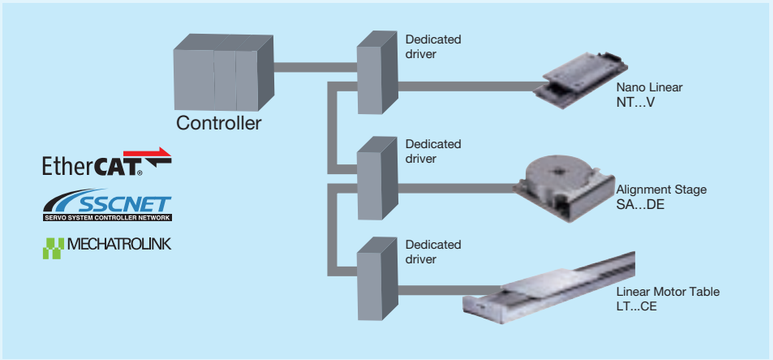
Note (1) If you need AC100V specification for NCD171G-L2620, please contact IKO.

● CE marking

Programmable control unit's CE marking is based on confirmation of conformance with the following evaluation standard.
Low voltage command : EN50178
EMC command : EN55011 Gr1 ClassA and EN61000-6-2
Conformance with EMC command has been confirmed in our selected system configuration. When the unit is incorporated into an actual machine or device, the wiring and installation conditions may be different, so that the conformance with EMC command in the machine or device requires measurement of the machine or device in the final state with LT incorporated.

Motion Network

Drivers for linear motor drive tables include those supporting motion network EtherCAT, SSCNET Ⅲ/H, and MECHATROLINK. Motion network realizes higher performance and higher accuracy of devices free from pulse frequency constraint in pulse train command, noise effects in analog command (voltage command), voltage drop due to cable length and effects of temperature drifting. Reduction of wiring can also be achieved, so synchronization system with more than one table can easily be established.



Model	Features
EtherCAT	This is an Ethernet-based open network communication system developed by Beckhoff of Germany, allowing the real time control. High speed communication and high accuracy inter-node synchronization realize the higher performance and higher accuracy of devices. In addition, Ethernet cables available on the market can be used and various wiring types can be supported.
SSCNET Ⅲ/H	This is a motion network communication system for servo system control developed by Mitsubishi Electric Corporation. It applies the optical fiber cables, so noise immunity is improved relative to conventional SSCNET.
MECHATROLINK	The open field network communication that connects the controller and various components. Developed by Yaskawa Electric Corporation and managed by MECHATROLINK Members Association.

CTN481G

IKO Programmable Controller

CTN481G (RoHS Compliant)

IKO Programmable controller is a controller for positioning control with high functionality and operability, and CTN481G is a high-end model with additional functions and compatibility with conventional CTN480G products.
As the external appearance dimensions, mounting dimensions and connector specifications are the same as those of conventional CTN480G products, this may simply replace CTN480G.
Drivers and connection cords of conventional CTN480G products can be used. For details of dimensions, contact IKO.

①Super high function type that enables to program input up to 10000 steps
②Both high speed and high resolution controls are realized with high speed pulse output up to 8 MHz.
③Four-axis linear interpolation and two-axis circular interpolation functions are available as standard functions.
④Position correction control by linear encoder is supported.
⑤Data can be stored and transferred via USB memory available on the market.
⑥By using integrated I/O sequence function, timer, counter and calculation function, a system can be configured easily without any sequencer.
⑦As the USB 1.1 interface is equipped as standard equipment, data editing, controller operations and direct execution from PC are allowed using dedicated commands.
⑧As absolute encoders of YASKAWA ELECTRIC CORPORATION, Panasonic Corporation, and Mitsubishi Electric Corporation are supported, return to origin operation at the startup is not required.
⑨The synchronization control function allows for simultaneous execution and shutdown of 2 axes possible (gantry mechanism control is possible).
⑩Multi-tasking function allows for simultaneous execution of up to 5 programs.
⑪You can correct the positioning accuracy control by entering positioning correction data in advance.
⑫Axis-dedicated input / output function makes wiring with driver easy.
⑬Up to 4 controllers (sixteen-axis control) can be connected through RS485 connection.
⑭Thanks to RS422 interface as standard equipment, LAN cable available on the market can be used and streamlined wiring by touch panel or sequencer data communication is possible.
⑮With optional units, streamlined wiring system using MECHATROLINK, SSCNETⅢ/H and EtherCAT can be supported (to be supported).

Functions and Performance

Table 1 Functions and performance

Item \ Model			CTN481G
Command pulse output specification	Number of control axis		Four-axis (executable simultaneously)
	Max. command level		±2147483647 pulses (signed 32-bit length)
	Max. output frequency		8MHz
	Acceleration / deceleration time		0 to 65.533 sec (linear / cycloid / S acceleration/deceleration)
	Output type		CW/CCW direction pulse, direction command / forward and backward pulse, and pulse with 90-degree difference
Program specification	Entry method		MDI, teaching, and PC input via USB
	Command input type		Absolute command or incremental command
	Program capacity		10 000steps
	Function		Jump, call, repeat, four arithmetic, logic operation, speed setting, acceleration/deceleration setting, timer control, I/O control, input condition branching, and various editing functions (creating, erasing, deleting, inserting and copying, etc.)
Input/Output specification	Input	No. of input points	LS input 16 points Specific input 16 points Universal input 20 points (can be extended to 80 points)
			Start, stop, emergency stop, forward / backward manual running, return to origin, present position resetting, interrupt, positioning complete, and driver arm input, etc. (selected and assigned by universal input parameters)
		Input method	Photo coupler input (non voltage contact or open collector supported)
	Output	No. of output points	Specific output 28 points Universal output 20 points (can be extended to 80 points)
		Operational output	Automatic running, limit sensor detection, emergency stop, pulse outputting, return to origin completed servo on, driver alarm resetting, proportional control, and deviation counter clear (selected and assigned by universal output parameters)
		Output type	Open collector output (DC30V; 100mA; MAX)
	Input & output power voltage		For I/O, DC24V 4 A For Limit, DC24V 100mA
Communication with external devices			USB1.1 (Mini-B type connector) RS422 (RJ-45 type connector)
Data saving			USB1.1 (A type connector)
Other major functions			USB serial communication (data reading, writing and direct execution, etc.), storage and transfer of programs via a USB memory available on the market, position correction by linear scale, backlash correction, software limit, changing limit sensor signal logic, four-axis linear interpolation, two-axis circular interpolation and check functions (I/O monitor, limit sensor monitor and shutdown conditions monitor), etc.

Table 2 General specification

Item \ Model	CTN481G
Power supply voltage	DC24V ±10%
Max. current consumption	4.5A
Ambient temperature	0~50℃ storage −10~60℃
Ambient humidity	20~85% RH (keep dewdrop free)
Measure against power outage	Flash memory
Mass (Ref.)	Main body : 1.2kg Teaching box : 0.5kg I/O add-in unit : 0.4kg

Remark: Model number of the dedicated teaching box (separately sold) is TAE10M5-TB.

● *External appearance dimensions for CTN481G*

General Explanation

IKO Selection of Precision Positioning Table

IKO Precision Positioning Table should be selected taking the points related to the required conditions into careful consideration. Typical selection procedure is shown below.

1 Check for operational condition
- Stroke length to be used
- Mounting space (height, width, length)
- Mounting direction
- Applied load size and direction
- Operation pattern
- Operating environment

2 Check for the required accuracy
- Positioning accuracy
- Positioning repeatability
- Parallelism in table motion A, B
- Straightness
- Squareness

3 Temporary selection of table model
- Feeding mechanism of slide table
- Size
- Stroke length
- Number of axes

4 Temporary selection of motor
- Type and size of motor

5 Consideration of maximum speed and resolution
- Ball screw lead
- Maximum number of revolutions of the motor
- Encoder specification

6 Consideration of operation patterns
- Marginal acceleration time
- Effective torque
- Inertia
- Positioning time

Re-consideration

Determination

7 Consideration of system
- Selection of controller
- With or without sensor
- Connection cord
- Interface with external devices

8 Final checking
- Re-check for operational condition
- Cost and delivery
- Additional machining
- Special table

IKO Characteristics of Precision Positioning Table

Series	Model	Stroke length mm	Positioning repeatability	Positioning accuracy	High speed	Rigidity
Precision Positioning Table TE	TE···B	50 ～ 800	○	○	○	○
Precision Positioning Table TU	TU	30 ～ 1 400	○	○	○	○

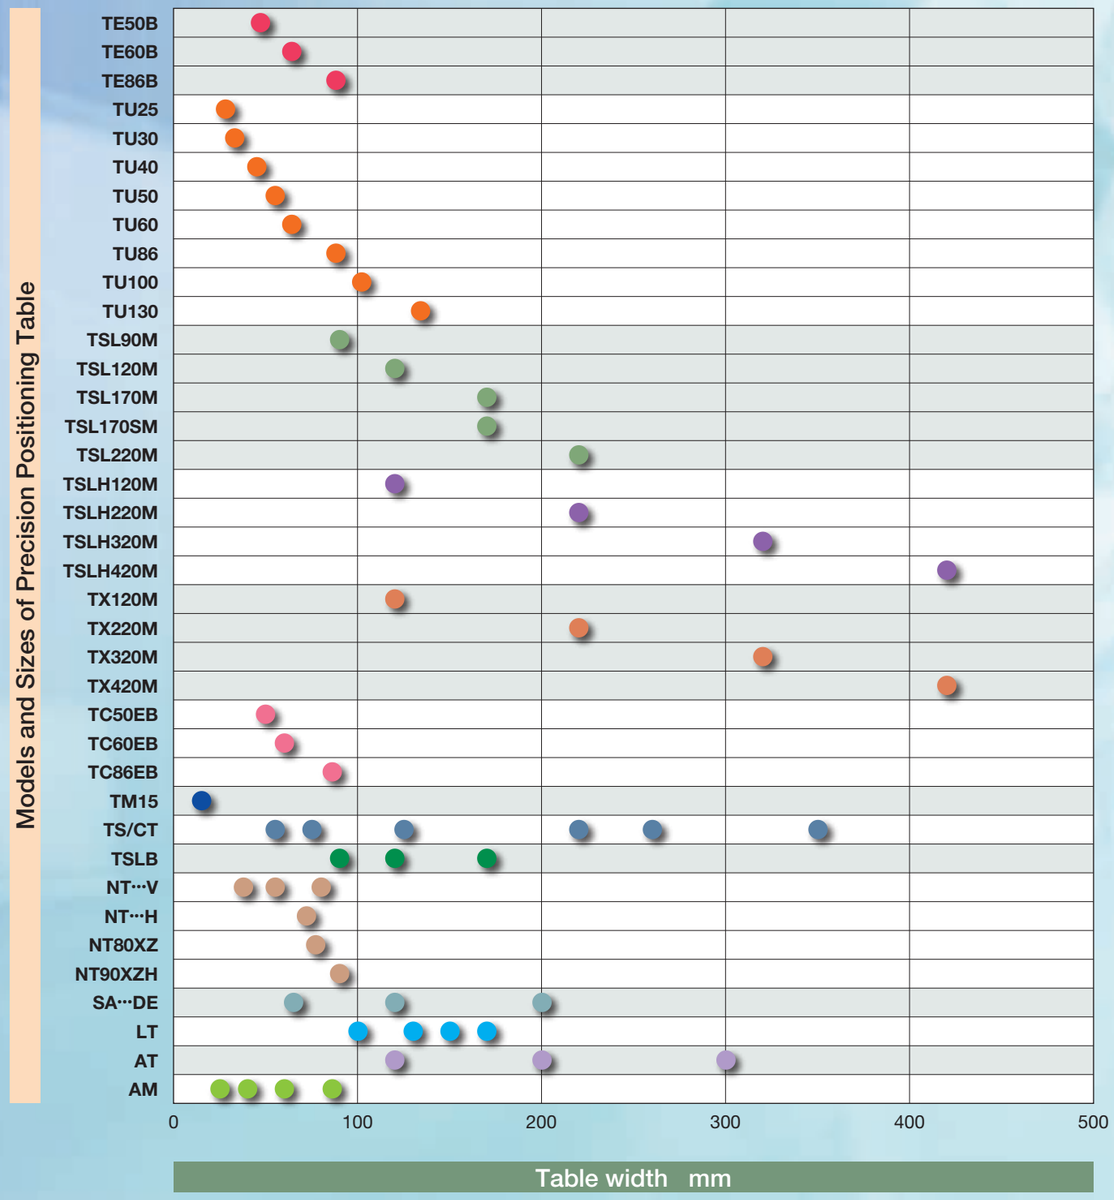
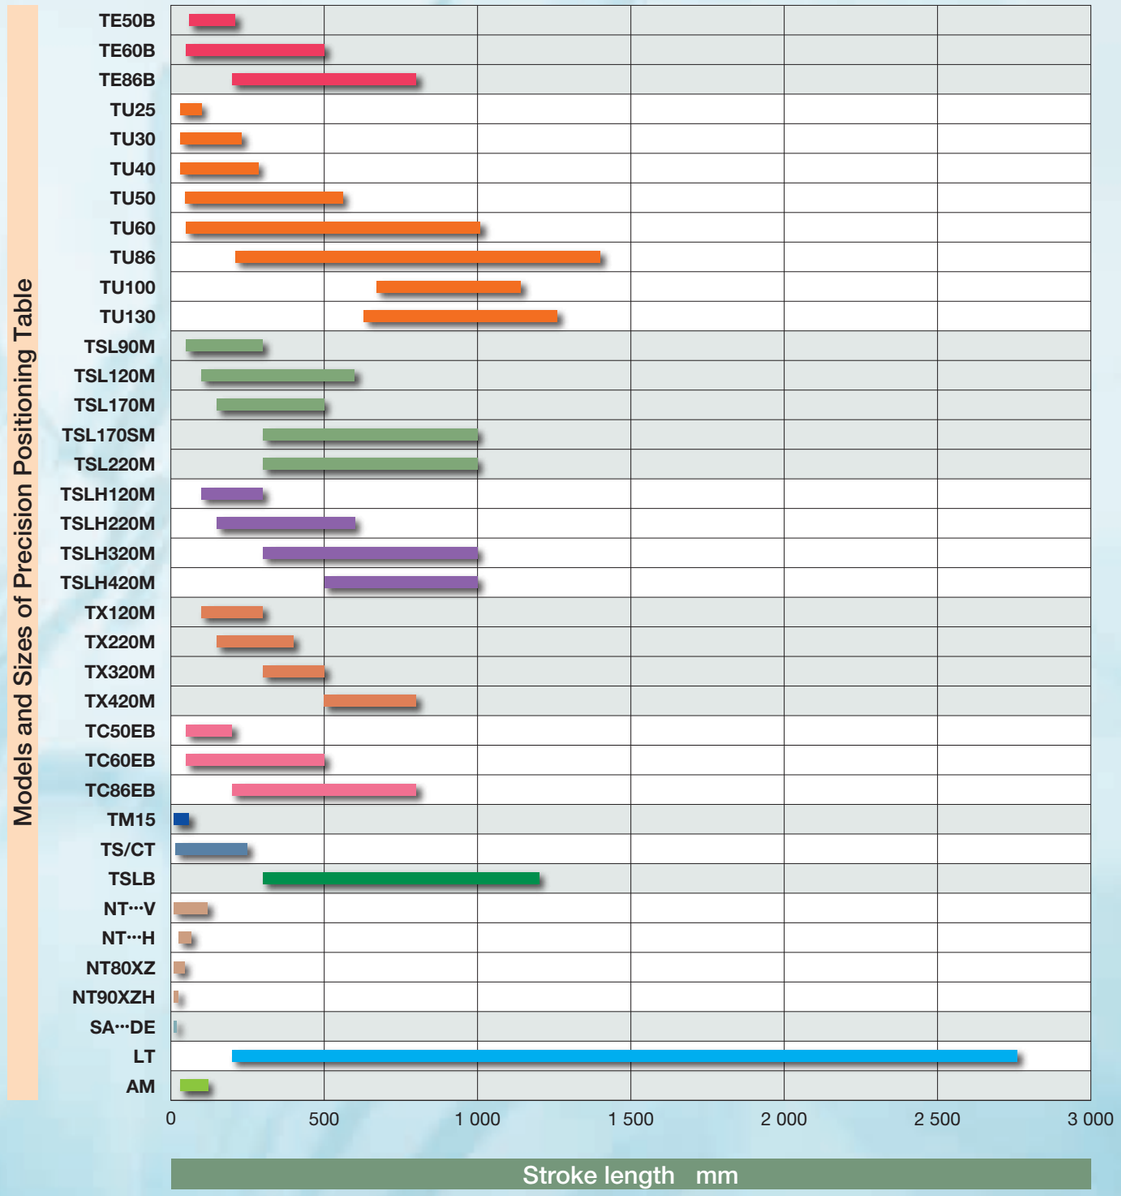
Size of Precision Positioning Table



How to see the above graph

- The values shown in the graph are for reference. For details, see the explanation of each model.

Stroke Length of Precision Positioning Table

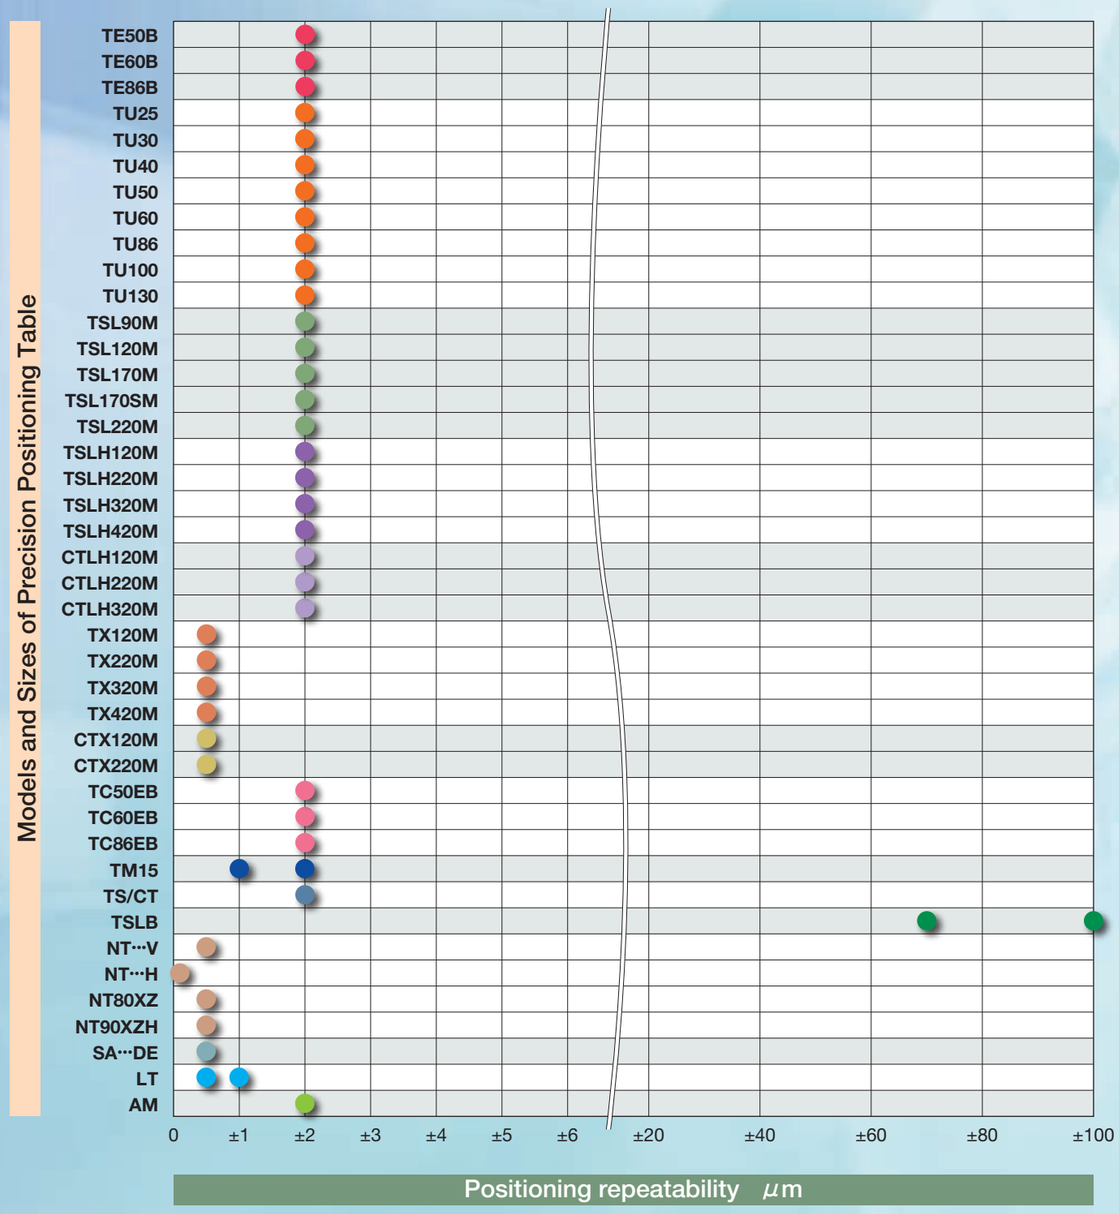


How to see the above graph

- The values shown in the graph are for reference. For details, see the explanation of each model.
- Length of a bar represents a standardized range of stroke length.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

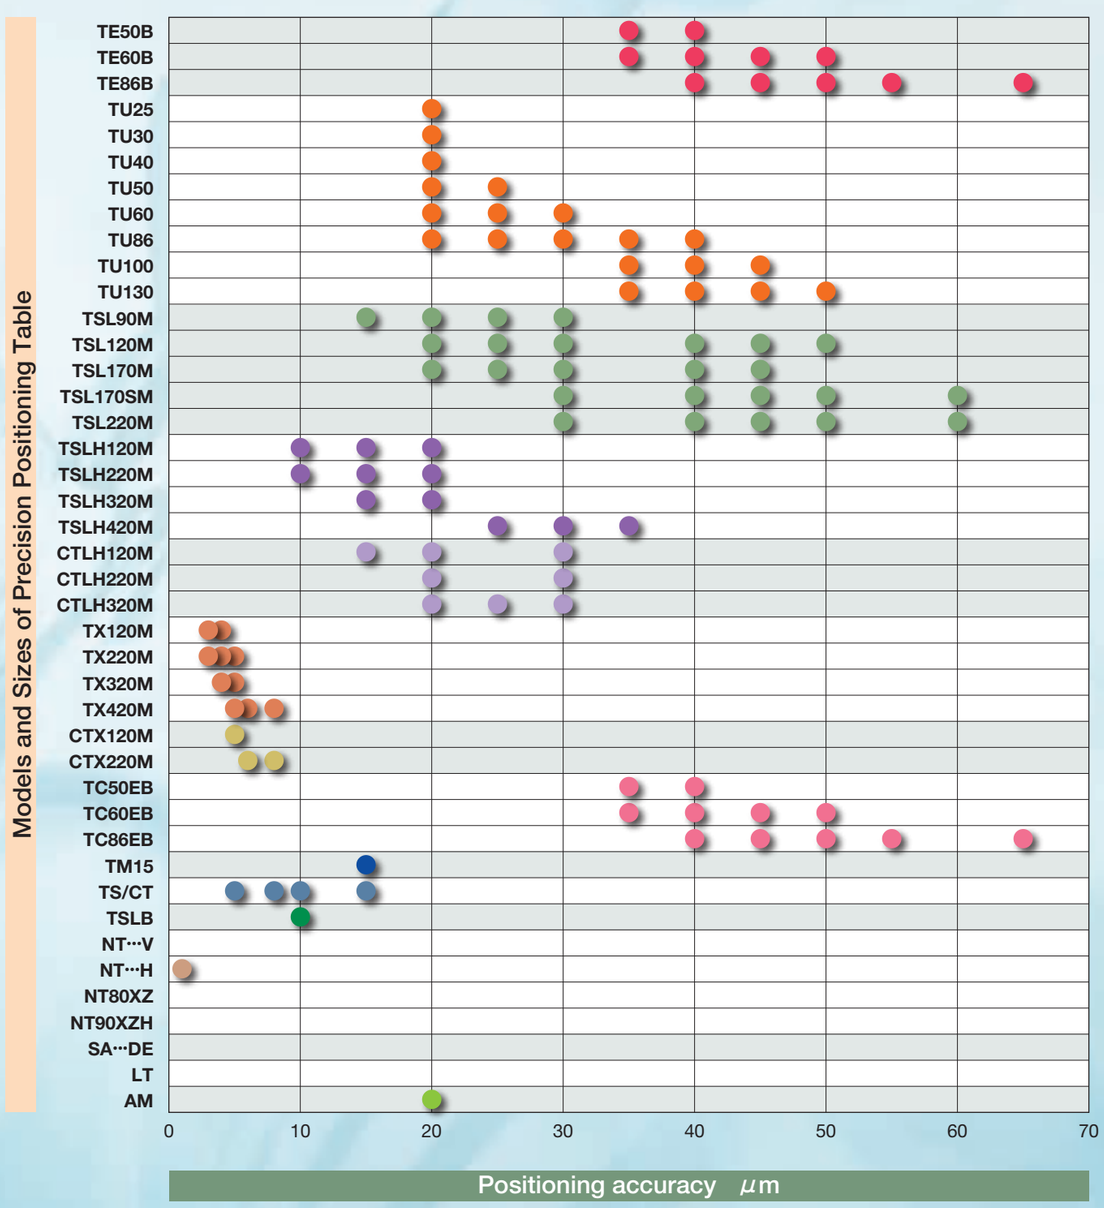
Positioning Repeatability of Precision Positioning Table



How to see the above graph

- The values shown in the graph are for reference. For details, see the explanation of each model.
- For models of ball screw drive, the value of the case selected ground ball screw is indicated.
- When two or more values are indicated for a model, this means that the applicable value depends on the stroke length.
- For TU, the value of the standard table is indicated.
- CTLH···M, CTX···M and CT are tables of two-axis specification.
- SA···DE represents value in X-axis.

Positioning Accuracy of Precision Positioning Table

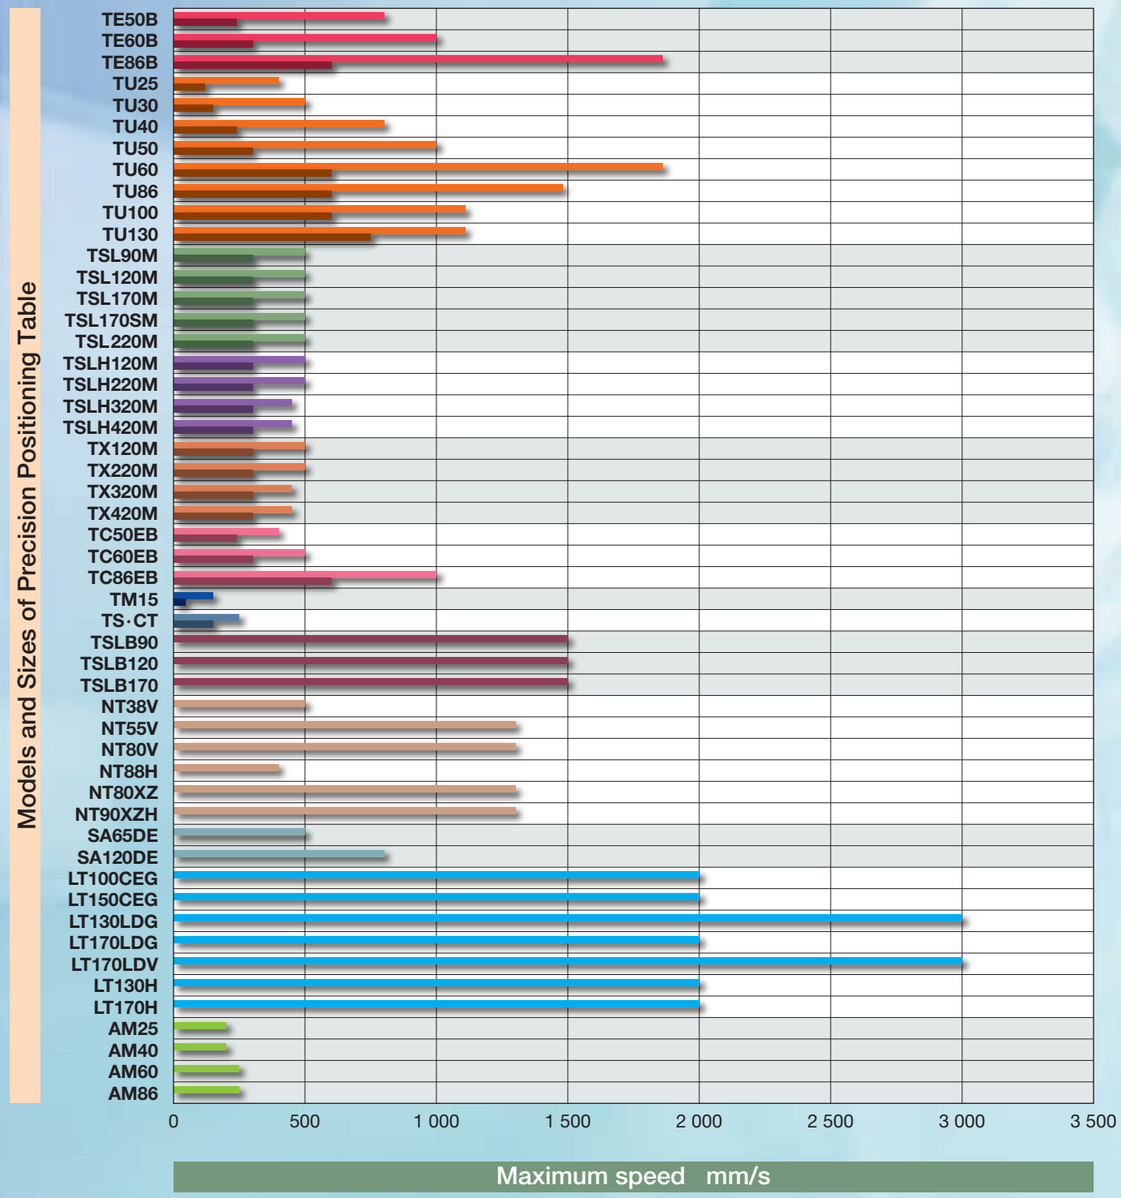


How to see the above graph

- The values shown in the graph are for reference. For details, see the explanation of each model.
- For models of ball screw drive, the value of the case selected ground ball screw is indicated.
- When two or more values are indicated for a model, this means that the applicable value depends on the stroke length.
- For TU, the value of the standard table is indicated.
- CTLH···M, CTX···M and CT are tables of two-axis specification.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

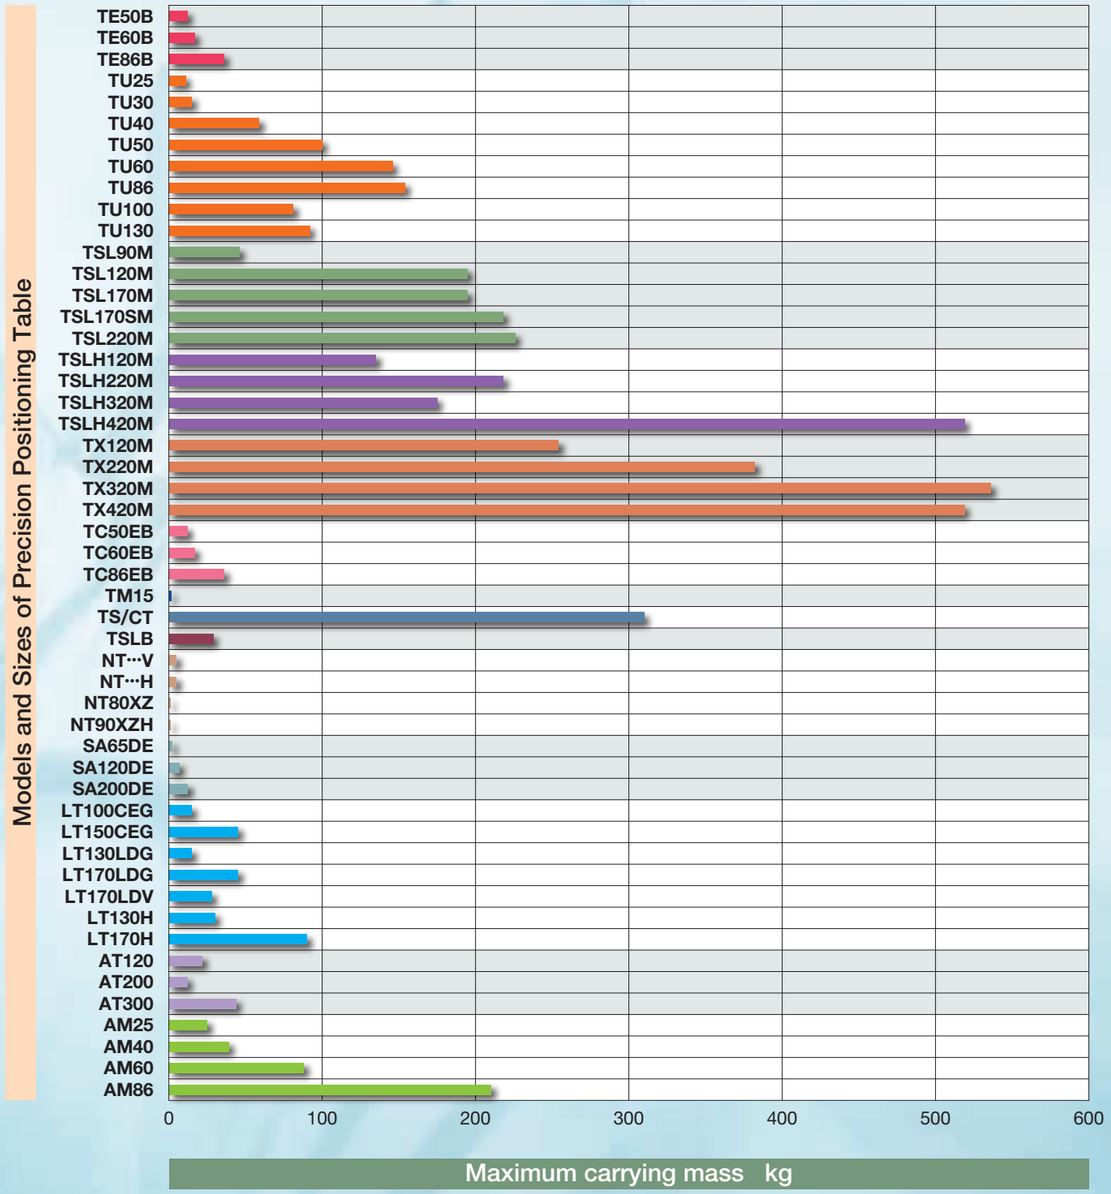
Maximum Speed of Precision Positioning Table



How to see the above graph

- The values shown in the graph are for reference. For details, see the explanation of each model.
- For models of ball screw drive, the value with the longest ball screw lead allowable is indicated.
- The upper sections indicate values of AC servomotor, whereas the lower sections indicate values of stepper motor specification.
- The ball screw drive type may sometimes be restricted by the allowable number of revolution of ball screw depending on the stroke length.

Carrying Mass of Precision Positioning Table



How to see the above graph

- The values shown in the graph are for reference. For details, see the explanation of each model.
- Values of LT, NT···V, NT···H, NT···XZ, NT···XZH, and SA···DE indicate the maximum load masses.

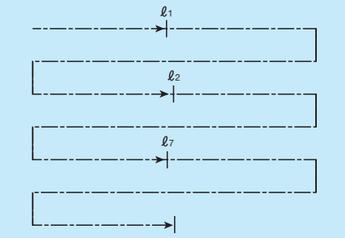
1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Accuracy

Accuracy standard of precision positioning table varies depending on models and measurement methods are described below. In addition, model testing according to the use conditions such as dynamics testing may be conducted on request. Please contact IKO for details.
Precision positioning table is supplied with an inspection sheet or certificate of passing inspection regarding accuracy standard of each model.

Positioning repeatability

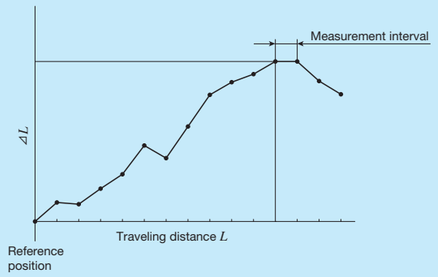
Repeat positioning to any one point from one direction 7 times to measure the stop position and obtain 1/2 of the maximum reading difference.
In principle, perform this measurement at the center and each end of the stroke length and take the maximum obtained value as the measurement value. Indicate the 1/2 of the maximum difference with ±.



1/2 of largest difference in measurement values, ℓ_1, ℓ_2, $\cdots\ell_7$

Positioning accuracy

Perform positioning successively in the certain direction from the reference position, measure the difference between actual travel distance at each position and the theoretical travel distance, and indicate the maximum difference within the stroke length as an absolute value.



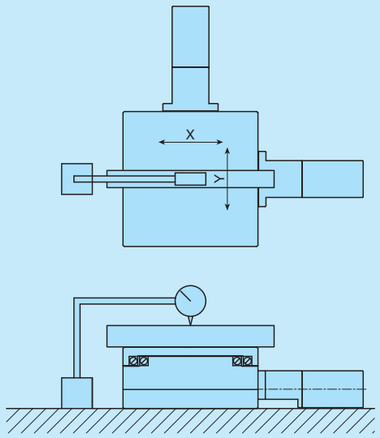
ΔL = (Distance actually traveled) − (Command value for traveling distance)

Parallelism in table motion A

Refers to parallelism (indicator fix) of the slide table motion and flat surface (precision positioning table mounting surface).

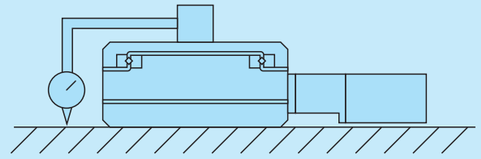
● When the stroke is shorter than the slide table length
Fix the test indicator on the stool on which the precision positioning table is mounted, place the straight-edge on the slide table, and apply the test indicator at the center of the slide table. Make a measurement across almost whole area of the stroke length in X and Y directions, and take the maximum reading difference as a measurement value.

● When the stroke is longer than the slide table length
Fix the test indicator on the stool on which the precision positioning table is mounted, place the straight-edge on the slide table, and apply the test indicator at the center of the slide table. Make a measurement across almost whole area of the stroke length while moving the table by the length of the table during strokes in X and Y directions, and take the maximum reading difference as a measurement value.



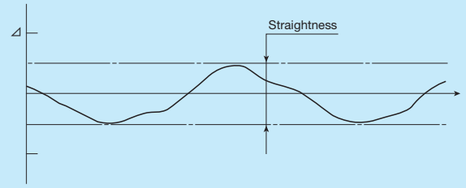
Parallelism in table motion B

Refers to parallelism (indicator travel) of the slide table motion and flat surface (table mounting surface).
Fix the indicator at the center of the slide table, apply the test indicator on the stool on which the precision positioning table is mounted, make a measurement across almost whole area of the stroke length in X and Y directions, and take the maximum reading difference as a measurement value.



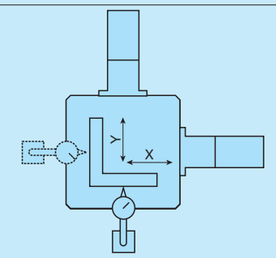
Straightness

Refers to an extent of deviation from the ideal straight line of the slide table motion, which should be linear.
・Straightness in horizontal: Motion of the slide table travel axis in left and right (horizontal) direction.
・Straightness in vertical: Motion of the slide table travel axis in up and down (vertical) direction.
These are measured by a test bar and indicator or laser running straightness measurement system. The measurement value is represented by the interval between two straight lines in parallel with each other, when placed so that the interval becomes minimal.



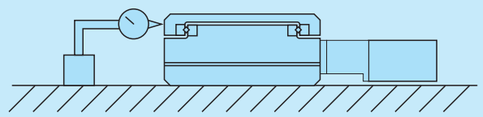
Squareness of XY motion

Refers to squareness of X-and Y-axis motions.
Fix a square scale on the slide table taking either travel axis direction as a reference, apply the test indicator perpendicular to the reference travel axis and take the maximum reading difference within the stroke length of the axis as a measurement value.



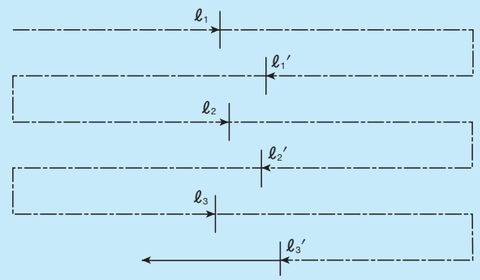
Backlash

Feed to the slide table and take reading of the test indicator when it is moved slightly as a reference. Then, move the slide table in the same direction with the given load from such condition without the feed gear and release the load. Obtain the difference from the reference value at this point.
Perform this measurement at the center and each end of the stroke length and take the maximum obtained value as the measurement value.



Lost motion

Perform positioning in the forward direction for one position and measure the position (ℓ_1 in the figure). Then give a command to move it in the same direction and give the same command in the backward direction from the position to perform positioning in the backward direction. Measure the position (ℓ_1' in the figure). Further, give a command to move it in the backward direction and give the same command in the forward direction from the position to perform positioning in the forward direction. Measure the position (ℓ_2 in the figure). Subsequently, repeat these motions and measurements and obtain the difference between average values of stop position of the 7 positionings in forward and backward directions.
Perform this measurement at the center and each end of the motion and take the maximum obtained value as the measurement value.



Measurement value of lost motion

$$= \left|\frac{1}{7}(\ell_1+\ell_2+\cdots\ell_7)-\frac{1}{7}\left(\ell_1'+\ell_2'+\cdots+\ell_7'\right)\right|\max$$

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

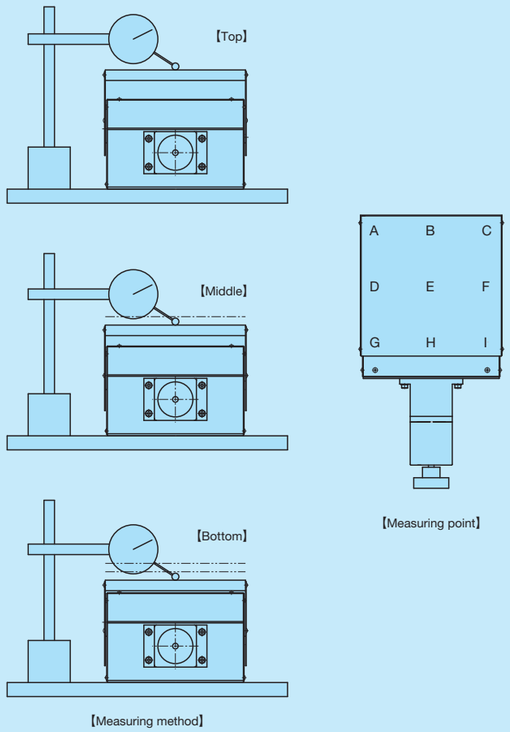
Measurement of parallelism during table elevating

At the lower most step of the table (H_{min}), align the indicator with 0 value at the measurement point E on the table upper surface with the table mounting surface as a reference, and measure heights at the remaining 8 points (A to I) with the value as a reference.
Lift up the table and perform the same measurement at middle (H_{mid}) and upper (H_{max}) steps. Then obtain each maximum difference between measurement values at the same point at lower, middle and upper steps.
Take the maximum difference value among all the 9 points as the parallelism during table elevating.

[Sample calculation of parallelism during table elevating]

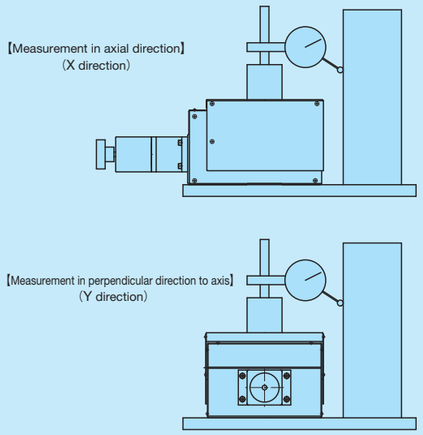
Measuring point	Measurement value (μm)			
	Lower	Middle	Upper	Maximum difference
A	1	2	1	1
B	2	−1	3	4
C	3	4	5	2
D	4	2	1	3
E	0	0	0	0
F	−1	2	3	4
G	−2	3	3	5
H	−3	2	3	6
I	−4	−2	−4	2

If measurement values are as those indicated in the table, the maximum difference value among all points should be 6μm at the point H.
As a result, the parallelism during elevating of this table is 6μm.



Measurement of squareness during table elevating

The squareness during table elevating relative to a square scale shall be the squareness during table elevating.
At the lower step of the table (H_{min}), align the indicator with 0 relative to a square scale. The maximum difference in pick test deflection at the time when it is stroked from the lower step of the table (H_{min}) to the upper step (H_{max}) in the condition shall be the squareness during table elevating. (Straightness component at the time of table stroke is included.)
Place a square scale at the position 10mm away from the table edge, make a measurement for 2 directions, ball screw axial direction and direction perpendicular to the axis - and take the maximum value between the 2 values as the straightness during table elevating.



Carrying Mass, Load Mass, Allowable Load

■ Maximum carrying mass

The maximum carrying mass is the mass that satisfies the following ①, ②, and ③. It is set for TE···B, TU, TSL···M, TSLH···M, TX···M, TC···EB, TM, TS/CT, TSLB, AT, AM, TZ, and TZ···X. The value changes by the position of the mass loaded (length L, height H). It is calculated by the formula (L, H) = (0, 0).

① The mass for which the rating life of the linear motion rolling guide, ball screws or support bearings is 18,000 hours when continually driving at the maximum speed for each model and size with the acceleration/deceleration time of 0.2s.
② The mass for which the acceleration 0.3G can be acquired in general.
③ The mass calculated based upon the basic static load rating of the linear motion rolling guide you are using.

Note that the value calculated varies depending on various conditions, such as the size, ball screw specifications, slide table length, or stroke length. The value shown at the specifications of each model was calculated based on the most severe conditions that are typical for each size. For detailed values, please contact IKO.

■ Maximum load mass

The maximum load mass refers to the maximum mass of a steel cube that ensures necessary acceleration: acceleration 0.5G for linear motion and acceleration 0.5G in outer circumferential for rotational motion. It is restricted by thrust (torque) characteristics of the motor used, and the larger the carrying mass is, the longer the marginal acceleration time becomes. For linear motor drive models (LT, NT···V, NT···H, NT···XZ and NT···XZH) and direct drive models (SA···DE), the dynamic load mass representing the relation between acceleration and load mass in standard traveling models is set.

■ Allowable load

Allowable load refers to the maximum static load that can ensure normal functions and performance when used horizontally. It is set for RT.

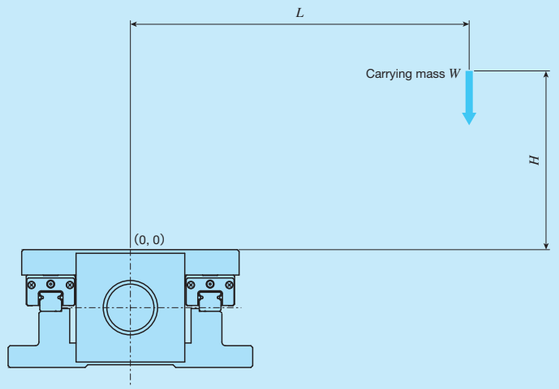


Fig. 1 Carrying mass position

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Maximum Speed and Resolution

■ Maximum speed

The maximum speed of precision positioning table is defined by the following equation.
The ball screw drive type is restricted by the allowable number of ball screw revolutions which vary by the stroke length. For the timing belt drive, it is calculated with the maximum number of motor revolutions of 900(min^{-1}). See the specifications of each model for details.
Each linear motor drive model has fixed maximum speed. See the specifications of each model.

Ball screw drive

$$\text{Maximum speed (mm/s)} = \text{Ball screw lead (mm)} \times \frac{\text{Allowable number of revolutions of ball screw } (min^{-1})}{60}$$

Timing belt drive

$$\text{Maximum speed (mm/s)} = \text{Pulley pitch diameter} \times \pi\,\text{(mm)} \times \frac{\text{Maximum number of revolutions of the motor } (min^{-1})}{60}$$

(Pulley pitch diameter$\times\pi$= 100mm)

To obtain the actual positioning time, the operation pattern must be considered according to conditions such as acceleration / deceleration time and stroke length. See the section of consideration of operation patterns.

■ Resolution

Resolution refers to the minimum feed rate allowed for precision positioning table and can be obtained by the following equation.
Each linear motor drive model has fixed resolution. See the specifications of each model.

Ball screw drive

$$\text{Resolution (mm/pulse)} = \frac{\text{Ball screw lead (mm)}}{\text{Number of fraction sizes per motor rotation (pulse)}}$$

Timing belt drive

$$\text{Resolution (mm/pulse)} = \frac{\text{Pulley pitch diameter} \times \pi\ \text{(mm)}}{\text{Number of fraction sizes per motor rotation (pulse)}}$$

(Pulley pitch diameter$\times\pi$= 100mm)

Consideration of Operation Patterns

■ Calculation of positioning time

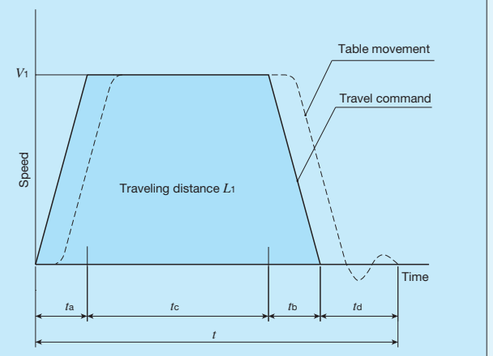
The positioning time taken when the precision positioning table actually moves can be obtained by the following equation.
For applications requiring high precision positioning, the settling time from completion of command pulse input to full stop of the table at the positioning point and vibration damping time of the machine device must be considered in addition to the constant speed traveling time and acceleration / deceleration time.

Long-distance positioning

Long distance in this context refers to distance for which there is enough constant speed traveling time even taking into account the acceleration / deceleration time.

$$t = \frac{L_1}{V_1} + \frac{t_a + t_b}{2} + t_d$$

where t : Positioning time s
t_a, t_b : Acceleration/deceleration time s
t_c : Constant speed traveling time s
t_d : Settling time s
L_1 : Traveling distance mm
V_1 : Traveling speed (set speed) mm/s

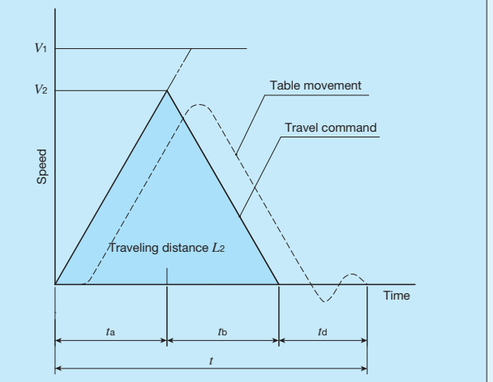


Short-distance positioning

Short distance in this context refers to distance for which there is no constant speed traveling time because deceleration occurs before reaching to constant speed traveling.

$$t = \frac{L_2}{V_2} + \frac{t_a + t_b}{2} + t_d$$

where t : Positioning time s
t_a, t_b : Acceleration/deceleration time s
t_d : Settling time s
L_2 : Traveling distance mm
V_1 : Set speed mm/s
V_2 : Traveling speed mm/s



1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

■ Calculation of marginal acceleration time

Torque (thrust force) required for driving of precision positioning table comes to the highest during acceleration. Torque (thrust force) required for this acceleration is limited by motor output torque (linear motor thrust force). Therefore, the marginal acceleration time with table used horizontally is calculated by the following equation.

For ball screw drive and timing belt drive

● Applied torque T_L

$T_L = T_0 + \mu W g \cdot \frac{\ell}{2\pi\eta}$ [N·m] ……Ball screw drive

$T_L = T_0 + (Wg \times \text{Wedge reduction ratio}) \cdot \frac{\ell}{2\pi\eta}$ [N·m] …Applicable to TZ

$T_L = T_0 + \mu W g \cdot \frac{r}{\eta}$ [N·m] ……Timing belt drive

● Acceleration torque T_a

$T_a = (J_T + J_M + J_C + J_L) \cdot \frac{2\pi N}{60 t_a}$ [N·m]

$J_L = W \cdot \left(\frac{\ell}{2\pi}\right)^2$ [kg·m²] ……Ball screw drive

$J_L = W \cdot \left(\frac{\ell}{2\pi}\right)^2 \times \text{Wedge reduction ratio}^2$ [kg·m²] ……Applicable to TZ

$J_L = W \cdot r^2$ [kg·m²] ……Timing belt drive

● Torque required for acceleration T_P

$T_P = T_L + T_a$ [N·m] $(T_P \times k < T_M)$

● Marginal acceleration time t_a

$t_a = (J_T + J_M + J_C + J_L) \cdot \frac{2\pi N}{60} \cdot \frac{k}{T_M - T_L}$ [s]

[In case of AT]

● Applied torque T_L

$T_L = T_0 + \mu W g \cdot \frac{\ell}{2\pi\eta}$

● Carrying mass inertia J_L

$J_L = W \cdot \left(\frac{\ell \cdot R_0}{2\pi L}\right)^2$

● Distance to rotator L

Model	ℓ [m]	L [m]
AT120A	0.001	0.100
AT200A	0.001	0.130
AT300A	0.002	0.186

T_0 : Starting torque N·m
μ : Friction coefficient of rolling guide (0.01)
W : Carrying mass kg
ℓ : Ball screw lead m
r : Pulley pitch radius (0.0159m)
η : Efficiency 0.9
J_T : Table inertia kg·m²
J_M : Motor inertia kg·m²
J_C : Coupling inertia
J_L : Carrying mass inertia kg·m²
N : Number of revolutions of motor min⁻¹
t_a : Acceleration time s
g : Gravity acceleration (9.8m/s²)
T_M : Motor output torque N·m
・For the stepper motor, it is the output torque at the number of motor revolutions N.
・For the AC servomotor, it is the maximum (momentary) torque at the number of revolutions N.
k : Factor of safety
(AC servomotor : 1.3)
(stepper motor : 1.5~2)
Wedge reduction ratio: 0.5 in case of 1 : 2
: 0.25 in case of 1 : 4
R_0 : Distance from the center of the table to the center of gravity of the load m
L : Distance from the center of the table to the rotator m

In case of linear motor drive

● Force from acceleration F_a

$F_a = (W_L + W_T) \cdot \frac{V}{t_a}$ [N]

● Thrust force required for acceleration F_P

$F_P = F_a + F_L$ [N]

● Marginal acceleration time t_a

$t_a = \frac{(W_L + W_T) \cdot V \cdot k}{F_M - F_L}$ [s]

μ : Friction coefficient of rolling guide (0.01)
W_T: Mass of moving table kg
W_L: Carrying mass kg
F_R : Running resistance N
(LT130H: 20N)
(LT170H: 40N)
F_c : Cord pull-resistance(1) N
(LT Series: About 1.0N)
(NT Series: None)
F_M: Linear motor thrust force N
(maximum thrust at traveling speed V)
t_a : Acceleration time s
V : Traveling speed m/s
g : Gravity acceleration 9.8 m/s²
k : Factor of safety (1.3)

Note (1) Cord pull-resistance varies depending on cord mass and how to pull it. Use the an expected resistance value for calculation.

[In case of LT···CE, LT···LD]

● Friction resistance of rolling guide F_f
$F_f = \mu\ (W_L + W_T)\ g$ [N]
However, minimum value of F_f shall be as follows.
For LT100CE: 2.5N
For LT150CE: 5.0N
For LT130LD: 6.0N
For LT170LD: 6.0N

● Force from running resistance F_L
$F_L = F_f + F_c$ [N]

[In case of LT···H]

● Running resistance F_R
LT130H: 20N, LT170H: 40N

● Speed coefficient f_V

Traveling speed V[m/s]	LT130H	LT170H
0.5 or less	1	
Above 0.5 and below 1.0	1.5	
Above 1.0 and below 1.5	2.25	

● Force from running resistance F_L
$F_L = f_V \cdot F_R + F_c$ [N]

[In case of NT38V]

● Force from running resistance F_L
F_L = 0.25N

[In case of NT55V/NT80V]

● Force from running resistance F_L
F_L = 1.5N

[In case of NT80XZ]

● Force from running resistance F_L
Horizontal axis: F_L = 1.5N
Vertical axis: F_L = 0.5N (2)

[In case of NT90XZH]

● Force from running resistance F_L
Horizontal axis: F_L = 2.0N
Vertical axis: F_L = 2.0N (2)

[In case of NT88H]

● Force from running resistance F_L
F_L = 0.5N

Note (2) It is the resistance value for the stroke of ±5mm from the equilibrium point in the center area of the stroke range, assuming the spring system balance mechanism of the vertical axis.
The value changes depending on the spring mounting position or the stroke width in the actual calculation. Please verify using the actual machine.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Consideration of Operation Patterns

In case of direct drive (SA···DE)

[In case of SA···DE/X(Y)]

● Friction resistance of rolling guide F_f

F_f value shall be as follows.

In case of SA65DE/X 0.5N

In case of SA120DE/X 3.0N

● Force from running resistance F_L

$F_L = F_f + F_c$ [N]

● Force from acceleration F_a

$$F_a = (W_L + W_T) \cdot \frac{V}{t_a} \text{ [N]}$$

● Thrust force required for acceleration F_P

$F_P = F_a + F_L$ [N]

● Marginal acceleration time t_a

$$t_a = \frac{(W_L + W_T) \cdot V \cdot k}{F_M - F_L} \text{ [s]}$$

[In case of SA···DE/S]

● Friction resistance of rolling guide M_f

M_f value shall be as follows.

In case of SA65DE/S 0.03N·m

In case of SA120DE/S 0.1N·m

In case of SA200DE/S 0.2N·m

● Torque from rotation resistance M_L

$M_L = M_f + M_c$ [N]

● Torque from acceleration M_a

$$M_a = (J_L + J_T) \cdot \frac{R}{t_a} \text{ [N·m]}$$

● Torque required for acceleration M_P

$M_P = M_a + M_L$ [N·m]

● Marginal acceleration time t_a

$$t_a = \frac{(J_L + J_T) \cdot R \cdot k}{M_M - M_L} \text{ [s]}$$

W_T: Mass of moving table kg
W_L: Carrying mass kg
F_c : Cord pull-resistance(1) N
F_M: Linear motor thrust force N
(maximum thrust at traveling speed V)
t_a : Acceleration time s
V : Traveling speed m/s
k : Factor of safety (1.3)

Note (1) Cord pull-resistance varies depending on cord mass and how to pull it. Use the an expected resistance value for calculation.

J_L : Inertia moment of load kg·m²
J_T : Inertia moment of moving table kg·m²
M_c : Cord pull-resistance(1) N·m
M_M: Alignment stage torque N·m
t_a : Acceleration time s
R : Traveling speed rad/s
k : Factor of safety (1.3)

Note (1) As there is no cord for θ-axis moving table, set the cord pull-resistance to 0 if the load does not pull cord.
Calculate the inertia moment of load by referencing calculation formulas below.

Calculation of inertia moment

p: density, m: mass

Cylinder	Quadrangular prism	Offset rotation
		$J_L = \frac{1}{2} \cdot \pi \cdot p \cdot t \cdot r^4 = \frac{1}{2} \cdot m \cdot r^2$	$J_L = \frac{1}{12} \cdot p \cdot a \cdot b \cdot c \cdot (a^2 + b^2) = \frac{1}{12} \cdot m \cdot (a^2 + b^2)$	$J_L' = J_L + m \cdot r_3^2$ J_L': Inertia moment from rotation center J_L : Inertia moment when rotating around the center of gravity

■ Calculation of effective torque and effective thrust force

As a large torque (thrust force) is required for acceleration / deceleration when the precision positioning table is driven, the effective torque (effective thrust force) may become larger than the motor's rated torque (rated thrust) depending on the operation rate of each pattern in case the AC servomotor or linear motor drive is used. Continuing the operation in this condition may cause overheating and seizure of the motor. So ensure that the effective torque (effective thrust force) is smaller than motor's rated torque (rated thrust). The effective torque (effective thrust force) by the operation pattern of table is calculated by the following equation.
If the rated torque (rated thrust) of the motor is larger than the effective torque (effective thrust force), continuous operation according to the operation pattern is possible.

If AC servomotor is used

● Effective torque T_{rms}

$$T_{rms} = \sqrt{\frac{T_P^2 \times t_a + (T_P - 2 \times T_L)^2 \times t_a + T_L^2 \times t_c}{t}} \text{ [N·m]}$$

In case of linear motor drive

● Effective thrust force F_{rms}

$$F_{rms} = \sqrt{\frac{F_P^2 \times t_a + (F_P - 2 \times F_L)^2 \times t_a + F_L^2 \times t_c}{t}} \text{ [N]}$$

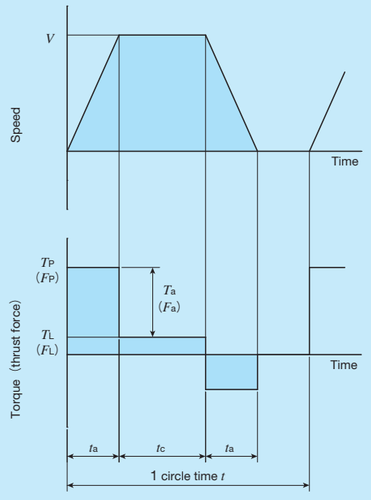
In case of direct drive (SA···DE)

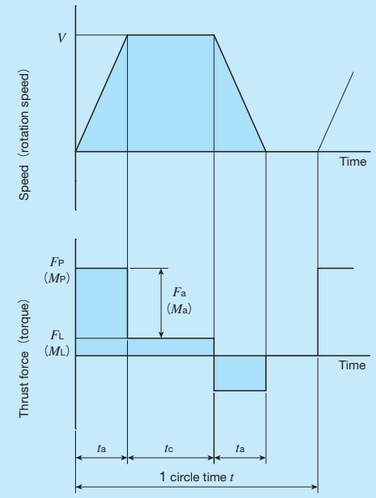
● Effective thrust force (applicable to SA···DE/X(Y)) F_{rms}

$$F_{rms} = \sqrt{\frac{F_P^2 \times t_a + (F_P - 2 \times F_L)^2 \times t_a + F_L^2 \times t_c}{t}} \text{ [N]}$$

● Effective torque (applicable to SA···DE/S) M_{rms}

$$M_{rms} = \sqrt{\frac{M_P^2 \times t_a + (M_P - 2 \times M_L)^2 \times t_a + M_L^2 \times t_c}{t}} \text{ [N·m]}$$





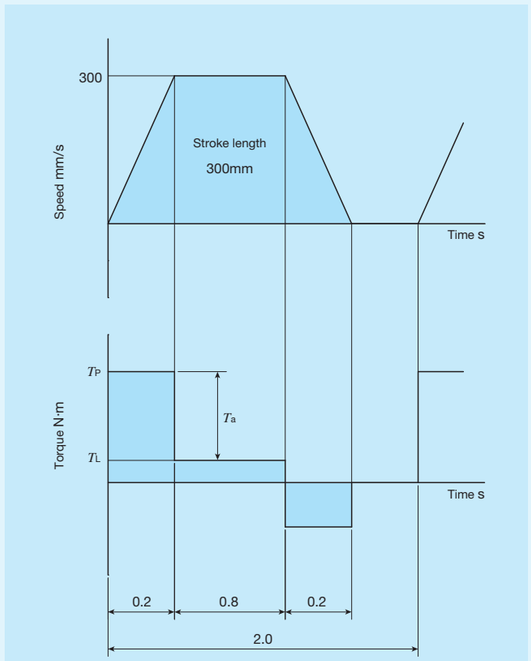
1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

■ Consideration example of operation pattern

If AC servomotor is used

● Usage conditions

Mounting direction		Horizontal usage
Carrying mass	W	30kg
Stroke length	L	300mm
Traveling speed (set speed)	V	300mm/s
Acceleration/deceleration time	t_a	0.2s
Constant speed traveling time	t_c	0.8s
1 cycle time	t	2.0s



● Temporary selection of positioning table
Temporarily select TU60S49/AT103G10S03.

Basic specification

Ball screw lead	ℓ	10mm
Stroke length		300mm
Maximum speed		500mm/s
Starting torque	T_S	0.08N·m
Table inertia	J_T	0.93×10^{-5}kg·m²
Coupling inertia	J_C	0.290×10^{-5}kg·m²

● Motor specification

AC servomotor used		SGMAV-01A
Rated torque		0.318N·m
Motor inertia	J_M	0.380×10^{-5}kg·m²

● Calculation of torque required for acceleration

・Applied torque T_L

$$T_L=T_S+\mu Wg\cdot\frac{\ell}{2\pi\eta}$$
$$=0.08+0.01\times30\times9.8\times\frac{0.01}{2\times\pi\times0.9}$$
$$\fallingdotseq0.09\text{N·m}$$

・Acceleration torque T_a

$$J_L=W\cdot\left(\frac{\ell}{2\pi}\right)^2$$
$$=30\times\left(\frac{0.01}{2\times\pi}\right)^2\fallingdotseq7.60\times10^{-5}\text{kg·m}^2$$
$$N=V\times\frac{60}{\ell}=0.3\times\frac{60}{0.01}=1800\text{min}^{-1}$$
$$T_a=(J_T+J_M+J_C+J_L)\cdot\frac{2\pi N}{60t_a}$$
$$=(0.93+0.380+0.290+7.60)\times10^{-5}\times\frac{2\times\pi\times1800}{60\times0.2}$$
$$\fallingdotseq0.09\text{N·m}$$

・Torque required for acceleration T_P

$$T_P=T_L+T_a=0.09+0.09=0.18\text{N·m}$$

At this point, check that the $T_P\times k$ (factor of safety) is smaller than motor's output torque T_M.
If this value is exceeded, review the maximum speed and acceleration / deceleration time.
For the operation pattern under consideration, it is smaller than the output torque T_M as indicated below.

$$T_M=0.318\times3\fallingdotseq0.95\text{N·m}$$
$$T_P\times k=0.18\times1.3=0.23\text{N·m}<T_M$$

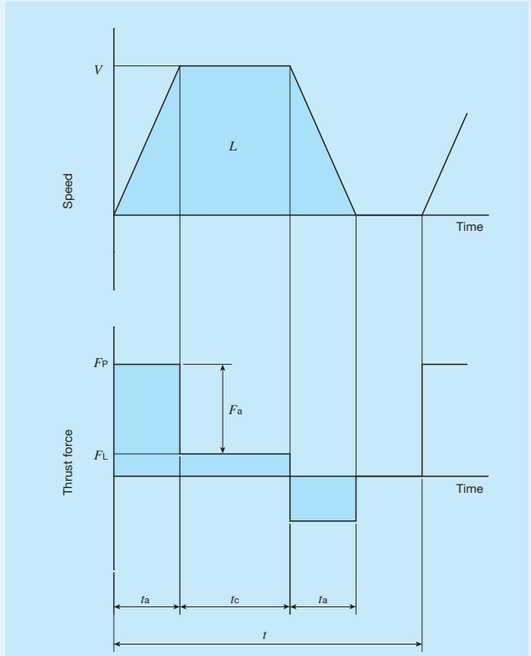
● Consideration of effective torque
・Effective torque T_{rms}

$$T_{rms}=\sqrt{\frac{T_P^2\times t_a+(T_P-2\times T_L)^2\times t_a+T_L^2\times t_c}{t}}$$
$$=\sqrt{\frac{0.23^2\times0.2+(0.23-2\times0.09)^2\times0.2+0.09^2\times0.8}{2.0}}$$
$$\fallingdotseq0.09\text{N·m}$$

As motor's rated torque is larger than the effective torque T_{rms}, it can be judged that continuous operation in the operation pattern under consideration is possible.

In case of linear motor drive

The effective thrust force may exceed the rated thrust depending on the operation rate of Linear Motor Table, leading to motor overheating and seizure that may cause breakage and human injury. Before operations, ensure that the effective thrust force is below the rated thrust.
Described below is an example of consideration of operation pattern with LT170HS. Temporarily set the operation pattern as indicated below considering the carrying mass and acceleration from the dynamic load mass chart in page Ⅱ-288.



Setting items

Table specification	Model		LT170HS (natural air cooling)
	Mass of moving table	W_T	4.0kg See page Ⅱ-303
	Maximum thrust at traveling speed V	F_M	About 550N See page Ⅱ-288
	Running resistance	F_R	See [In case of LT⋯H] in the section of calculation of marginal acceleration time.
	Speed coefficient	f_V	
Carrying mass		W_L	30kg
Traveling distance		L	1.2m
Traveling speed (set speed)		V	1.5m/s
Time		t_a	0.3s
		t_c	0.5s
		t	2.5s
Cord pull-resistance		F_C	1.0N Expected value
Factor of safety		k	1.3
Ambient temperature			30℃

STEP1 Calculation of thrust force required for acceleration

①Force from running resistance F_L

$$F_L=f_V\times F_R+F_C=2.25\times40+1=91\text{N}$$

②Force from acceleration F_a

$$F_a=(WL+WT)\cdot\frac{V}{t_a}$$
$$=(30+4.0)\times\frac{1.5}{0.3}=170\text{N}$$

③Thrust force required for acceleration F_P

$$F_P=F_a+F_L$$
$$=170+91=261\text{N}$$

At this point, check that the $F_P\times k$ (factor of safety) is below the thrust characteristics curve in page Ⅱ-288. If this value is exceeded, review the maximum speed for operating pattern and acceleration / deceleration time.
You can see in the example pattern that it is below the thrust characteristics curve.
Maximum thrust F_M at 1.5m/s=About 550N

$$F_P\times k=261\times1.3=339.3\text{N}<F_M$$

STEP2 Consideration of effective thrust force

・Effective thrust force F_{rms} can be obtained as follows.

$$F_{rms}=\sqrt{\frac{F_P^2\times t_a+(F_P-2\times F_L)^2\times t_a+F_L^2\times t_c}{t}}$$
$$=\sqrt{\frac{261^2\times0.3+(261-2\times91)^2\times0.3+91^2\times0.5}{2.5}}$$
$$\fallingdotseq103\text{N}$$

At this point, check that F_{rms} is below the rated thrust. If the rated thrust is exceeded, review the maximum speed for operating pattern and acceleration / deceleration time. (For LT⋯H, thrust characteristics vary depending on ambient temperature. See the rated thrust characteristics diagram.)

For the example pattern, the rated thrust is about 117N at the ambient temperature of 30℃, so the value is 103N< 117N (rated thrust) and it can be judged that continuous operation is possible.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

In case of Alignment Stage SA

The effective thrust force may exceed the rated thrust (or the effective torque exceeds the rated torque) depending on the operation rate of Alignment Stage SA, leading to motor overheating and seizure that may cause breakage and human injury. Before operations, ensure that the effective thrust force is below the rated thrust (or the effective torque is below the rated torque).
Described below is an example of consideration of operation pattern with Alignment Stage SA120DE/XYS.
Temporarily set an operation pattern as indicated below considering the marginal acceleration time.

Setting items

Table model			SA120DE/XYS
Load mass		W_L	5.0kg
Inertia moment of load		J_L	1.0×10^{-2}kg·m²
X-axis operation pattern	Mass of moving table	W_T	5.9kg
	Set stroke	L	0.01m
	Maximum speed	V	0.1m/s
	Acceleration/deceleration time	t_a	0.05s
	Constant speed traveling time	t_c	0.05s
	Cycle time	t	0.4s
	Cord pull-resistance	F_c	1.0N
Y-axis operation pattern	Mass of moving table	W_T	3.4kg
	Set stroke	L	0.01m
	Maximum speed	V	0.1m/s
	Acceleration / deceleration time	t_a	0.05s
	Constant speed traveling time	t_c	0.05s
	Cycle time	t	0.4s
	Cord pull-resistance	F_c	1.0N
θ-axis operation pattern	Inertia moment of moving table	J_T	2.0×10^{-3}kg·m²
	Set operating angle	L	0.1πrad
			18°
	Maximum speed	R	πrad/s
			180°/s
	Acceleration/deceleration time	t_a	0.05s
	Constant speed traveling time	t_c	0.05s
	Cycle time	t	0.4s
	Cord pull-resistance	M_c	0.0N·m
Factor of safety		k	1.3

STEP1 Calculation of thrust force required for X-axis acceleration

①Force from running resistance F_L

$F_L=F_f+F_c=3.0+1.0=4.0$N

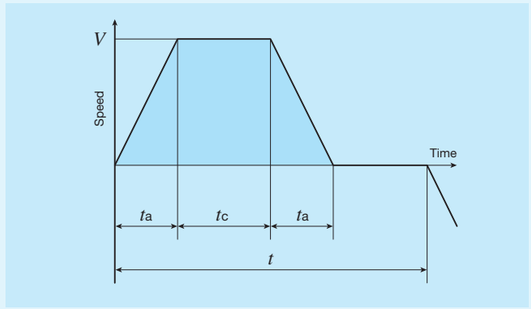
②Force from acceleration F_a

$$F_a=(W_L+W_T)\cdot\frac{V}{t_a}$$
$$=(5.0+5.9)\times\frac{0.1}{0.05}=21.8\text{N}$$

③Thrust force required for acceleration F_P

$F_P=F_a+F_L$
$=21.8+4.0=25.8$N

At this point, check that the $F_P\times k$ (factor of safety) is below the maximum thrust in page Ⅱ-264. If this value is exceeded, review the maximum speed for operating pattern and acceleration / deceleration time.
You can see in the example pattern that it is below the maximum thrust.
The maximum thrust F_M of SA120DE/X=70N
$F_P\times k=25.8\times1.3=33.54\text{N}<F_M$



STEP2 Consideration of effective thrust force

・Effective thrust force F_{rms} can be obtained as follows.

$$F_{rms}=\sqrt{\frac{F_P^2\times t_a+(F_P-2\times F_L)^2\times t_a+F_L^2\times t_c}{t}}$$
$$=\sqrt{\frac{25.8^2\times0.05+(25.8-2\times4.0)^2\times0.05+4.0^2\times0.05}{0.4}}$$
$$\fallingdotseq11.17\text{N}$$

At this point, check that F_{rms} is below the rated thrust. If the rated thrust is exceeded, review the maximum speed for operating pattern and acceleration / deceleration time. In the example pattern, it can be judged that continuous operation is possible.

STEP3 Consideration of thrust force and effective thrust force required for Y-axis acceleration

Perform the same calculation as X-axis.
If the operation pattern is the same, the condition is lighter for Y-axis as its mass of moving table is smaller. So that is omitted in this example.

STEP4 Consideration of torque required for θ-axis acceleration

①Torque from rotation resistance M_L

$M_L=M_f+M_c$
$=0.1+0.0=0.1$N·m

②Torque from acceleration M_a

$$M_a=(J_L+J_T)\cdot\frac{R}{t_a}$$
$$=(0.01+0.002)\times\frac{\pi}{0.05}\fallingdotseq0.754\text{N·m}$$

③Torque required for acceleration M_P

$M_P=M_a+M_L$
$=0.754+0.1=0.854$N·m

At this point, check that the $M_P\times k$ (factor of safety) is below the maximum torque in page Ⅱ-264. If this value is exceeded, review the maximum speed for operating pattern and acceleration / deceleration time. You can see in the example pattern that it is below the maximum torque.

Maximum torque M_M of SA120DE/S=2.0N·m
$M_P\times k=0.854\times1.3\fallingdotseq1.11\text{N·m}<M_M$

STEP5 Consideration of effective torque

・Effective torque M_{rms} can be obtained as follows.

$$M_{rms}=\sqrt{\frac{M_P^2\times t_a+(M_P-2\times M_L)^2\times t_a+M_L^2\times t_c}{t}}$$
$$=\sqrt{\frac{0.854^2\times0.05+(0.854-2\times0.1)^2\times0.05+0.1^2\times0.05}{0.4}}$$
$$\fallingdotseq0.38\text{N·m}$$

At this point, check that M_{rms} is below the rated torque. If the rated torque is exceeded, review the maximum speed for operating pattern and acceleration / deceleration time. In the example pattern, it can be judged that continuous operation is possible.

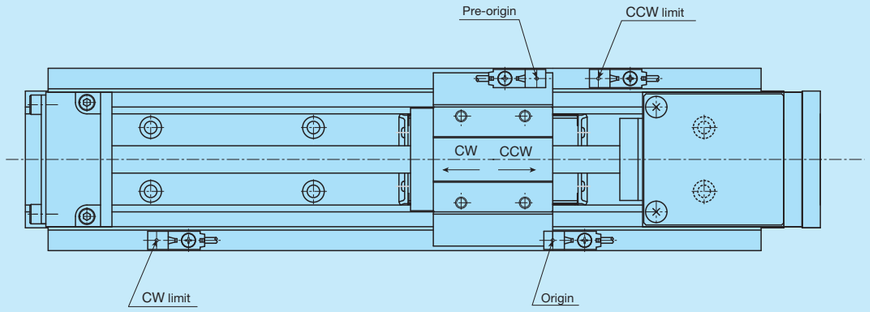
※Caution If the load is offset from the rotation center, X- and Y-axis acceleration / deceleration generates torque load on the θ-axis. So extra care must be exercised.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

Sensor Specification

Precision positioning table is equipped with CW and CCW limit sensors for overrun prevention and pre-origin and origin sensors for machine origin detection. For some table models, these sensors are provided as standard equipment, and for the other models, mounting is specified by identification numbers.
Types of sensors used for Precision positioning table are listed in Table 1 and specifications of each sensor in Table 2 to 4. For connector specifications for NT···V, RT and TM, see Table 5.1 to 5.3. For other tables, wires are unbound, so that the sensor output connector and mating-side must be prepared separately by customer.
For sensor timing chart, please see section of sensor specifications of each model. In addition, unless otherwise stated, sensor positions can be fine-adjusted. Please make adjustment on your own.

Table 1 Sensor types



A mark tube with engraved signal name (ORG, PORG, CW or CCW) is inserted into the unbound-wire specification sheath.

Table model \ Sensor		CW limit	CCW limit	Pre-origin（PORG）	Origin（ORG）
TE···B(1)		Proximity sensor	Proximity sensor	Proximity sensor	Proximity sensor
TU(1)		Proximity sensor	Proximity sensor	Proximity sensor	Proximity sensor
TSL···M		Proximity sensor	Proximity sensor	Proximity sensor	Photo sensor ④(2)
TSLH···M・CTLH···M		Photo sensor ③	Photo sensor ③	Photo sensor ③	Photo sensor ④(2)
TX···M・CTX···M		Photo sensor ③	Photo sensor ③	Photo sensor ③	Photo sensor ④(2)

NT···V(1)		Proximity sensor	Proximity sensor	Proximity sensor	Encoder(3)(5)
RT(1)		Photo sensor ③	Photo sensor ③	Photo sensor ③	Encoder(3)(5)
AT		Proximity sensor(5)	Proximity sensor(5)	–	–
AM		Proximity sensor	Proximity sensor	Proximity sensor	–(2)
SA···DE		Internal sensor(3)(5)	Internal sensor(3)(5)	Internal sensor(3)(5)	Encoder(3)(5)
TZ		Proximity sensor(5)	Proximity sensor(5)	Proximity sensor(5)	Proximity sensor(2)(5)

Notes (1) Mounting a sensor is specified using the corresponding identification number. For the other models, sensors are equipped as standard equipment.
(2) No origin sensor is provided if an attachment for AC servomotor or linear encoder is selected. Use C phase or Z phase signal of AC servomotor or linear encoder to be installed on your own. For AM, only AC servomotor is selected.
(3) Each signal is output from applicable dedicated programmable control unit or dedicated driver.
(4) Sensors are built in the table and each signal is output from a dedicated sensor amplifier. When the AC servomotor is used, use encoder's C phase for origin signals.
(5) Sensor positions cannot be fine-adjusted.
(6) This is built in the substrate.

Table 2 Photo sensor specifications

Item \ Sensor	Limit, pre-origin and origin

Mounting

■ Processing accuracy of mounting surface

Accuracy and performance of Precision positioning table are affected by accuracy of mating mounting surface. Therefore, processing accuracy of the mounting surface must be considered according to usage conditions such as required motion performance and positioning accuracy.
Reference flatness of the mating mounting surface under general usage conditions is indicated in Table 6.
In addition, the base on which a table is mounted receives a large reactive force, so take enough care about the rigidity of the base.

Table 6 Accuracy of mounting surface unit: μm

Model	Flatness of the mounting surface
NT···H	5
TX TM	8
TS/CT NT···V NT···XZ NT···XZH SA···DE	10
TSLH···M	15
TE···B TU TSL···M TC···EB LT AM	30
TSLB	50

■ Tightening torque for fixing screw

Typical tightening torque to fix the Precision positioning table is indicated in Table 7. If sudden acceleration / deceleration occurs frequently or moment is applied, it is recommended to tighten them to 1.3 times higher torque than that indicated in the table. In addition, when high accuracy is required with no vibration and shock, it is recommended to tighten the screws to torque smaller than that indicated in the table and use adhesive agent to prevent looseness of screws.

Table 7 Screw tightening torque unit: N·m

Bolt size	Female thread component		
	Steel	Aluminum alloy	
			With helisert
M2 ×0.4	0.31	About 60% of steel value	About 80% of steel value
M3 ×0.5	1.7		
M4 ×0.7	4.0		
M5 ×0.8	7.9		
M6 ×1	13.3		
M8 ×1.25	32.0		
M10×1.25	62.7		

Note (1) As tightening torque for NT···V, 1.1N·m is recommended.

Precaution for Use

■ Safety precautions

- Be sure to earth the ground terminal (The grounding resistance is 100Ω or less.). It may lead to electric shock and fire.
- Use only the power voltage indicated on the device. Otherwise, it may lead to fire and malfunction.
- Do not touch any electrical component with wet hand. It may lead to electric shock.
- Do not bend forcibly, twist, pull, heat or apply heavy load on the cord. It may lead to electric shock and fire.
- Do not put your finger into any opening during table operations. It may lead to injury.
- Do not touch any moving part during table operations. It may lead to injury.
- When removing the electrical component cover, be sure to turn the power off and disconnect the power plug. It may lead to electric shock.
- Do not touch the terminal for 5 minutes after shutting down the power. Otherwise, electric shock due to residual voltage may occur.
- When installing / removing the connection terminal, be sure to turn the power off and disconnect the power plug in advance.Otherwise, it may lead to electric shock and fire.

■ Precaution for Use

- As precision positioning table is a precision machine, excessive load or shock may impair accuracy and damage the parts. Take extra care when handling it.
- Check that the table mounting surface is free from dust and harmful projection.
- Use it in a clean environment where it is not exposed to water, oil and dust particles.
- As grease is applied to the linear motion rolling guide integrated with precision positioning table and ball screws, take dust protection measures to prevent dust and other foreign matters from entering into the unit. If foreign matters get mixed, thoroughly eliminate the contaminated grease and apply clean grease again.
- Though lubrication frequency for precision positioning table varies depending on usage conditions, wipe off old grease and apply clean grease again biannually for normal cases or every three months for applications with constant reciprocating motions in long distance. In addition, the Precision Positioning Table in which C-Lube is built delivers long-term maintenance free performance. This reduces the need for the lubrication mechanism and workload which used to be necessary for linear motion rolling guides and ball screws, allowing large-scale reduction of maintenance cost.
- As precision positioning table is assembled through precise processing and adjustments, do not disassemble or alter it.
- Linear motor drive products have strong magnets inside. Note that any magnetic object around such product may be attracted. For use around any device vulnerable to magnetism, please contact IKO.
- Linear motor drive products require parameter settings of programmable control unit or driver for driving. Securely configure parameter settings suitable for the drive motor.
- For Linear Motor Table LT series, motor cord, etc. is connected to moving table, so a space for wiring of cord must be ensured in addition to the installation space for the main body. In addition, arrange cord wiring with sufficient curvature so that the running resistance does not increase or no excessive force is applied.

◎ The external appearance / specifications of this product can be modified for improvements without notices.

1N=0.102kgf=0.2248lbs.
1mm=0.03937inch

IKO Introduction of Technical Service Site

"IKO Technical Service Site" can be accessed from our home page IKO. The site also distributes various tools, etc., to select Linear Ways / Linear Roller Ways, and please utilize the site for the assistance to select products. Additionally the site also provides CAD data and product catalog of Needle Series, Linear Motion Rolling Guide Series and Mechatronics Series for you to download. Please consider to use for enhancing your design efficiency.

http://www.ikont.co.jp/eg/

1. Technical Calculations

For Linear Way/Linear Roller Way load and life calculation, you can obtain the calculated load and the rating life by entering the operating conditions. Also you can derive the motor torque required for operation and the effective thrust force during operation in the sections of motor torque calculation and calculation of effective thrust force of linear motor tables respectively, and output the calculation results in PDF format, as well as save the histories.

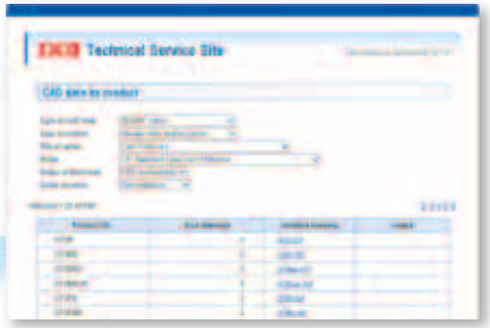
2. Selection of Identification Number

By selecting such specification as model code, dimensions, part code, material code, preload symbol, classification symbol, interchangeable code and supplemental code of Linear Ways / Linear Roller Ways, you can easily specify the identification number used for ordering.
Also you can browse the CAD data of the selected products, calculate the load, and output the selection results in PDF format, as well as save the histories.

3. Downloading CAD Data

2-dimensional CAD data (DXF file)

There are two types of figures, brief figure and detailed figure. The brief figure shows only the external view lines, and the detailed figure shows the detailed lines. The drawing consists of three drawings: front view, side view and plain view. The scale shows only the original size (1:1), and it does not show dimension lines.



3-dimensional CAD data

It is linked to the mechanical parts CAD library "PART community". Entering the rail dimension and option contents to the detail, you can view the 2D / 3D CAD data suitable for the specification for free of charge.

4. Downloading Catalog and Operation Manual

You can download product catalogs of needle series, linear motion rolling guide series and mechatronics series, operation manuals of precision positioning tables in PDF format.
For a brochure version of the catalogs, please ask from IKO home page, or Contact the nearest branch or sales office.

Oil Minimum

IKO Gentle to The Earth

Nippon Thompson Co., Ltd. is working to develop global environment-friendly products.
It is committed to developing products that make its customers' machinery and equipment more reliable, thereby contributing to preserving the global environment.
This development stance manifests well in the keyword "**Oil Minimum.**"
Our pursuit of Oil Minimum has led to the creation of
IKO's proprietary family of lubricating parts as "C-Lube."

- IKO Linear Motion Rolling Guides are manufactured through a control system that alleviates their impact on the global environment to meet the quality requirements of ISO 14001 in compliance with the quality requirements level of ISO 9001 for quality improvement.
- The standard products listed in this catalog comply with the specifications of the six hazardous materials mentioned cited in the European RoHS Directive.

IKO Products Underpin Sustain Technology Leaps

Nippon Thompson Co., Ltd. was the first Japanese manufacturer to develop needle bearings on its own and has since expanded into the arena of linear motion rolling guides (Linear Motion Series and Mechatro Series) on the support of its advanced expertise. The company now offers a vast assortment of ingenious products, including the world's first C-Lube maintenance-free series, to address increasingly diversified customer needs and thus sustain technology leaps.

C-Lube Maintenance-Free Series Products Evolving from the "Oil Minimum" Concept

We have developed lubricating parts impregnated with a large amount of lubricant as C-Lube Series to save the customer's oiling management workload and built them into bearings and linear motion rolling guides.
The C-Lube Series not only keeps products maintenance-free for long by giving them an optimal and minimal amount of a lubricant for an extended period of time but also contributes greatly to preserving the global environment.
